

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

P R E F A C E .

WRITTEN HISTORY is generally too scholastic to interest the multitude. Dignified and formal, it deals mainly in great events, and of those imperfectly, because not pausing to present clear impressions by the associations of individual life. It is these that lend to written fiction its greatest charm, and attract the multitude by appearing more like truth. Although untrue in the particular combinations, scenes and plots delineated, yet well written fiction is drawn from Nature, from experience; and these facts in life, as with chessmen, are only arranged in new, but natural positions.

History includes everything in Nature, Character, Customs, and Incidents, both general and individual, that contributes to originate what is peculiar in a People, or what causes either their advancement or decline. So broad its scope that scarcely anything is too remote for its grasp; so searching, scarcely anything too minute. Were written History a clear transcript of all that properly comes within the province of History, it would be more enticing than the most fascinating fiction. But it being otherwise, the multitude prefer well written fiction, which touches the heart and arouses all the sympathies of man by its vivid pictures of actual life.

Herein are given, in the language of a great variety of writers, not only the great events in the History and condition of the West, but in illustration the minute matters of individual experience and observation, without which the other is, in a measure, untruthful, because it fails by its incompleteness to impart correct impressions. The materials are arranged in chronological order, and the sources from whence they are derived are presented on another leaf.

PREFACE TO THE ENLARGED EDITION.

"THE GREAT WEST" was first published in the year 1851, and at once gained a wide-spread and unexpected popularity. It appears to have met a great public want, as has been shown by the extraordinary sale of more than eighty thousand copies — a number which has been rarely reached by any American historical work. As in the interval many important changes have taken place in the West, the book has been remodeled and the current of events brought down to the present time, so that the reader now has it in an enlarged and improved form.

"The Great West" has become a standard work, and will probably in future editions instruct and interest multitudes long after the present generation shall have passed away.

HISTORICAL SKETCH

OF THE

WEST.

TWENTY years after the great event occurred, which has immortalized the name of Christopher Columbus, Florida was discovered by Juan Ponce de Leon, ex-governor of Porto Rico. Sailing from that island in March, 1512, he discovered an unknown country, which he named Florida, from the abundance of its flowers, the trees being covered with blossoms, and its first being seen on Easter Sunday, a day called by the Spaniards *Pascua Florida*; the name imports the country of flowers. Other explorers soon visited the same coast. In May, 1539, Ferdinand de Soto, the Governor of Cuba, landed at Tampa Bay, with six hundred followers. He marched into the interior; and on the 1st of May, 1541, discovered the Mississippi; being the first European who had ever beheld that mighty river.

Spain for many years claimed the whole of the country—bounded by the Atlantic to the Gulf of St. Lawrence on the north, all of which bore the name of Florida. About twenty years after the discovery of the Mississippi, some Catholic missionaries attempted to form settlements at St. Augustine, and its vicinity; and a few years later a colony of French Calvinists had been established on the St. Mary's, near the coast. In 1565, this settlement was annihilated by an expedition from Spain, under Pedro Melendez de Aviles; and about nine hundred French, men, women and children, cruelly massacred. The bodies of many of the slain were hung from trees, with the inscription, "*Not as Frenchmen, but as heretics.*" Having accomplished his bloody errand, Melendez founded St. Augustine, the oldest town by half a century of any now in the Union. Four years after, Dominic de Gourges, burning to avenge his countrymen, fitted out an expedition at his own expense, and surprised the Spanish colonists on the St. Mary's; destroying the ports, burning the houses, and ravaging the settlements with fire and sword; finishing the work by also suspending some of the corpses of his enemies from trees, with the inscription,

"Not as Spaniards, but as murderers." Unable to hold possession of the country, de Gourgues retired to his fleet. Florida, excepting for a few years, remained under the Spanish crown, suffering much in its early history, from the vicissitudes of war and piratical incursions, until 1819, when, vastly diminished from its original boundaries, it was ceded to the United States, and in 1845 became a State.

In 1535, James Cartier, a distinguished French mariner, sailed with an exploring expedition up the St. Lawrence, and taking possession of the country in the name of his king, called it "New France." In 1608, the energetic Champlain created a nucleus for the settlement of Canada, by founding Quebec. This was the same year with the settlement of Jamestown, Virginia, and twelve years previous to that on which the Puritans first stepped upon the rocks of Plymouth.

To strengthen the establishment of French dominion, the genius of Champlain saw that it was essential to establish missions among the Indians. Up to this period "the far west" had been untrod by the foot of the white man. In 1616, a French Franciscan, named Le Caron, passed through the Iroquois and Wyandot nations—to streams running into Lake Huron; and in 1634, two Jesuits founded the first mission in that region. But just a century elapsed from the discovery of the Mississippi, ere the first Canadian envoys met the savage nations of the northwest at the falls of St. Mary's, below the outlet of Lake Superior. It was not until 1659 that any of the adventurous fur-traders wintered on the shores of this vast lake, nor until 1660 that Rene Mesnard founded the first missionary station upon its rocky and inhospitable coast. Perishing soon after in the forest, it was left to Father Claude Allouez, five years subsequent, to build the first permanent habitation of white men among the Northwestern Indians. In 1668, the mission was founded at the falls of St. Mary's, by Dablon and Marquette; in 1670, Nicholas Perrot, agent for the intendant of Canada, explored Lake Michigan to near its southern termination. Formal possession was taken of the northwest by the French in 1671, and Marquette established a missionary station at Point St. Ignace, on the mainland north of Mackinac, which was the first settlement in Michigan.

Until late in this century, owing to the enmity of the Indians bordering the Lakes Ontario and Erie, the adventurous missionaries, on their route west, on pain of death, were compelled to pass far to the north, through "a region horrible with forests," by the Ottawa and French Rivers of Canada.

As yet no Frenchman had advanced beyond Fox River, of Winnebago Lake, in Wisconsin; but in May, 1673, the missionary Marquette, with a few companions, left Mackinac in canoes; passed up Green Bay, entered Fox River, crossed the country to the Wisconsin, and, following its current, passed into and discovered the Mississippi; down which they sailed several hundred

miles, and returned in the Autumn. The discovery of this great river gave great joy to New France, it being "a pet idea" of that age that some of its western tributaries would afford a direct route to the South Sea, and thence to China. Monsieur La Salle, a man of indefatigable enterprise, having been several years engaged in the preparation, in 1682, explored the Mississippi to the sea, and took formal possession of the country in the name of the King of France, in honor of whom he called it Louisiana. In 1685, he also took formal possession of Texas, and founded a colony on the Colorado; but La Salle was assassinated, and the colony dispersed.

The descriptions of the beauty and magnificence of the Valley of the Mississippi, given by these explorers, led many adventurers from the cold climate of Canada to follow the same route, and commence settlements. About the year 1680, Kaskaskia and Cahokia, the oldest towns in the Mississippi Valley, were founded. Kaskaskia became the capital of the Illinois country, and in 1721, a Jesuit college and monastery were founded there.

A peace with the Iroquois, Hurons and Ottawas, in 1700, gave the French facilities for settling the western part of Canada. In June, 1701, De la Motte Cadillac, with a Jesuit missionary and a hundred men, laid the foundation of Detroit. All of the extensive region south of the lakes was now claimed by the French, under the name of Canada, or New France. This excited the jealousy of the English, and the New York legislature passed a law for hanging every Popish priest that should come voluntarily into the province. The French, chiefly through the mild and conciliating course of their missionaries, had gained so much influence over the western Indians, that, when a war broke out with England, in 1711, the most powerful of the tribes became their allies; and the latter unsuccessfully attempted to restrict their claims to the country south of the lakes. The Fox nation, allies of the English, in 1713, made an attack upon Detroit; but were defeated by the French and their Indian allies. The treaty of Utrecht, this year, ended this war.

By the year 1720, a profitable trade had arisen in furs and agricultural products — between the French of Louisiana and those of Illinois; and settlements had been made on the Mississippi, below the junction of the Illinois. To confine the English to the Atlantic coast, the French adopted the plan of forming a line of military posts, to extend from the great northern lakes to the Mexican Gulf, and as one of the links of the chain, Fort Chartres was built on the Mississippi, near Kaskaskia; and in its vicinity soon flourished the villages of Cahokia and Prairie du Rocher.

The Ohio at this time was but little known to the French, and on their early maps was but an insignificant stream. Early in this century their missionaries had penetrated to the sources of the Alleghany. In 1721, Joncaire, a French agent and trader, established himself among the Senecas at Lewistown, and Fort Niagara was erected, near the falls, five years subsequent. In 1735, accord-

ing to some authorities, Post St. Vincent was erected on the Wabash. Almost coeval with this, was the military post of Presque Isle, on the site of Erie, Pennsylvania, and from thence a cordon of posts extended on the Alleghany to Pittsburgh; and from thence down the Ohio to the Wabash.

A map, published at London in 1755, gives the following list of French posts, as then existing in the west: Two on French Creek, in the vicinity of Erie, Pennsylvania; Duquesne, on the site of Pittsburgh; Miamis, on the Maumee, near the site of Toledo; Sandusky, on Sandusky Bay; St. Joseph's, on St. Joseph's River, Michigan; Ponchartrain, site of Detroit; Massillimacinac; one on Fox River, Green Bay; Crevecoeur, on the Illinois; Rockfort, or Fort St. Louis, on the Illinois; Vincennes; Cahokia; Kaskaskia, and one at each of the mouths of the Wabash, Ohio, and Missouri. Other posts, not named, were built about that time. On the Ohio, just below Portsmouth, are ruins, supposed to be those of a French fort; as they had a post there during Braddock's war.

In 1749, the French regularly explored the Ohio, and formed alliances with the Indians in Western New York, Pennsylvania, and Virginia. The English, who claimed the whole west to the Pacific, but whose settlements were confined to the comparatively narrow strip east of the mountains, were jealous of the rapidly increasing power of the French in the west. Not content with exciting the savages to hostilities against them, they stimulated private enterprise by granting six hundred thousand acres of choice land on the Ohio, to the "Ohio Company."

By the year 1751, there were in the Illinois country, the settlements of Cahokia, five miles below the site of St. Louis; St. Philip's, forty-five miles farther down the river; St. Genevieve, a little lower still, and on the east side of the Mississippi, Fort Chartres, Kaskaskia, and Prairie du Rocher. The largest of these was Kaskaskia, which at one time contained nearly three thousand souls.

In 1748, the Ohio Company, composed mainly of wealthy Virginians, dispatched Christopher Gist to explore the country, gain the good-will of the Indians, and ascertain the plans of the French. Crossing overland to the Ohio, he proceeded down it to the Great Miami, up which he passed to the towns of the Miamies, about fifty miles north of the site of Dayton. The next year the company established a trading post in that vicinity, on Loramies Creek, the first point of English settlement in the western country; it was soon after broken up by the French.

In the year 1753, Dinwiddie, Governor of Virginia, sent George Washington, then twenty-one years of age, as commissioner, to remonstrate with the French commandant who was at Fort le Boeuf, near the site of Erie, Pennsylvania, against encroachments of the French. The English claimed the country by virtue of her first royal charters; the French by the stronger title of discovery and possession. The result of the mission proving unsatisfactory, the English, although it was a time of peace, raised a force to

expel the invaders from the Ohio and its tributaries. A detachment under Lieut. Ward erected a fort on the site of Pittsburgh; but it was surrendered shortly after, in April, 1754, to a superior force of French and Indians under Contrecoeur, and its garrison peaceably permitted to retire to the frontier post of Cumberland. Contrecoeur then erected a strong fortification at "the fork," under the name of Fort Duquesne.

Measures were now taken by both nations for the struggle that was to ensue. On the 28th of May, a strong detachment of Virginia troops, under Washington, surprised a small body of French from Fort Duquesne, killed its commander, M. Jumonville, and ten men, and took nearly all the rest prisoners. He then fell back and erected Fort Necessity, near the site of Uniontown. In July he was attacked by a large body of French and Indians, commanded by M. Villiers, and after a gallant resistance, compelled to capitulate with permission to retire unmolested, and under the express stipulation that farther settlements or forts should not be founded by the English, west of the mountains, for one year.

On the 9th of July, 1755, Gen. Braddock was defeated within ten miles of Fort Duquesne. His army, composed mainly of veteran English troops, passed into an ambushade formed by a far inferior body of French and Indians, who, lying concealed in two deep ravines, each side of his line of march, poured in upon the compact body of their enemy volleys of musketry, with almost perfect safety to themselves. The Virginia provincials, under Washington, by their knowledge of border warfare and cool bravery, alone saved the army from complete ruin. Braddock was himself mortally wounded by a provincial named Fausett. A brother of the latter had disobeyed the silly orders of the general, that the troops should not take positions behind the trees, when Braddock rode up and struck him down. Fausett, who saw the whole transaction, immediately drew up his rifle and shot him through the lungs; partly from revenge, and partly as a measure of salvation to the army which was being sacrificed to his headstrong obstinacy and inexperience.

The result of this battle gave the French and Indians a complete ascendancy on the Ohio, and put a check to the operations of the English, west of the mountains, for two or three years. In July, 1758, Gen. Forbes, with seven thousand men, left Carlisle, Penn., for the west. A corps in advance, principally of Highland Scotch, under Major Grant, were on the 13th of September defeated in the vicinity of Fort Duquesne, on the site of Pittsburgh. A short time after, the French and Indians, under Col. Boquet, made an unsuccessful attack upon the advanced guard.

In November, the commandant of Fort Duquesne, unable to cope with the superior force approaching under Forbes, abandoned the fortress, and descended to New Orleans. On his route, he erected Fort Massac, so called in honor of M. Massac, who superintended its construction. It was upon the Ohio, within forty

within the limits of Illinois. Forbes repaired Fort Mifflin, and changed its name to Fort Pitt, in honor of the English Prime Minister.

The English were now for the first time in possession of the upper Mississippi. In the spring, they established several posts in that region, among which was Fort Burd, or Redstone Old Fort, at the site of Brownsville.

On account of the treachery of Gov. Lyttleton, in 1760, by which, twenty-two Cherokee chiefs on an embassy of peace were made prisoners at Fort George, on the Savannah, that nation flew to arms, and for a while desolated the frontiers of Virginia and the Carolinas. Fort Loudon, in East Tennessee, having been besieged by the Indians, the garrison capitulated on the 7th of August, and on the day afterward, while on the route to Fort George, were attacked, and the greater part massacred. In the summer of 1761, Col. Grant invaded their country, and compelled them to sue for peace. On the north the most brilliant success had attended the British arms. Ticonderoga, Crown Point, and Fort Niagara, and Quebec were taken in 1759, and the next year Montreal fell, and with it all of Canada.

By the treaty of Paris in 1763, France gave up her claim to New France and Canada, embracing all the country east of the Mississippi river as far north as the Bay of Herveille. The remainder of her Mississippi possessions, embracing Louisiana west of the Mississippi and the island of Orleans, she soon after secretly ceded to Spain, which transferred the dominion of France on this continent, and her vast Indian empire.

At this period the Lower Mississippi had become of considerable importance. The French colony on the Gulf of Mexico, by Jeanne D'Herveille, a brave Frenchman, was increased to 1767, by Jeanne D'Herveille, a brave Frenchman. He built forts at the mouth of the Mississippi, both of which were deserted in the year 1767. For many years was the headquarters for the French colony on the Gulf of Mexico, at the mouth of the Mississippi, which latter became the chief port of the French colony.

The French colony on the Gulf of Mexico was but little more than a trading post, and trading in furs, rather than in agriculture, allured the colonists; and in the course of time, Biloxi was a Frenchman, and a Frenchman poor. Bienville, who was at the fort on the Gulf of Mexico, and his soldiers were liable to be attacked by mosquitoes, frogs,

and a Frenchman, of vast wealth, and the exclusive

right of commerce for sixteen years. But in 1717, the speculation having resulted in his ruin, and to the injury of the colonists, he surrendered his privileges. Soon after, a number of other adventurers, under the name of the Mississippi Company, obtained from the French government a charter, which gave them all the rights of sovereignty, except the bare title, including a complete monopoly of the trade, and the mines. Their expectations were chiefly from the mines; and on the strength of a former traveler, Nicholas Perrot, having discovered a copper mine in the valley of St. Peters, the directors of the company assigned to the soil of Louisiana, silver and gold; and to the mud of the Mississippi, diamonds and pearls. The notorious Law, who then resided at Paris, was the secret agent of the company. To form its capital, its shares were sold at five hundred livres each; and such was the speculating mania of the times, that in a short time more than a hundred millions were realized. Although this proved ruinous to individuals, yet the colony was greatly benefited by the consequent emigration, and agriculture and commerce flourished.

In 1719, *Renault*, an agent of the Mississippi Company, left France with about two hundred miners and emigrants, to carry out the mining schemes of the company. He bought five hundred slaves at St. Domingo, to work the mines, which he conveyed to Illinois in 1720. He established himself a few miles above Kaskasia, and founded there the village of St. Philips. Extravagant expectations existed in France, of his probable success in obtaining gold and silver. He sent out exploring parties in various sections of Illinois and Missouri. His explorations extended to the banks of the Ohio and Kentucky rivers, and even to the Cumberland valley in Tennessee, where at "French Lick," on the site of Nashville, the French established a trading post. Although Renault was woefully disappointed in not discovering extensive mines of gold or silver, yet he made various discoveries of lead; among which were the mines north of Potosi, and those on the St. Francois. He eventually turned his whole attention to the smelting of lead, of which he made considerable quantities, and shipped to France. He remained in the country until 1744. Nothing of consequence was again done in mining, until after the American Revolution.

In 1718, Bienville laid out the town of New Orleans, on the plan of Rochefort, France. Some four years after, the bankruptcy of Law threw the colony into the greatest confusion, and occasioned wide-spread ruin in France, where speculation had been carried to an extreme unknown before.

The expenditures for Louisiana, were consequently stopped, but the colony had now gained strength to struggle for herself. Louisiana was then divided into nine cantons, of which Arkansas and Illinois formed each one.

About this time, the colony had considerable difficulty with the Indian tribes, and were involved in wars with the Chickasaws and the Natchez. This latter named tribe were finally completely con-

quered. The remnant of them dispersed among other Indians, so that, that once powerful people, as a distinct race, was entirely lost. Their name alone survives, as that of a flourishing city. Tradition related singular stories of the Natchez. It was believed that they emigrated from Mexico, and were kindred to the Incas of Peru. The Natchez alone, of all the Indian tribes, had a consecrated temple, where a perpetual fire was maintained by appointed guardians. Near the temple, on an artificial mound, stood the dwelling of their chief—called the Great Sun; who was supposed to be descended from that luminary, and all around were grouped the dwellings of the tribe. His power was absolute; the dignity was hereditary, and transmitted exclusively through the female line; and the race of nobles was so distinct, that usage had moulded language into the forms of reverence.

In 1732, the Mississippi Company relinquished their charter to the king, after holding possession fourteen years. At this period, Louisiana had five thousand whites, and twenty-five hundred blacks. Agriculture was improving in all the nine cantons, particularly in Illinois, which was considered the granary of the colony. Louisiana continued to advance until the war broke out with England in 1775, which resulted in the overthrow of French dominion.

Immediately after the peace of 1763, all the old French forts in the west, as far as Green Bay, were repaired and garrisoned with British troops. Agents and surveyors too, were making examinations of the finest lands east and northeast of the Ohio. Judging from the past, the Indians were satisfied that the British intended to possess the whole country. The celebrated Ottawa chief, Pontiac, burning with hatred against the English, in that year formed a general league with the western tribes, and by the middle of May all the western posts had fallen—or were closely besieged by the Indians, and the whole frontier, for almost a thousand miles, suffered from the merciless fury of savage warfare. Treaties of peace were made with the different tribes of Indians, in the year following, at Niagara, by Sir William Johnson; at Detroit or vicinity by General Bradstreet, and, in what is now Coshocton county, Ohio, by Col. Boquet; at the German Flats, on the Mohawk, with the Six Nations and their confederates. By these treaties, extensive tracts were ceded by the Indians in New York and Pennsylvania, and south of Lake Erie.

Peace having been concluded, the excitable frontier population began to cross the mountains. Small settlements were formed on the main routes, extending north toward Fort Pitt, and south to the head waters of the Holston and Clinch, in the vicinity of South-western Virginia. In 1766, a town was laid out in the vicinity of Fort Pitt. Military land warrants had been issued in great numbers, and a perfect mania for western land had taken possession of the people of the middle colonies. The treaty made by Sir William Johnson, at Fort Stanwix, on the site of Utica, New York, in

October, 1768, with the Six Nations and their confederates, and those of Hard Labor and Lochaber, made with the Cherokees, afforded a pretext under which the settlements were advanced. It was now falsely claimed that the Indian title was extinguished east and south of the Ohio, to an indefinite extent, and the spirit of emigration and speculation in land greatly increased. Among the land companies formed at this time was the "Mississippi Company," of which George Washington was an active member.

Up to this period very little was known by the English of the country south of the Ohio. In 1754, James M. Bride, with some others, had passed down the Ohio in canoes; and landing at the mouth of the Kentucky River, marked the initials of their names, and the date on the barks of trees. On their return, they were the first to give a particular account of the beauty and richness of the country to the inhabitants of the British settlements. No farther notice seems to have been taken of Kentucky until the year 1767, when John Finlay, an Indian trader, with others, passed through a part of the rich lands of Kentucky—then called by the Indians "*the Dark and Bloody Ground.*" Finlay, returning to North Carolina, fired the curiosity of his neighbors by the reports of the discoveries he had made. In consequence of this information, Col. Daniel Boone, in company with Finlay, Stewart, Holden, Monay, and Cool, set out from their residence on the Zadkin, in North Carolina, May 1st, 1769; and after a long and fatiguing march, over a mountainous and pathless wilderness, arrived on the Red River. Here, from the top of an eminence, Boone and his companions first beheld a distant view of the beautiful lands of Kentucky. The plains and forests abounded with wild beasts of every kind; deer and elk were common; the buffalo were seen in herds, and the plains covered with the richest verdure. The glowing descriptions of these adventurers inflamed the imaginations of the borderers, and their own sterile mountains beyond lost their charms, when compared to the fertile plains of this newly-discovered Paradise in the West.

In 1770, Ebenezer Silas and Jonathan Zane settled Wheeling. In 1771, such was the rush of emigration to Western Pennsylvania and Western Virginia, in the region of the Upper Ohio, that every kind of breadstuff became so scarce, that, for several months, a great part of the population were obliged to subsist entirely on meats, roots, vegetables, and milk, to the entire exclusion of all breadstuffs; and hence that period was long after known as "*the starving year.*" Settlers, enticed by the beauty of the Cherokee country, emigrated to East Tennessee, and hundreds of families also, moved farther south to the mild climate of West Florida, which at this period extended to the Mississippi. In the summer of 1773, Frankfort and Louisville, Kentucky, were laid out. The next year was signalized by "Dunmore's war," which temporarily checked the settlements.

In the summer of 1774, several other parties of surveyors and

hunters entered Kentucky, and James Harrod erected a dwelling—the first erected by whites in the country—on or near the site of Harrodsburg, around which afterward arose “Harrod Station.” In the year 1775, Col. Richard Henderson, a native of North Carolina, in behalf of himself and his associates, purchased of the Cherokees all the country lying between the Cumberland River and Cumberland Mountains and Kentucky River, and south of the Ohio, which now comprises more than half of the State of Kentucky. The new country he named *Transylvania*. The first legislature sat at Boonsborough, and formed an independent government, on liberal and rational principles. Henderson was very active in granting lands to new settlers. The legislature of Virginia subsequently crushed his schemes; they claimed the sole right to purchase lands from the Indians, and declared his purchase null and void. But as some compensation for the services rendered in opening the wilderness, the legislature granted to the proprietors a tract of land, twelve miles square, on the Ohio, below the mouth of Green River.

In 1775, Daniel Boone, in the employment of Henderson, laid out the town and fort afterward called Boonsborough. From this time Boonsborough and Harrodsburg became the nucleus and support of emigration and settlement in Kentucky. In May, another fort was also built, which was under the command of Col. Benjamin Logan, and named Logan’s Fort. It stood on the site of Stanford, in Lincoln county, and became an important post.

In 1776, the jurisdiction of Virginia was formally extended over the colony of Transylvania, which was organized into a county named Kentucky, and the first court was held at Harrodsburg in the spring of 1787. At this time the war of the Revolution was in full progress, and the early settlers of Kentucky were particularly exposed to the incursions of the Indian allies of Great Britain; a detailed account of which is elsewhere given in this volume. The early French settlements in the Illinois country now being in possession of that power, formed important points around which the British assembled the Indians and instigated them to murderous incursions against the pioneer population.

The year 1779 was marked in Kentucky by the passage of the Virginia Land Laws. At this time there existed claims of various kinds to the western lands. Commissioners were appointed to examine and give judgment upon these various claims, as they might be presented. These having been provided for, the residue of the the rich lands of Kentucky were in the market. As a consequence of the passage of these laws, a vast number of emigrants crossed the mountains into Kentucky to locate land warrants: and in the years 1779–’80 and ’81, the great and absorbing topic in Kentucky was to enter, survey and obtain patents for the richest lands, and this, too, in the face of all the horrors and dangers of an Indian war.

Although the main features of the Virginia land laws were just

and liberal, yet a great defect existed in their not providing for a general survey of the country by the parent State, and its subdivision into sections and parts of sections. Each warrant-holder being required to make his own survey, and having the privilege of locating according to his pleasure, interminable confusion arose from want of precision in the boundaries. In unskillful hands, entries, surveys, and patents were piled upon each other, overlapping and crossing in inextricable confusion; hence, when the country became densely populated, arose vexatious lawsuits and perplexities. Such men as Kenton and Boone, who had done so much for the welfare of Kentucky in its early days of trial, found their indefinite entries declared null and void, and were dispossessed, in their old age, of any claim upon that soil for which they had periled their all.

The close of the revolutionary war, for a time only, suspended Indian hostilities, when the Indian war was again carried on with renewed energy. This arose from the failure of both countries in fully executing the terms of the treaty. By it, England was obligated to surrender the northwestern posts within the boundaries of the Union, and to return slaves taken during the war. The United States, on their part had agreed to offer no legal obstacles to the collection of debts due from her citizens to those of Great Britain. Virginia, indignant at the removal of her slaves by the British fleet, by law prohibited the collection of British debts, while England, in consequence, refused to deliver up the posts, so that they were held by her more than ten years, until Jay's treaty was concluded.

Settlements rapidly advanced. Simon Kenton having, in 1784, erected a blockhouse on the site of Maysville—then called Limestone—that became the point from whence the stream of emigration, from down its way on the Ohio, turned into the interior.

In the spring of 1783, the first court in Kentucky was held at Harrodsburg. At this period, the establishment of a government, independent of Virginia, appeared to be of paramount necessity, in consequence of troubles with the Indians. For this object, the first convention in Kentucky was held at Danville, in December, 1784; but it was not consummated until eight separate conventions had been held, running through a term of six years. The last was assembled in July, 1790; on the 4th of February, 1791, Congress passed the act admitting Kentucky into the Union, and in the April following she adopted a State Constitution.

Prior to this, unfavorable impressions prevailed in Kentucky against the Union, in consequence of the inability of Congress to compel a surrender of the northwest posts, and the apparent disposition of the Northern States to yield to Spain, for twenty years, the sole right to navigate the Mississippi to the Gulf of Mexico, the exclusive right to which was claimed by that power as being within her dominions. Kentucky was suffering under the horrors of Indian warfare, and having no government of her own, she saw

"Not as Spaniards, but as murderers." Unable to hold possession of the country, de Gourgues retired to his fleet. Florida, excepting for a few years, remained under the Spanish crown, suffering much in its early history, from the vicissitudes of war and piratical incursions, until 1819, when, vastly diminished from its original boundaries, it was ceded to the United States, and in 1845 became a State.

In 1535, James Cartier, a distinguished French mariner, sailed with an exploring expedition up the St. Lawrence, and taking possession of the country in the name of his king, called it "New France." In 1608, the energetic Champlain created a nucleus for the settlement of Canada, by founding Quebec. This was the same year with the settlement of Jamestown, Virginia, and twelve years previous to that on which the Puritans first stepped upon the rocks of Plymouth.

To strengthen the establishment of French dominion, the genius of Champlain saw that it was essential to establish missions among the Indians. Up to this period "the far west" had been untrod by the foot of the white man. In 1616, a French Franciscan, named Le Caron, passed through the Iroquois and Wyandot nations—to streams running into Lake Huron; and in 1634, two Jesuits founded the first mission in that region. But just a century elapsed from the discovery of the Mississippi, ere the first Canadian envoys met the savage nations of the northwest at the falls of St. Mary's, below the outlet of Lake Superior. It was not until 1659 that any of the adventurous fur-traders wintered on the shores of this vast lake, nor until 1660 that Rene Mesnard founded the first missionary station upon its rocky and inhospitable coast. Perishing soon after in the forest, it was left to Father Claude Allouez, five years subsequent, to build the first permanent habitation of white men among the Northwestern Indians. In 1668, the mission was founded at the falls of St. Mary's, by Dablon and Marquette; in 1670, Nicholas Perrot, agent for the intendant of Canada, explored Lake Michigan to near its southern termination. Formal possession was taken of the northwest by the French in 1671, and Marquette established a missionary station at Point St. Ignace, on the mainland north of Mackinac, which was the first settlement in Michigan.

Until late in this century, owing to the enmity of the Indians bordering the Lakes Ontario and Erie, the adventurous missionaries, on their route west, on pain of death, were compelled to pass far to the north, through "a region horrible with forests," by the Ottawa and French Rivers of Canada.

As yet no Frenchman had advanced beyond Fox River, of Winnebago Lake, in Wisconsin; but in May, 1673, the missionary Marquette, with a few companions, left Mackinac in canoes; passed up Green Bay, entered Fox River, crossed the country to the Wisconsin, and, following its current, passed into and discovered the Mississippi; down which they sailed several hundred

miles, and returned in the Autumn. The discovery of this great river gave great joy to New France, it being "a pet idea" of that age that some of its western tributaries would afford a direct route to the South Sea, and thence to China. Monsieur La Salle, a man of indefatigable enterprise, having been several years engaged in the preparation, in 1682, explored the Mississippi to the sea, and took formal possession of the country in the name of the King of France, in honor of whom he called it Louisiana. In 1685, he also took formal possession of Texas, and founded a colony on the Colorado; but La Salle was assassinated, and the colony dispersed.

The descriptions of the beauty and magnificence of the Valley of the Mississippi, given by these explorers, led many adventurers from the cold climate of Canada to follow the same route, and commence settlements. About the year 1680, Kaskaskia and Cahokia, the oldest towns in the Mississippi Valley, were founded. Kaskaskia became the capital of the Illinois country, and in 1721, a Jesuit college and monastery were founded there.

A peace with the Iroquois, Hurons and Ottawas, in 1700, gave the French facilities for settling the western part of Canada. In June, 1701, De la Motte Cadillac, with a Jesuit missionary and a hundred men, laid the foundation of Detroit. All of the extensive region south of the lakes was now claimed by the French, under the name of Canada, or New France. This excited the jealousy of the English, and the New York legislature passed a law for hanging every Popish priest that should come voluntarily into the province. The French, chiefly through the mild and conciliating course of their missionaries, had gained so much influence over the western Indians, that, when a war broke out with England, in 1711, the most powerful of the tribes became their allies; and the latter unsuccessfully attempted to restrict their claims to the country south of the lakes. The Fox nation, allies of the English, in 1713, made an attack upon Detroit; but were defeated by the French and their Indian allies. The treaty of Utrecht, this year, ended this war.

By the year 1720, a profitable trade had arisen in furs and agricultural products — between the French of Louisiana and those of Illinois; and settlements had been made on the Mississippi, below the junction of the Illinois. To confine the English to the Atlantic coast, the French adopted the plan of forming a line of military posts, to extend from the great northern lakes to the Mexican Gulf, and as one of the links of the chain, Fort Chartres was built on the Mississippi, near Kaskaskia; and in its vicinity soon flourished the villages of Cahokia and Prairie du Rocher.

The Ohio at this time was but little known to the French, and on their early maps was but an insignificant stream. Early in this century their missionaries had penetrated to the sources of the Alleghany. In 1721, Joncaire, a French agent and trader, established himself among the Senecas at Lewistown, and Fort Niagara was erected, near the falls, five years subsequent. In 1735, accord-

marched, in September, 1790, from Cincinnati with thirteen hundred men, less than one-fourth of whom were regulars, to attack their towns on the Maumee. He succeeded in burning their towns; but in an engagement with the Indians, part of his troops met with a severe loss. The next year a larger army was assembled at Cincinnati, under Gen. St. Clair, composed of about three thousand men. With this force he commenced his march toward the Indian towns on the Maumee. Early in the morning of the 4th of Nov., 1791, his army, while in camp on what is now the line of Darke and Mercer counties, within three miles of the Indiana line, and about seventy north from Cincinnati, were surprised by a large body of Indians, and defeated with terrible slaughter. A third army, under Gen. Anthony Wayne, was organized. On the 20th of August, 1794, they met and completely defeated the Indians, on the Maumee River, about twelve miles south of the site of Toledo. The Indians at length, becoming convinced of their inability to resist the American arms, sued for peace. On the 3d of August, 1795, Gen. Wayne concluded a treaty at Greenville, sixty miles north of Cincinnati, with eleven of the most powerful northwestern tribes in grand council. This gave peace to the West of several years' duration, during which the settlements progressed with great rapidity. Jay's Treaty, concluded November 19th, 1794, was a most important event to the prosperity of the West. It provided for the withdrawal of all the British troops from the northwestern posts. In 1796, the Northwestern Territory was divided into five counties. Marietta was the seat of justice of Hamilton and Washington counties; Vincennes, of Knox county; Kaskaskia, of St. Clair county; and Detroit, of Wayne county. The settlers, out of the limits of Ohio, were Canadian or Creole French. The headquarters of the northwest army were removed to Detroit, at which point a fort had been built, by De la Motte Cadillac, as early as 1701.

Originally Virginia claimed jurisdiction over a large part of Western Pennsylvania as being within her dominions, yet it was not until after the close of the Revolution that the boundary line was permanently established. Then this tract was divided into two counties. The one, Westmoreland, extended from the mountains west of the Alleghany River, including Pittsburgh and all the country between the Kishkeminatas and the Youghiogeny. The other, Washington, comprised all south and west of Pittsburgh, inclusive of all the country east and west of the Monongahela River. At this period Fort Pitt was a frontier post, around which had sprung up the village of Pittsburgh, which was not regularly laid out into a town until 1784. The settlement on the Monongahela at "Redstone Old Fort," or "Fort Burd," as it originally was called, having become an important point of embarkation for western emigrants, was the next year laid off into a town under the name of Brownsville. Regular forwarding houses were soon established here, by whose lines goods were systematically wagoned

over the mountains, thus superseding the slow and tedious mode of transportation by pack-horses, to which the emigrants had previously been obliged to resort.

In July, 1786, "The Pittsburgh Gazette," the first newspaper issued in the west, was published; the second being the "Kentucky Gazette," established at Lexington, in August of the next year. As late as 1791, the Alleghany River was the frontier limit of the settlements of Pennsylvania, the Indians holding possession of the region around its northwestern tributaries, with the exception of a few scattering settlements, which were all simultaneously broken up and exterminated in one night, in February of this year, by a band of one hundred and fifty Indians. During the campaigns of Harmer, St. Clair and Wayne, Pittsburgh was the great depot for the armies.

By this time agriculture and manufactures had begun to flourish in Western Pennsylvania and Virginia, and an extensive trade was carried on with the settlements on the Ohio and on the Lower Mississippi, with New Orleans and the rich Spanish settlements in its vicinity. Monongahela whisky, horses, cattle, and agricultural and mechanical implements of iron were the principal articles of export. The Spanish government soon after much embarrassed this trade by imposing heavy duties.

The first settlements in Tennessee were made in the vicinity of Fort Loudon, on the Little Tennessee, in what is now Monroe county, East Tennessee, about the year 1758. Forts Loudon and Chissel were built at that time by Colonel Byrd, who marched into the Cherokee country with a regiment from Virginia. The next year war broke out with the Cherokees. In 1760, the Cherokees besieged Fort Loudon, into which the settlers had gathered their families, numbering nearly three hundred persons. The latter were obliged to surrender for want of provisions, but agreeably to the terms of capitulation were to retreat unmolested beyond the Blue Ridge. When they had proceeded about twenty miles on their route, the savages fell upon them and massacred all but nine, not even sparing the women and children.

The only settlements were thus broken up by this war. The next year the celebrated Daniel Boone made an excursion from North Carolina to the waters of the Holston. In 1766, Colonel James Smith, with five others, traversed a great portion of Middle and West Tennessee. At the mouth of the Tennessee, Smith's companions left him to make farther explorations in Illinois, while he, in company with a negro lad, returned home through the wilderness, after an absence of eleven months, during which he saw "neither bread, money, women, nor spirituous liquors."

Other explorations soon succeeded, and permanent settlements first made in 1768 and '69, by emigrants from Virginia and North Carolina, who were scattered along the branches of the Holston, French Broad and Watauga. The jurisdiction of North Carolina was, in 1777, extended over the Western District, which was

organized as the county of Washington, and extending nominally westward to the Mississippi. Soon after, some of the more daring pioneers made a settlement at Bledsoe's Station, in Middle Tennessee, in the heart of the Chickasaw nation, and separated several hundred miles, by the usual traveled route, from their kinsmen on the Holston. A number of French traders had previously established a trading post and erected a few cabins at the "Bluff" near the site of Nashville. To the same vicinity Colonel James Robertson, in the fall of 1780, emigrated with forty families from North Carolina, who were driven from their homes by the marauding incursions of Tarleton's cavalry, and established "Robertson's Station," which formed the nucleus around which gathered the settlements on the Cumberland. The Cherokees having commenced hostilities upon the frontier inhabitants about the commencement of the year 1781, Colonel Campbell, of Virginia, with seven hundred mounted riflemen, invaded their country and defeated them. At the close of the Revolution, settlers moved in in large numbers from Virginia, North and South Carolina, and Georgia. Nashville was laid out in the summer of 1784, and named from General Francis Nash, who fell at Brandywine.

The people of this district, in common with those of Kentucky, and on the upper Ohio, were deeply interested in the navigation of the Mississippi, and under the tempting offers of the Spanish governor of Louisiana, many were lured to emigrate to West Florida and become subjects of the Spanish king.

North Carolina having ceded her claims to her western lands, Congress, in May, 1790, erected this into a territory under the name of the "Southwestern Territory," according to the provisions of the ordinance of 1787, excepting the article prohibiting slavery.

The territorial government was organized with a legislature, a legislative council, with William Blount as their first Governor. Knoxville was made the seat of government. A fort was erected to intimidate the Indians, by the United States, in the Indian country, on the site of Kingston. From this period until the final overthrow of the northwestern Indians by Wayne, this territory suffered from the hostilities of the Creeks and Cherokees, who were secretly supplied with arms and ammunition by the Spanish agents, with the hope that they would exterminate the Cumberland settlements. In 1795 the territory contained a population of seventy-seven thousand two hundred and sixty-two, of whom about ten thousand were slaves. On the first of June, 1796, it was admitted into the Union as the State of Tennessee.

By the treaty of October 27, 1795, with Spain, the old sore, the right of navigating the Mississippi, was closed, that power ceding to the United States the right of free navigation.

The Territory of Mississippi was organized in 1798, and Winthrop Sargeant appointed Governor. By the ordinance of 1787, the people of the Northwest Territory were entitled to elect Repre-

representatives to a Territorial Legislature whenever it contained 5000 males of full age. Before the close of the year 1798 the Territory had this number, and members to a Territorial Legislature were soon after chosen. In the year 1799, William H. Harrison was chosen the first delegate to Congress from the Northwest Territory. In 1800, the Territory of Indiana was formed, and the next year, William H. Harrison appointed Governor. This Territory comprised the present States of Indiana, Illinois, Wisconsin, and Michigan, which vast country then had less than 6000 whites, and those mainly of French origin. On the 30th of April, 1802, Congress passed an act authorizing a convention to form a constitution for Ohio. This convention met at Chillicothe in the succeeding November, and on the 29th of that month, a constitution of State Government was ratified and signed, by which act Ohio became one of the States of the Federal Union. In October, 1802, the whole western country was thrown into a ferment by the suspension of the American right of depositing goods and produce at New Orleans, guaranteed by the treaty of 1795, with Spain. The whole commerce of the West was struck at in a vital point, and the treaty evidently violated. On the 25th of February, 1803, the port was opened to provisions, on paying a duty, and in April following, by orders of the King of Spain, the right of deposit was restored.

After the treaty of 1763, Louisiana remained in possession of Spain until 1803, when it was again restored to France by the terms of a secret article in the treaty of St. Ildefonso concluded with Spain in 1800. France held but brief possession; on the 30th of April she sold her claim to the United States for the consideration of fifteen millions of dollars. On the 20th of the succeeding December, General Wilkinson and Claiborne took possession of the country for the United States, and entered New Orleans at the head of the American troops.

On the 11th of January, 1805, Congress established the Territory of Michigan, and appointed William Hull, Governor. This same year Detroit was destroyed by fire. The town occupied only about two acres, completely covered with buildings and combustible materials, excepting the narrow intervals of fourteen or fifteen feet used as streets or lanes, and the whole was environed with a very strong and secure defense of tall and solid pickets.

At this period the conspiracy of Aaron Burr began to agitate the western country. In December, 1806, a fleet of boats with arms, provisions, and ammunition, belonging to the confederates of Burr, were seized upon the Muskingum, by agents of the United States, which proved a fatal blow to the project. In 1809, the Territory of Illinois was formed from the western part of the Indiana Territory, and named from the powerful tribe which once had occupied its soil.

The Indians, who, since the treaty of Greenville, had been at peace, about the year 1810, began to commit aggressions upon the inhabitants of the West, under the leadership of Tecumseh. The

quered. The remnant of them dispersed among other Indians, so that, that once powerful people, as a distinct race, was entirely lost. Their name alone survives, as that of a flourishing city. Tradition related singular stories of the Natchez. It was believed that they emigrated from Mexico, and were kindred to the Incas of Peru. The Natchez alone, of all the Indian tribes, had a consecrated temple, where a perpetual fire was maintained by appointed guardians. Near the temple, on an artificial mound, stood the dwelling of their chief—called the Great Sun; who was supposed to be descended from that luminary, and all around were grouped the dwellings of the tribe. His power was absolute; the dignity was hereditary, and transmitted exclusively through the female line; and the race of nobles was so distinct, that usage had moulded language into the forms of reverence.

In 1732, the Mississippi Company relinquished their charter to the king, after holding possession fourteen years. At this period, Louisiana had five thousand whites, and twenty-five hundred blacks. Agriculture was improving in all the nine cantons, particularly in Illinois, which was considered the granary of the colony. Louisiana continued to advance until the war broke out with England in 1775, which resulted in the overthrow of French dominion.

Immediately after the peace of 1763, all the old French forts in the west, as far as Green Bay, were repaired and garrisoned with British troops. Agents and surveyors too, were making examinations of the finest lands east and northeast of the Ohio. Judging from the past, the Indians were satisfied that the British intended to possess the whole country. The celebrated Ottawa chief, Pontiac, burning with hatred against the English, in that year formed a general league with the western tribes, and by the middle of May all the western posts had fallen—or were closely besieged by the Indians, and the whole frontier, for almost a thousand miles, suffered from the merciless fury of savage warfare. Treaties of peace were made with the different tribes of Indians, in the year following, at Niagara, by Sir William Johnson; at Detroit or vicinity by General Bradstreet, and, in what is now Coshocton county, Ohio, by Col. Boquet; at the German Flats, on the Mohawk, with the Six Nations and their confederates. By these treaties, extensive tracts were ceded by the Indians in New York and Pennsylvania, and south of Lake Erie.

Peace having been concluded, the excitable frontier population began to cross the mountains. Small settlements were formed on the main routes, extending north toward Fort Pitt, and south to the head waters of the Holston and Clinch, in the vicinity of South-western Virginia. In 1766, a town was laid out in the vicinity of Fort Pitt. Military land warrants had been issued in great numbers, and a perfect mania for western land had taken possession of the people of the middle colonies. The treaty made by Sir William Johnson, at Fort Stanwix, on the site of Utica, New York, in

October, 1768, with the Six Nations and their confederates, and those of Hard Labor and Lochaber, made with the Cherokees, afforded a pretext under which the settlements were advanced. It was now falsely claimed that the Indian title was extinguished east and south of the Ohio, to an indefinite extent, and the spirit of emigration and speculation in land greatly increased. Among the land companies formed at this time was the "Mississippi Company," of which George Washington was an active member.

Up to this period very little was known by the English of the country south of the Ohio. In 1754, James M. Bride, with some others, had passed down the Ohio in canoes; and landing at the mouth of the Kentucky River, marked the initials of their names, and the date on the barks of trees. On their return, they were the first to give a particular account of the beauty and richness of the country to the inhabitants of the British settlements. No farther notice seems to have been taken of Kentucky until the year 1767, when John Finlay, an Indian trader, with others, passed through a part of the rich lands of Kentucky—then called by the Indians "*the Dark and Bloody Ground*." Finlay, returning to North Carolina, fired the curiosity of his neighbors by the reports of the discoveries he had made. In consequence of this information, Col. Daniel Boone, in company with Finlay, Stewart, Holden, Monay, and Cool, set out from their residence on the Zadkin, in North Carolina, May 1st, 1769; and after a long and fatiguing march, over a mountainous and pathless wilderness, arrived on the Red River. Here, from the top of an eminence, Boone and his companions first beheld a distant view of the beautiful lands of Kentucky. The plains and forests abounded with wild beasts of every kind; deer and elk were common; the buffalo were seen in herds, and the plains covered with the richest verdure. The glowing descriptions of these adventurers inflamed the imaginations of the borderers, and their own sterile mountains beyond lost their charms, when compared to the fertile plains of this newly-discovered Paradise in the West.

In 1770, Ebenezer Silas and Jonathan Zane settled Wheeling. In 1771, such was the rush of emigration to Western Pennsylvania and Western Virginia, in the region of the Upper Ohio, that every kind of breadstuff became so scarce, that, for several months, a great part of the population were obliged to subsist entirely on meats, roots, vegetables, and milk, to the entire exclusion of all breadstuffs; and hence that period was long after known as "*the starving year*." Settlers, enticed by the beauty of the Cherokee country, emigrated to East Tennessee, and hundreds of families also, moved farther south to the mild climate of West Florida, which at this period extended to the Mississippi. In the summer of 1773, Frankfort and Louisville, Kentucky, were laid out. The next year was signalized by "Dunmore's war," which temporarily checked the settlements.

In the summer of 1774, several other parties of surveyors and

Scottish nobleman, under a grant from the Hudson's Bay Company.

In 1853, Washington Territory was organized. Uniting facilities for an immense commerce, extensive manufactures, and great agricultural wealth, this Territory is destined to become the center of a vast commerce, and ere many years, will assume a rank second, in population, commerce and wealth, to none on the Pacific coast.

When California became part of the United States, and gold was found in the beds of her rivers and the bosom of her soil, thousands flocked thither from every part of the country. The young and ardent from the old States, unused to toil and hardships, left all the comforts of home and entered the lists. Men from the West, less daintily raised, pressed forward in the race, and together they sought this far-famed Eldorado. Some realized their anticipations, but many a loved and cherished one fell and perished, weary with the march of life.

In 1850, two years after California was ceded to the United States by Mexico, the population was ninety-two thousand five hundred and sixty-seven; in 1852, it had increased to two hundred and sixty-four thousand four hundred and thirty-five; and the product of her gold-mines for that year was \$67,699,548. The product for 1853 was \$92,000,000, and from that period to the present, California has been rapidly and steadily increasing in population, commerce, agriculture, and wealth.

The overland route to California led directly through the vast territory, extending from the 37° to the 40° north latitude, and from the Missouri to the Rocky Mountains, laid down on our maps a few years ago as the Great American Desert; and thousands of emigrants passed through this beautiful country, regardless of its advantages, in their anxiety to reach the golden land.

The California fever has passed away, and now the tide of emigration is setting strongly to the broad prairies of Kansas; and though no gold is found in the beds of her clear swiftly flowing streams, or in the bosom of her soil, the beauty of her broad and beautifully rolling prairies, decked with the loveliest flowers of every hue and shade of coloring; the noble trees by the banks of her limpid streams; the exceeding beauty of the climate, and the fertility of her soil, more than compensate for the absence of the precious metals; and Kansas is increasing in population, wealth and commerce with a rapidity unprecedented, even in this fast age and land of progress.

HISTORICAL EVENTS;

REMARKABLE INDIVIDUAL ADVENTURES:

SKETCHES OF FRONTIER LIFE, ETC.

DISCOVERY OF THE MISSISSIPPI.

THE first explorers of Florida described the interior as abounding in immense quantities of gold. Fired by these reports, Ferdinand de Soto, the favorite companion of Pizarro in the conquest of Peru, sought and obtained his monarch's permission to conquer Florida. No sooner was the project published in Spain than the wildest hopes were indulged, and crowds of the wealthy and chivalrous cavaliers volunteered to enlist under the banner of De Soto. Selecting six hundred men in the bloom of life, the flower of his country, De Soto set sail from the port of San Lucar, and in May, 1539, landed at Tampa Bay, on the western coast of Florida.

And now began the nomadic march of the adventurers in an unknown land, they knew not whither; a numerous body of horsemen, beside infantry, completely armed; a force exceeding in numbers and equipments the famous expeditions against the empires of Mexico and Peru. Everything was provided that experience in former invasions and the cruelty of avarice could suggest; chains for captives, arms of all kinds then in use, and bloodhounds, as auxiliaries against the feeble natives. It was a roving expedition of gallant freebooters in quest of fortune. It was a romantic stroll of men whom avarice rendered ferocious, through unexplored regions, over unknown paths; wherever rumor might point to the residence of some chieftain with more than Peruvian wealth, or the ill-interpreted signs of the ignorant natives might seem to promise a harvest of gold. Religious zeal was also united with avarice; there were not only cavalry and foot soldiers, with all that belongs to warlike array, but twelve priests, beside other ecclesiastics, accompanied the expedition. Florida was to become Catholic during scenes of robbery and carnage. Ornaments, such as are used at the service of mass, were carefully provided; every festival was to be kept; every religious practice to be observed. As the procession marched through the wilderness, the solemn procession, which the usages of the church enjoined, was scrupulously instituted.

The march was tedious and full of dangers: the Indians always hostile. Their Indian guides would purposely lead the Castilians astray, and involve them in morasses; even though death under the fangs of the bloodhounds was the certain punishment. Captives whom they took were questioned as to the locality of gold, and, on giving unsatisfactory answers, were punished; one was burnt alive for his supposed falsehood. Others, taken prisoners, were tortured, some to death; others enslaved. These were led in chains with iron collars about their necks; their service was to grind the maize and to carry the baggage. One of their battles with the Indians, at their town on the site of Mobile, was among the bloodiest Indian fights ever known. The terrors of their cavalry gave the victory to the Spaniards. The town was set on fire, and two thousand five hundred of the natives are said to have been slain, suffocated or burned. They had fought with desperate courage, and but for the flame which consumed their light and dense settlements, would have effectually repulsed the invaders. "Of the Christians eighteen died;" one hundred and fifty were wounded with arrows; twelve horses were slain and seventy hurt. The baggage of the Spaniards, which was within the town, was entirely consumed. Amid these discouragements the soldiers desired to return home. De Soto was "a stern man, and of few words." He was inflexible, and his followers, "condescending to his will," continued to march onward through wild solitudes, suffering for want of food, their once gay apparel changed for skins of wild beasts and mats of ivy.

After devious wanderings, great hardships, and the loss of many of his men from disease and the arrows and war-clubs of the savages, De Soto, on the first of May, 1541, arrived on the banks of the Mississippi, near the site of Memphis. Soto was the first of Europeans to behold that magnificent river, which rolled its immense mass of waters through the splendid vegetation of a wide alluvial soil. The lapse of three centuries has not changed the character of the stream. It was then described as more than a mile broad; flowing with a strong current, and by the weight of its waters forcing a channel of great depth. The water was always muddy. Trees and timber were continually floating down stream.

Crossing the river, he marched in a northwest direction, more than two hundred miles, to near the highlands of White River, in the vicinity of the boundary line between Arkansas and Missouri. Neither gold nor gems did the mountains offer, and the disappointed adventurers turned southward, passing their third winter upon the Washita, a branch of the Red River of Louisiana. Increased misfortunes, repeated disappointments, and wasting melancholy so bore upon the health of Soto, that he fell a prey to a malignant fever in the spring following. His soldiers mourned his loss; the priest chanted over his remains the first requiems ever heard on the Mississippi, while the body of its discoverer, wrapt in a mantle, in the gloom of midnight was sunk beneath its turbid

waters. Thus perished the gallant De Soto, who had crossed a large part of the continent in search of gold, and found nothing so remarkable as his burial-place.

His dispirited followers, now reduced to near half of their original numbers, first attempted to cross the country to Mexico; but being compelled to again turn eastward, they constructed barks, sailed down the Mississippi, and following the coast of the Mexican Gulf, reached the Spanish settlements near the site of Tampico, in Mexico, in September, 1543. Thus terminated an expedition of more than four years, extraordinary in duration, and distinguished as being the first visit of Europeans to "the great father of waters." It was an expedition, wild and romantic in its conception, in fit keeping with that age of chivalrous adventure and visionary impulse.

EXPLORATIONS OF MARQUETTE AND LA SALLE.

JAMES MARQUETTE was one of the most zealous of that extraordinary class of men, the Jesuit Missionaries. In 1688, he repaired to St. Mary's, the outlet of Lake Superior, where he was employed in his holy calling. In his various excursions he was exposed to the inclemencies of nature and to the savage; he took his life in his hand and bade them defiance; waded through water and through snows, without the comfort of a fire; subsisted on pounded maize; was frequently without any other food than the unwholesome moss gathered from the rocks; traveled far and wide, but never without peril. Still, said he, life in the wilderness had its charms—his heart swelled with rapture as he moved over the waters, transparent as the most limpid fountain.

While residing at St. Mary's he resolved to explore the Mississippi, of whose magnificence many tales had been told. The project was favored by Talon, the Intendant or Governor of New France, who wished to ascertain whether the Mississippi poured its mighty floods into the Pacific Ocean or into the Gulf of Mexico. On the 10th of June, 1673, he left an Indian village on Fox River, of Green Bay, beyond which the foot of a white man had never penetrated. His companions were Joliet, a French gentleman, five French voyageurs, and two Indian guides. They transported their two bark canoes on their shoulders, across the portage of Fox River, launched them on the Wisconsin, and passing down that stream, reached on the 7th of July the great "*Father of Waters*," which they entered with "a joy that could not be expressed," and raising their sails to new skies, and to unknown breezes, floated down this mighty river, between broad plains, garlanded with majestic forests, and checkered with illimitable prairies and island groves. They descended about one hundred and eighty miles when Marquette and Joliet landed, and followed an Indian trail about

six miles, to a village. They were met by four old men, bearing the pipe of peace, and "brilliant with many colored plumes." An aged chief received them at his cabin, and, with uplifted hands, exclaimed: "How beautiful is the sun, Frenchmen, when thou comest to visit us!—our whole village awaits thee—in peace thou shalt enter all our dwellings." Previous to their departure, an Indian chief selected a peace pipe from among his warriors, embellished with gorgeous plumage, which he hung around the neck of Marquette, "the mysterious arbiter of peace and war—the sacred calumet—the white man's protection among savages."

On reaching their boats, the little group proceeded onward. "I did not," says Marquette, "fear death; I should have esteemed it the greatest happiness to have died for the glory of God." They passed the mouth of the Missouri, and the humble missionary resolved in his mind, one day, to ascend its mighty current, and ascertain its source; and descending from thence toward the West, published the gospel to a people of whom he had never heard.

Passing onward, they floated by the Ohio, then, and for a brief time after, called the Wabash, and continued their explorations as far south as the mouth of the Arkansas, where they were escorted to the Indian village of Arkansia.

Being now satisfied that the Mississippi entered the Gulf of Mexico, west of Florida and east of California, and having spoken to the Indians of God and the mysteries of the Catholic faith, Marquette and Joliet prepared to ascend the stream. They returned by the route of the Illinois River to Green Bay, where they arrived in August. Marquette remained to preach the gospel to the Miamies, near Chicago. Joliet, in person, conveyed the glad tidings of their discoveries to Quebec. They were received with enthusiastic delight. The bells were rung during the whole day, and all the clergy and dignitaries of the place went in procession to the Cathedral, where Te Deum was sung and high mass celebrated.

Expedition of La Salle.—Notwithstanding the great excitement produced by this event, it did not lead immediately to any farther undertakings. The good Father Marquette dying soon after, and Joliet being otherwise occupied, the great river remained unnoticed in the wilderness, and its discovery seemed almost forgotten, when attention to it was suddenly revived by another enterprising and enthusiastic Frenchman, Robert Cavalier de La Salle, who had belonged to the order of Jesuits. Courageous, enterprising, and persevering, he was precisely the man to complete the undertaking commenced by Marquette. By the advice of Frontenac, Governor of New France, he returned to France and obtained from Louis XIV, the needed assistance to explore the Mississippi to its mouth. A ship well armed and supplied was equipped, and Tonti, a brave Italian officer, having joined him in the enterprise, they set sail from Rochelle, June 14, 1678. La Salle had received from the king the command of Fort Frontenac, and a monopoly of the fur trade in all the countries he should discover. He was the first

person who proposed the union of New France with the Mississippi, and suggested their close connection by a line of military posts.

Soon after his arrival, he repaired Fort Frontenac, and built another fort in its vicinity, and had constructed a vessel on Lake Erie, named the "Griffin," the first vessel that ever spread its sails on those waters. In September, 1679, he embarked with forty men, among whom was Father Hennepin. At Mackinaw, La Salle erected a military and trading post, sold his goods at an immense profit to the natives, and purchased a rich cargo of furs, which were immediately sent in the Griffin to Niagara for disposal, while he and his companions embarked in bark canoes for the River St. Joseph, where he erected "the Fort of the Miamies." They were there met by Tonti, who had come by a different route. Passing over to the Illinois together, and descending with the current, they reached the Mississippi.

La Salle first resolved to ascend that stream, hoping thereby to discover the supposed passage to China, and deeming it also advisable to attempt finding an easier line of communication between Canada and this important river. Accordingly Father Hennepin, with two other Frenchmen, ascended the river to beyond the falls, which they named St. Anthony, and were taken prisoners by the Sioux: they were well treated—remained about three months, and then returned to Canada. In the meantime, La Salle remained among the Illinois. He heard no tidings of the Griffin, which was lost. All his fortune was embarked in her. He commenced building a fort a little above Peoria, and thwarted as it were by destiny, and writhing in agony, he named it *Crevecoeur*—that is, broken hearted. Additional resources now being required to prosecute his voyage, La Salle left his men in winter quarters at the fort, and with but three companions penetrated through the wilderness on foot, amid the snows of winter, to Fort Frontenac, distant 1,500 miles. In his absence, Tonti commenced fortifying Rock Fort, but was compelled by the invading Iroquois Indians to seek shelter among the friendly tribes in the vicinity of Chicago. La Salle having returned with men and materials for building a bark, left Chicago on the 4th of January, 1682, and after constructing a spacious barge on the Illinois, in the early part of the year, he descended "the Mississippi to the sea."

This was the first descent of that river yet achieved. La Salle saw at once the resources of the mighty valley; his heart dilated with joy, and after planting the arms of France in the Gulf of Mexico, and claiming the whole country for France, he named it in honor of his king, *Louisiana*. Elated by his discovery, he hastened to Quebec and immediately sailed for France. In 1684, he left France with two hundred and eighty persons, intending to plant a colony on the lower Mississippi. By mistake, the vessels passed by the mouth of the Mississippi without discovering it, and La Salle was compelled by circumstances to land on the Bay of

St. Bernard, where he erected Fort St. Louis, and took possession of Texas in the name of his king. He spent four months in a vain search for the Mississippi. Shortly after his return the colony was threatened with famine. La Salle, selecting a few men, started with the desperate resolution of finding Canada or perishing in the attempt, but was murdered by one of his companions when a short distance on the journey. The colonists left behind, soon after, were all massacred by the Indians, excepting a few children. The death of La Salle put an end, for a time, to all prospects of colonization. The peace of Ryswick, in 1697, gave France leisure to attend to her western possessions, and Iberville laid the foundation for permanent settlements at the mouth of the Mississippi.

SUFFERINGS OF EARLY FRENCH MISSIONARIES.

UPON the founding of Quebec, in 1608, by Champlain, that energetic man saw, that to strengthen the dominion of the French in the West, it was essential to establish missions among the Indians; influenced also by religious zeal, he esteemed "the salvation of a soul worth more than the conquest of an empire." Up to this period, the "Far West" had been untrod by the foot of a white man. In 1616, four years previous to the landing of the Pilgrims on the rocks of Plymouth, Le Caron, a French Franciscan monk, had passed through the Iroquois and Wyandot nations to streams running into Lake Huron. Bound by his vows to the life of a beggar, he traveled on foot or paddled a bark canoe, and pursued his lonely way, taking alms of the savages. The final establishment of missions was intrusted solely to "the Society of Jesus." The Jesuits in Canada had been disciplined by the severity of a Canadian life in the wilderness, and resisted its horrors by an invincible passive courage and a deep internal tranquillity. Away from the amenities of life, away from the opportunities of vain glory, they became dead to the world, while the few who long survived the toils of their protracted missions, kindled with the power of apostolic zeal. Not a town of note was founded, not a river explored in French America, but a Jesuit led the way.

In 1634, the Jesuits, Brebœuf and Daniel, founded the mission of St. Joseph, the first on Lake Huron. Until late in the century, such was the enmity of the Iroquois Indians, excited by the English colonies, that the country south of the Lakes Ontario and Erie was unknown to the French, and the adventurous missionaries, in fear of death, were compelled to pass far to the north, through a region "horrible with forests," by the Ottawa and French Rivers of Canada West, suffering innumerable hardships, compelled to toil all day long at the oar, or drag their canoes around the waterfalls, their feet pierced with sharp stones, their garments torn; often having but scanty food, and their couch, the earth or rocks.

At St. Joseph, Brebœuf and Daniel erected their little chapel, and soon after, two new missions, St. Louis and St. Ignatius, bloomed among the Huron forests. There the Huron hunter, as he returned from his wide roamings, was taught to hope for eternal rest, and dusky warriors, in pious veneration, joining in the mystic rites of the Catholic Church, uttered prayers and vows in the Huron tongue.

Within thirteen years, this remote wilderness was visited by sixty missionaries; chosen men, ready to shed their blood for their faith. In 1641, Raymbault and Jogues visited the Indians at the falls of St. Mary, at the outlet of Lake Superior; this was five years before the New England Elliot had addressed the Indians that dwelt around Boston Harbor. Ere the close of the century, missionary stations had multiplied greatly upon the watercourses and lakes of the West. The missionaries themselves possessed the weakness and the virtues of their orders. For fifteen years enduring the infinite labors and perils of the Huron mission, and exhibiting, as it was said, "an absolute pattern of every religious virtue," Jean de Brebœuf, respecting even the nod of his distant superiors, lowered his mind and judgment in obedience. Beside the assiduous fatigues of his office, each day, and sometimes twice in the day, he applied himself to the lash; beneath a bristling hair shirt he wore an iron girdle, armed on all sides with projecting points; his fasts were frequent; almost always his pious vigils continued deep in the night. In vain for him did Nature assume its forms of beauty; his eye rested benignantly on divine things. Once, imparadised in a trance, he beheld the mother of Him whose cross he bore, surrounded by a crowd of virgins, in the beatitudes of heaven. Once, as he himself has recorded, while engaged in penance, he saw Christ unfold his arms to embrace him with the utmost love, promising oblivion for his sins. Once, late at night, while praying in silence, he had a vision of an infinite number of crosses, and with mighty heart he strove again and again to grasp them all. Often he saw the shapes of foul fiends, now appearing as madmen, now as raging beasts; and often he beheld the image of *Death*, a bloodless form, by the side of the stake, struggling with bonds, and at last, falling as a harmless specter at his feet. Having vowed to seek out suffering for the greater glory of God, he renewed that vow every day, at the moment of tasting the sacred water; and as his cupidity for martyrdom grew into a passion, he exclaimed, "What shall I render to thee, Jesus, my Lord, for all thy benefits? I will accept thy cup and invoke thy name;" and in sight of the Eternal Father and the Holy Spirit, of the Virgin Mary, most holy mother of Christ, before angels, saints, apostles, and martyrs, he made a vow never to decline the opportunity of martyrdom, and never to receive the death-blow but with joy.

The Jesuit missionaries suffered terribly from the Iroquois Indians, the hereditary enemies of the Hurons. Isaac Jogues, on his way to St. Mary's, was taken prisoner by the Mohawks, on

the St. Lawrence. He might have escaped, but there were with him converts that had not yet been baptized—and when did a Jesuit missionary seek to save his own life at what he believed the risk of a soul? In several villages he was compelled to run the gauntlet, and was tortured with hunger and thirst. Similar was the fate of Father Bressani. Taken prisoner while on his way to the Hurons; beaten, mangled, mutilated, driven bare-footed over rough paths, through briers and thickets; scourged by a whole village; burned, tortured, wounded and scarred—he was eye-witness to the fate of one of his companions, who was boiled and eaten. Yet some mysterious awe protected his life, and he, as well as Jogues, was humanely rescued by the Dutch. The devoted missionaries encountered danger and suffering in every form; from the perils of nature as well as the inhumanity of savages. Some were drowned on their way to their missions; some starved to death; others, losing their way among pathless snows, perished by intense cold.

Eventually each solitary mission among the Hurons became a special point of attraction to the invading Iroquois, and liable to the horrors of an Indian massacre. Such was the fate of the village of St. Joseph. On the morning of 4th July, 1648, when the warriors were absent on a chase, the village was attacked by the Mohawks. A group of women and children flew to the missionary, Father Anthony Daniel, to escape the tomahawk, as if his lips, uttering messages of love, could pronounce a spell that would curb the madness of destruction. Those who had formerly scoffed at his mission, implored the benefit of baptism. He bade them ask forgiveness of God, and dipping his handkerchief in water, baptized the crowd of suppliants. Just then the palisades were forced; but instead of flying, he ran to the wigwams to baptize the sick, give absolution, and then, when the wigwams were set on fire and the Mohawks approached his chapel, he serenely advanced to resign his life as a sacrifice to his vows. As they drew near, they discharged at him a flight of arrows. All gashed and rent with wounds, he addressed to them, with surprising energy, the affectionate messages of Divine mercy and grace. The fatal blow was given—the name of Jesus died on his lips—the wilderness gave him a grave, and the Huron nation were his mourners.

The next year the villages of St. Ignatius and St. Louis were destroyed by the Iroquois. In this last were Brebœuf and Lallemand. They might both have escaped; but they remained to bend over the dying converts and give them baptism. They were taken prisoners. Brebœuf was set apart on a scaffold, and in the midst of every outrage, rebuked his persecutors and encouraged his Huron converts. They cut off his lower lip and nose; applied burning torches to his body; burned his gums, and thrust hot iron down his throat. Deprived of his voice, his assured countenance and confiding eye still bore witness to his firmness. The delicate Lallemand was stripped naked, and enveloped from head to foot

with bark full of rosin. Brought into the presence of Brebœuf, he exclaimed, "We are made a spectacle unto the world, and to angels, and to men." The fine bark was set on fire, and when it was in a blaze, boiling water was poured on the heads of both the missionaries. The voice of Lallemand was choked by the thick smoke; but the fire having snapped his bonds, he lifted his hands to Heaven, imploring the aid of Him who is an aid to the weak. Brebœuf was scalped while yet alive, and died after a torture of three hours; the sufferings of Lallemand were protracted for seventeen hours. The lives of both had been a continual heroism; their deaths were the astonishment of their executioners.

These massacres quenched not enthusiasm; the Jesuits never receded one foot; but, as in a brave army new troops press forward to fill the places of the fallen, there were never wanting heroism and enterprise in behalf of the Cross and French dominion.

CURIOSITIES AT MICHILIMACKINAC.

Nothing can present a more picturesque and refreshing spectacle to the traveler, wearied with the lifeless monotony of a voyage through Lake Huron, than the first sight of the island of Michilimackinac, which rises from the watery horizon in lofty bluffs, imprinting a rugged outline along the sky, and capped with a fortress on which the American flag is seen waving against the blue heavens. The name is a compound of the word *missi* or *missil*, signifying "great," and mackinac, the Indian word for "turtle," from a fancied resemblance of the island to a great turtle lying upon the water.

It is a spot of much interest, aside from its romantic beauty, in consequence of its historical associations and natural curiosities. It is nine miles in circumference, and its extreme elevation above the lake over three hundred feet. The town is pleasantly situated around a small bay at the southern extremity of the island, and contains a few hundred souls, which are sometime swelled to one or two thousand by the influx of voyageurs, traders and Indians. On these occasions its beautiful harbor is seen checkered with American vessels at anchor, and Indian canoes rapidly shooting across the water in every direction. It was formerly the seat of an extensive fur trade; at present it is noted for the great amount of trout and white fish annually exported. Fort Mackinac stands on a rocky bluff overlooking the town. The ruins of Fort Holmes are on the apex of the island. It was built by the British in the war of 1812, under the name of Fort George, and changed to its present appellation after the surrender to the Americans, in compliment to the memory of Major Holmes, who fell in the attack upon the island.

The *old* town of Michilimackinac stood on the extreme point of the Peninsula of Michigan, nine miles south of the island. Eight years before La Salle's expedition, Father Marquette, the French missionary, visited this spot with a party of Hurons, upon whom he prevailed to locate themselves. A fort was soon constructed, and it became an important post. It continued to be the seat of the fur trade, and the undisturbed rendezvous of the Indian tribes during the whole period that the crown of France exercised jurisdiction over the Canadas.

The island of Michilimackinac, or Mackinaw, contains three objects of natural curiosity. The *Arched Rock* is a natural arch projecting from the precipice on the northeastern side of the island, about a mile from the town, and elevated one hundred and forty feet above the water. Its abutments are the calcareous rock common to the island, and have been created by the falling down of enormous masses of the rock, leaving the chasm. It is about ninety feet in height, and is crowned with an arch of near sixty feet sweep. From its great elevation, the view through the arch upon the wide expanse of water, is of singular beauty and grandeur. The *Natural Pyramid* is a lone standing rock, upon the top of the bluff, of probably thirty feet in width at the base, by eighty or ninety in height, of a rugged appearance, and supporting in its crevices a few stunted cedars. It pleases chiefly by its novelty, so unlike anything to be found in other parts of the world; and in first approaching it, gives the idea of a work of art. The *Skull Rock* is chiefly noted for a cavern, which appears to have been an ancient receptacle of human bones. The entrance is low and narrow. It is here that Alexander Henry was secreted by a friendly Indian, after the horrid massacre of the British garrison at *old* Michilimackinac, in 1763.

LIFE AMONG THE PRAIRIE DOGS.

THE prairie dog, like the buffalo, retreats before the advance of civilization, and is now to be found only on the vast plains between the Mississippi and the Rocky Mountains. A recent traveler gives the annexed description of these singular animals and their cities, which, unknown to map makers, dot the immense prairies of the far West.

These little fellows select for their towns a level piece of prairie, with a sandy or gravelly soil, out of which they can excavate their dwellings with great facility. Being of a very sociable disposition, they choose to live in a large community where laws exist for the public good; and there is less danger to be apprehended from the attacks of their numerous and crafty enemies. Their towns equal in extent and population the largest cities of Europe; some extending many miles in length, with considerable regularity in their

streets, and their houses of a uniform style of architecture. Although their form of government may be styled republican, yet great respect is paid to their chief magistrate, who, generally a dog of large dimensions, and imposing appearance, resides in a dwelling conspicuous for size, in the center of the town, where he may always be seen on his house top, regarding with dignified com-
placency the various occupations of the busy population—some industriously bearing to the granaries the winter supply of roots, others building or repairing their houses; while many, their work being over, sit chatting on their house tops, watching the gambols of the juveniles as they play around them.

Their hospitality to strangers is unbounded. The owl, who on the bare prairie is unable to find a tree or rock on which to build her nest, is provided with a comfortable lodging, where she may in security rear her round-eyed progeny; and the rattlesnake, in spite of his bad character, is likewise entertained with similar hospitality; yet it is sometimes grossly abused: for many a childless dog may, perhaps, justly attribute his bereavement to the partiality of the epicurean snake for the tender meat of the delicate prairie pup.

The prairie dog, a species of Marmot, is somewhat longer than a Guinea pig, of a light brown or sandy color, and with a head somewhat resembling that of a young terrier pup. It is also furnished with a little stumpy tail, which, when its owner is excited, is in a perpetual jerk and flutter. Frequently while hunting, have I, lying concealed beneath one of their conical houses, amused myself for hours in watching their frolicksome motions. Their dwellings are raised two or three feet above the ground, and at the top is a hole three feet in perpendicular depth, and then descending obliquely into the interior. Of course on the approach of such a monster as man, all the dogs which have been scattered over the town, scamper to their holes as fast as their little legs will admit, and concealing all but their heads and tails, bark lustily their displeasure at the intrusion. When they have sufficiently exhibited their daring, every dog dives into his burrow but two or three, who remain as sentinels, chattering in high dudgeon, until the enemy is within a few paces of them, when they take the usual somerset, and the town is silent and deserted. Lying perfectly still for several minutes, I could observe an old fellow raise his head cautiously above his hole and reconnoiter, and if satisfied that the coast was clear, he would commence a short bark. This bark, by the way, from its resemblance to that of a dog, has given that name to the little animal, but it is more like that of a wooden toy dog, which is made to bark by raising and depressing the bellows under the fissure. When this warning has been given, others are soon seen to emerge from their houses, and assured of their security, play and frisk about. After a longer delay, rattlesnakes issue from their holes and coil themselves on the sunny side of the hills, waving their treacherous heads, and rattling an angry note.

THE ARCHED ROCK AT MACKINAW.

"It is about ninety feet in height, and is crowned with an arch of near sixty feet sweep. From its great elevation, the view through the arch, upon the wide expanse of water is of singular beauty and grandeur."

in its play, a thoughtless pup approaches too near; and lastly, a sober owl appears, and if the sun be low, hops through the town, picking up the lizards and chameleons which everywhere abound.

At the first intimation of danger given by the sentinels, all the stragglers hasten to their holes, tumbling over owls and rattlesnakes, who hiss and rattle angrily at being disturbed. Every one scrambles off to his own domicile, and if in his hurry he should mistake his dwelling, he is quickly made sensible of his error, and without ceremony ejected. Then, every house occupied, commences such a volley of barking, and such a twinkling of little heads and tails, which alone appear above the holes, as to defy description. The lazy snakes, regardless of danger, remain coiled up, and only evince their consciousness by an occasional rattle; while the owls, in the hurry and confusion, betake themselves with sluggish wing, to wherever a bush of sage or greasewood affords them temporary concealment.

The prairie dog leads a life of constant alarm, and numerous enemies are ever on the watch to surprise him. The hawk and eagle, hovering high in air, watch their towns, and pounce suddenly upon them, never failing to carry off in their talons some unhappy member of the community. The coyote, too, a hereditary foe, lurks behind a hillock, watching patiently for hours until an unlucky straggler approaches within reach of his murderous spring. In the winter, when the prairie dog, snug in his subterranean abode, and with granaries well filled, never cares to expose his little nose to the icy blasts which sweep across the plains, but between eating and sleeping, passes merrily the long frozen winter, he is often roused from his warm bed, and almost congealed with terror while hearing the snorting yelp of the half-famished wolf, who, mad with hunger, assaults with tooth and claw the frost-bound roof of his house, and with almost superlupine strength, hurls down the well cemented walls, tears up the passages, plunges his cold nose into the very chambers, snorts into them with ravenous anxiety, and drives the poor little trembling inmate into the most remote corners, too often to be dragged forth and unhesitatingly devoured. The rattlesnake too, I fear, is not the welcome guest he reports himself to be; for I have often slain the wily serpent with a belly too much protuberant to be either healthy or natural, and bearing in its outline a very strong resemblance to the figure of a prairie dog.

THE FRENCH AND INDIAN WAR.

By the middle of the last century, the power of France had been extended over a great part of North America. The first efforts toward the settlement of the Mississippi Valley were made by that power at several of its remotest points on the great Lakes; on the

Wabash; at Kaskaskia, on the Mississippi; whence their settlements extended across the Mississippi to St. Genevieve and St. Louis; on the Mexican Gulf, at Biloxi and Mobile, and on the Lower Mississippi, at New Orleans.

In pursuance of their great plan of occupying the whole valley, and connecting their settlements from Canada to the Gulf of Mexico by a line of posts, with water communications, like the cord of an immense semicircle, stretching along the whole rear of the English settlements, they gradually extended their fortifications to the south side of Lake Erie; erecting one at Presque Isle, on the site of Erie, and another at Le Bœuf, on the French Creek between that point and the Ohio, and a third on Duquesne, at the junction of the Alleghany and Monongahela, on the site of Pittsburgh. The advantages of that admirable position did not escape the eyes of a people remarkably acute to discern the advantages of military posts. By it they proposed to command the trade, and awe the obedience of the Indians of the Ohio and the Lakes, and connect the southern Canadian posts by the long and unrivaled communication of the Ohio, with the settlements of the Wabash, Illinois, and lower Mississippi.

It was not to be supposed that the English could regard these proceedings of their rivals without alarm, or that they could see them monopolizing the vast and fertile country of Upper Louisiana without desiring to share its advantages, especially as they considered themselves possessing an equal claim to them. In consequence of the discovery of the Cabots, they asserted the right of extending their settlements as far as the Pacific. The French, on the other hand, maintained their claim to the valley of the Mississippi on the ground of having been the first to explore and colonize it, and insisted that the English should confine themselves to the country east of the Alleghany Mountains. Amid these conflicting pretensions, neither party seems to have imagined that there might be prior rights, which equally barred the claims of both. An Indian chief remarked, on the occasion of this dispute, "The French claim all the country to the west, and the English all to the east and west; where, then, is the country of the Indians?" This was an embarrassing question, and has never yet been satisfactorily answered.

At this time, however, the Indians did not seem to think of asserting their own rights, but took part in the quarrels of the two nations which were both equally regardless of them: a very fortunate circumstance for the French, as Canada then contained only 45,000 inhabitants, and the whole of Louisiana no more than 7,000 whites, while the English colonies had a population of 1,051,000.

The rival nations now only waited an occasion of commencing the contest; and it soon arrived. Shortly after the conclusion of the last war, several individuals in Virginia and England associated together under the name of the Ohio Company, and obtained

a grant from the crown of six hundred thousand acres of land, lying in the country claimed by either nation. The objects of this company being commercial as well as territorial, measures were taken for securing all the advantages which could be derived from their charter, by establishing trading-houses and employing persons to survey the country.

The governor of Canada, on receiving information of what he considered an encroachment on the French dominions, wrote to the governors of New York and Pennsylvania, stating that the English traders had trespassed upon the French territory, and that, if they were not made to desist, he should be under the necessity of seizing them. Finding his threats disregarded, he proceeded to put them in execution; and arresting the company's servants, had them conveyed as prisoners to Presque Isle, on Lake Erie, where he was engaged in erecting a strong fort. About the same time, a communication was opened from Presque Isle, along French Creek and the Alleghany River, to the Ohio, called by the French, La Belle Riviere. This communication was kept up by detachments of troops posted at proper distances, in works capable of protecting them against an attack made with small arms alone.

This military line passing through the territory granted to the Ohio Company as a part of Virginia, the lieutenant-governor of that province laid the matter before the Assembly, and dispatched Washington, then a young officer only twenty-one years old, with a letter to Monsieur de St. Pierre, commander of the French forces on the Ohio, requiring him to withdraw from the dominions of his Britannic majesty. M. de St. Pierre replied with politeness, but in decided terms, that he had taken possession of the country by order of his superior officer, Governor Duquesne, to whom he would transmit the letter, but the summons to retire he could not comply with.

In 1754, preparations were immediately made in Virginia to assert the rights of the British crown, and a regiment was sent to the defense of the frontier. Advancing with a small detachment, Washington fell in with a party of French and Indians, who approached with every appearance of hostile intentions. A skirmish ensued in which the commander of the party, M. de Jumonville, and ten of his men were killed.

The object of the American officer had been to anticipate the French in occupying the post at the junction of the Alleghany and Monongahela, where a party of militia and a body of workmen had been sent by the Ohio Company; but finding they had already driven the latter away and erected a strong fort on the spot, and foreseeing that, on hearing of the affair of Jumonville, they would at once send a detachment against him, he hastily completed a small stockade he had commenced at a place called Great Meadows, near the site of Uniontown, Pa., and gave to it the name of Fort Necessity. Here he was soon attacked, and, after a gallant defense, capitulated on honorable terms.

This action being considered by the British government as the commencement of hostilities by the French, troops were immediately sent from England to prosecute the war. Among the different expeditions planned was one under Gen. Braddock against Fort Duquesne, on the site of Pittsburgh.

The Battle of the Monongahela.—Major Gen. Edward Braddock arrived in this country early in the year 1755, with two regiments of veteran English troops. He was joined at Fort Cumberland by a large number of provincial troops to aid in the contemplated reduction of Fort Duquesne. Dividing his force, he pushed onward with about 1,200 chosen men through dark forests and over pathless mountains.

Col. George Washington, who was a volunteer aid of Braddock, but had been left behind on account of illness, overtook the general on the evening of the 8th of July, at the mouth of the Youghiogheny River, fifteen miles from Duquesne, the day before the battle.

The officers and soldiers were now in the highest spirits, and firm in the conviction that they should within a few hours victoriously enter within the walls of Fort Duquesne. Early on the morning of the 9th, the army passed through the river a little below the mouth of the Youghiogheny, and proceeded in perfect order along the southern margin of the Monongahela. Washington was often heard to say, during his lifetime, that the most beautiful spectacle he had ever beheld was the display of the British troops on this eventful morning. Every man was neatly dressed in full uniform, the soldiers were arranged in columns, and marched in exact order, the sun gleamed from their burnished arms, the river flowed tranquilly on their right, and the deep forest overshadowed them with solemn grandeur on their left. Officers and men were equally inspired with cheering hopes and confident anticipations.

In this manner they marched forward until about noon, when they arrived at the second crossing-place, ten miles from Fort Duquesne. They halted but a little time, and then began to ford the river, and regain its northern bank. As soon as they had crossed they came upon a level plain, elevated only a few feet above the surface of the river, and extending northward nearly half a mile from its margin. They commenced a gradual ascent on an angle of about three degrees, which terminated in hills of a considerable height at no great distance beyond. The road, from the fording-place to Fort Duquesne, led across the plain and up this ascent, and thence proceeded through an uneven country, at that time covered with wood.

By the order of march, three hundred men under Col. Gage made the advanced party, which was immediately followed by another of two hundred. Next came the general with the columns of artillery, the main body of the army and the baggage. About one o'clock the whole had crossed the river, and almost at this

moment, a sharp firing was heard upon the advanced parties, who were now ascending the hill, and had proceeded about one hundred yards from the termination of the plain. A heavy discharge of musketry was poured in upon their front, which was the first intelligence they had of an enemy; and this was suddenly followed by another upon their right flank. They were filled with the greatest consternation, as no enemy was in sight, and the firing seemed to come from an invisible foe. They fired in turn, however, but quite at random, and obviously without effect.

The general hastened forward to the relief of the advanced parties; but before he could reach the spot which they occupied, they gave way, and fell back upon the artillery and the other columns of the army, causing extreme confusion, and striking the whole mass with such a panic, that no order could afterward be restored. The general and the officers behaved with the utmost courage, and used every effort to rally the men, and bring them to order, but all in vain. In this state they continued nearly three hours, huddling together in confused bodies, firing irregularly, shooting down their own officers and men, and doing no perceptible harm to the enemy. The Virginia provincials were the only troops who seemed to retain their senses, and they behaved with a bravery and resolution worthy of a better fate. They adopted the Indian mode, and fought, each man for himself, behind a tree. This was prohibited by the general, who endeavored to form his men into platoons and columns, as if they had been maneuvering on the plains of Flanders. Meantime the French and Indians, concealed in the ravines and behind trees, kept up a deadly and unceasing discharge of rifles, singling out their objects, taking deliberate aim, and producing a carnage almost unparalleled in the annals of modern warfare. More than half the whole army which had crossed the river in so proud an array only three hours before, were either killed or wounded. The general himself received a mortal wound, and many of his best officers fell by his side.

During the whole of the action, Col. George Washington, then twenty-three years of age, behaved with the greatest courage and resolution. The other two aids-de-camp were wounded, and on him alone devolved the duty of distributing the orders of the general. He rode in every direction, and was a conspicuous object for the enemy's sharp-shooters. He had four bullets through his coat, and had two horses shot under him, and yet escaped unhurt. So bloody a contest has rarely been witnessed. Out of twelve hundred men, seven hundred and fourteen were either killed or wounded; of eighty-six officers, more than two-thirds were among the killed or wounded. Braddock was mortally wounded by a provincial named Fausett. The enemy lost only about forty men. They fought in deep ravines, and the balls of the English passed over their heads.

The remnant of Braddock's army, panic stricken, fled in great disorder to Fort Cumberland. The enemy did not pursue them.

Satiated with carnage and plunder, the Indians could not be tempted from the battle-field.

The army of Braddock had been carefully watched, by some Indian spies, from the time they left Fort Cumberland. There was no force in Fort Duquesne that could cope with the English, and the French commandant had expressed the necessity of either retreat or surrender. By accident, four or five hundred Indians happened to be at the fort of the French garrison. One officer of inferior rank, Capt. Beaujeau, strenuously urged that, for the honor of the French arms, some resistance should be made. Beaujeau consulted the Indians, who volunteered to the number of about four hundred. With much difficulty, the young hero obtained from his commander permission to lead out to a certain limit such French soldiers as chose to join in the desperate enterprise. Of the number, only about *thirty* volunteered, and with these four hundred and thirty men, the gallant Frenchman marched out to attack more than threefold their number.

In the meantime, Braddock rejected every remonstrance from Washington and other colonial officers with insult, and advanced into the snare just as far as the enemy desired, when destruction to the greater part of the army was almost the certain result.

When the victory was reported to the commandant at Fort Duquesne, his transports were unbounded. He received Beaujeau with open arms, loaded him with the most extravagant honors, and, in a few days, sent to report the victory to the Governor of Canada. But behold! when the dispatches were opened, they consisted of criminal charges against Beaujeau in his office of paymaster, and other charges equally culpable. Under these accusations, this injured man was tried, broke and ruined. So matters rested until, in the revolutionary war, the subject of Braddock's defeat happened to come into conversation between Washington and Lafayette, when the real facts were stated to the latter. He heard them with unqualified astonishment; but with his powerful sense of justice, determining to do all in his ability to repair what he considered a national act of cruelty and injustice, he took and preserved careful notes, and on his return to Europe, had inquiries made for Beaujeau. He was found in a state of poverty and wretchedness, broken down by advancing years and unmerited obloquy. The affair was brought before the government of France, and as the real events were made manifest, the officer was restored to his rank and honors.

To the foregoing account of the incidents of Braddock's defeat, we annex a few paragraphs from the narrative of Colonel James Smith, then a prisoner at Fort Duquesne.

Some time after I was there, I was visited by the Delaware Indian who was at the taking of me, and could speak some English. I asked him what news from Braddock's army? He said the Indians spied them every day, and he showed me, by making

marks on the ground with a stick, that Braddock's army was advancing in very close order, and that the Indians would surround them, take trees, and (as he expressed it) *shoot um down all one pigeon*.

Shortly after this, on the 9th day of July, 1755, in the morning, I heard a great stir in the fort. As I could then walk with a staff in my hand, I went out of the door, which was just by the wall of the fort, and stood upon the wall and viewed the Indians in a huddle before the gate, where were barrels of powder, bullets, flints, etc., and every one taking what suited; I saw the Indians also march off in rank entire—likewise the French Canadians, and some regulars. After viewing the Indians and French in different positions, I computed them to be about four hundred, and wondered that they attempted to go out against Braddock with so small a party. I was then in high hopes that I would soon see them fly before the British troops, and that General Braddock would soon take the fort and rescue me.

I remained anxious to know the event of this day; and, in the afternoon, I again observed a great noise and commotion in the fort, and though at that time I could not understand French, yet I found that it was the voice of joy and triumph, and feared that they had received what I called bad news.

I had observed some of the old country soldiers speak Dutch; as I spoke Dutch, I went to one of them, and asked him what was the news? He told me that a runner had just arrived, who said that Braddock would certainly be defeated; that the Indians and French had surrounded them, and were concealed behind trees and in gullies, and kept a constant fire upon the English, and that they saw the English falling in heaps, and if they did not take the river, which was the only gap, and make their escape, there would not be one man left alive before sundown. Some time after this, I heard a number of scalp-halloos, and saw a company of Indians and French coming in. I observed they had a great many bloody scalps, grenadiers' caps, British canteens, bayonets, etc., with them. They brought the news that Braddock was defeated. After that, another company came in, which appeared to be about one hundred, and chiefly Indians, and it seemed to me that almost every one of this company was carrying scalps; after this came another company with a number of wagon horses, and also a great many scalps. Those that were coming in, and those that had arrived, kept a constant firing of small arms, and also the great guns in the fort, which were accompanied with the most hideous shouts and yells from all quarters; so it appeared to me as if the infernal regions had broke loose.

About sundown I beheld a small party coming in with about a dozen prisoners, stripped naked, with their hands tied behind their backs, and their faces and part of their bodies blackened—these prisoners they burned to death on the bank of the Alleghany River, opposite to the fort. I stood on the fort wall until I beheld them

begin to burn one of these men: they had him tied to a stake, and kept touching him with fire-brands, red-hot irons, etc., and he screaming in the most doleful manner—the Indians, in the meantime, yelling like infernal spirits. As this scene appeared too shocking for me to behold, I returned to my lodging both sorry and sore.

When I came into my lodgings I saw Russel's Seven Sermons, which they had brought from the field of battle, which a Frenchman made a present of to me. From the best information I could receive, there were only seven Indians and four French killed in this battle, and five hundred British lay dead in the field, beside what were killed in the river on their retreat.

The morning after the battle I saw Braddock's artillery brought into the fort; the same day I also saw several Indians in British officers' dress, with sash, half moons, laced hats, etc., which the British then wore.

The result of this battle gave the French and Indians a complete ascendancy on the Ohio, and put a check to the British operations west of the mountains for two or three years. In 1757, the Shawnees, Cherokees, and Iroquois, in alliance with the French, penetrated even to the east side of the mountains, desolating the frontier settlements in blood. In the same autumn, the English built Fort Loudon, in what is now named Monroe county, East Tennessee: in the succeeding year, Col. Burd erected another fort on the Holston, one hundred miles north. Settlements arose around each of these posts.

Grant's Defeat.—In the year 1758, great preparations were made by the English for the reduction of the French posts. In July, an army of seven thousand men, under General Forbes, left Carlisle, Pennsylvania, destined for the reduction of Fort Duquesne. About the middle of September, the advanced guard, under Col. Boquet, having reached Loyal Hanna, in what is now Westmoreland county, that officer dispatched Major Grant to reconnoiter, with eight hundred Highland Scotch and two hundred Virginians, under Major Andrew Lewis, who subsequently commanded at the sanguinary battle of Point Pleasant.

As they drew near the fort undiscovered, Grant thought he could surprise the garrison, and thus disappoint his general of the honor of the conquest. Lewis in vain remonstrated against the folly of the attempt; but Grant, desirous of monopolizing all the honor, ordered Lewis with his provincials to remain behind with the baggage. Early in the morning Grant, with his Scotch Highlanders, advanced to the attack by beating drums upon Grant's Hill, as it was afterward called, within the site of Pittsburgh. This incautious bravado aroused the Indians, who, to the number of fifteen hundred, were lying on the opposite side of the river, and soon Grant was surrounded by an overwhelming number, when the work of death went on rapidly, and in a manner quite novel to the Scotch Highlanders, who, in all their European wars, had never

BURNING OF FRENCH MISSIONARIES.

"The assured countenance and confiding eye of Brobeuf still bore witness to his firmness. The voice of Lallemand was choked by the thick smoke; but the fire having snapped his bands, he lifted his hands to Heaven, imploring the aid of Him who is an aid to the weak."

before seen men's heads skinned. Major Lewis soon perceiving, by the retreating fire, that Grant was overmatched, came to the rescue with his provincials, and falling on the rear of the Indians, made way for Grant and some of his men to retreat; but his own party was overwhelmed by numbers. This action proved disastrous to the English, more than one-third of the whole force being killed. Grant and Lewis were both taken prisoners, and the remnant of the detachment was saved mainly through the bravery and skill of Captain Bullet, of the Virginia provincials, the only officer who escaped unhurt.

Col. Boquet, while remaining at Loyal Hanna with the advance, was shortly after twice attacked by the French and Indians with great vigor; but he successfully repulsed them, with a loss on his part of only sixty-seven in killed and wounded. The intrenchment he threw up at that place was afterward called Fort Ligonier.

In November, the commandant of Fort Duquesne, unable to cope with the overwhelming force approaching under Forbes, destroyed the fortress, and descended the Ohio and Mississippi to New Orleans. On his route he erected Fort Massac, on the Ohio, about forty miles from its mouth, in the Illinois country. General Forbes repaired Fort Duquesne and changed its name to Fort Pitt; on this spot now stands the flourishing city of Pittsburgh.

The English were now, for the first time, in possession of the whole Upper Ohio region. In the spring of 1759, they established posts on the eastern side of the Ohio, prominent among which was Fort Burd, on the site of Brownstown, Pennsylvania, later called Redstone Old Fort. They also soon had possession of Presque Isle, Detroit, and other French posts in that region.

While these events had been transpiring in the West, most brilliant successes had attended the English arms on the North. Ticonderoga, Crown Point, Fort Niagara, and Quebec were taken in 1759; the next year Montreal fell, and with it, the whole of Canada. By the treaty of Paris, in 1763, France relinquished all her claims to Canada, and the western country, east of the Mississippi, to Great Britain; to Spain, she ceded that west of the Mississippi.

THE CHEROKEE WAR OF 1760.

An important episode in the French and Indian war, which resulted in the loss of Canada and the West to that power, was the Cherokee war. Most of the prominent incidents of which occurred on or near the eastern and southeastern line of Tennessee.

The Cherokees occupied a beautiful and broad extent of country; one of fertile valleys, green meadows, sunny slopes, immense forests, girt about by mountains of giant grandeur, that alike served as natural fortresses, and to exclude them from the outer world.

They were a highly intellectual people, compared to most of the aborigines. They possessed fine fruit and corn fields; and their towns were generally fenced in. Beside the great natural strength of their position, their numerical force was large, for they had no less than sixty-four towns and villages, and were able, in an emergency, to send six thousand warriors into the field.

In 1756, the English sent deputies among the Cherokees to secure their aid against the French. A council was convened and likely to terminate favorably, when tidings suddenly came that a party of their nation, who had visited the French on the Ohio, were massacred by some Virginians, on their return home. Immediately the council was in an uproar, and it was not without the greatest exertions on the part of their renowned chief, Attakulla, that the deputies were saved from immediate death.

Great excitement succeeded this provocation. The older part of the nation remained calm, and Attakulla and Oconostota, or the Great Warrior, were both against the war; but the French emissaries instigated the younger warriors to take the field; parties of whom involved the frontiers in horrid devastation and massacre. Governor Lyttleton, of South Carolina, summoned the militia to meet at the Congarees to commence active hostilities. No sooner did the Cherokees hear of this movement, than they sent thirty-two of their chiefs, among whom was Great Warrior, to settle all differences at Charleston. Conference ensued, and the governor made a long speech of accusation, which he concluded by saying the chiefs must follow his troops, or he would not be answerable for their safety. Oconostota gravely rose to reply, but the governor forbade him to proceed: "he would hear no talk in vindication of the orator's countrymen, nor any proposals with regard to peace, but was determined to proceed with his expedition."

The Great Warrior and his brother deputies were indignant; with hearts open for peace they were grossly insulted. Nay, more, they were forcibly obliged to accompany the governor to the Congarees, where were collected one thousand four hundred men; and when the expedition started on its march, a guard was placed over them to prevent their escape. On reaching Fort George, which stood on the Isundiga River, about three hundred miles from Charleston, on the borders of the Cherokee country, the chiefs were placed in close confinement.

As his troops were becoming discontented and mutinous, the governor dared not advance any farther, and sent for Attakulla, the steady friend of the English, and the wisest man of the nation. He obeyed the summons, and a conference took place on the 17th of December, 1759. The governor declared his readiness for peace but on the condition that twenty-four of the Cherokees should be delivered up to be put to death, or otherwise disposed of at option, as an atonement for that number of Carolinians massacred in the late foray of the savages. These terms were accepted; but as soon as they were known the mass of the Cherokees fled to

the mountains, and the number of hostages could only be secured by detaining twenty-two of the chiefs already in custody.

No sooner had the governor disbanded his forces than the Cherokees determined to violate a treaty so unjustly extorted, sounded the warhoop, killed fourteen whites within a mile of Fort George. This was followed up by a stratagem by which Oconostota, who had been released, aimed to take possession of the fort. Pretending to have something of importance to communicate to the commander, he dispatched a woman who had usually obtained access to the station to solicit an interview with the commandant on the bank of the river. Cotymore imprudently assented, and accompanied by two officers, walked down to the river; from the opposite side of which Oconostota addressed him. While they spoke, the Indian waved a bridle over his head as a signal to his ambushed warriors. They fired; Cotymore fell dead, and his companions were wounded. But the Cherokees failed to get possession of the fort. Suspecting a concerted movement among the hostages, by which they would co-operate with the assailing foe without, the officers in the fort gave orders to secure them with irons. The Indians resisted with arms, and stabbing three of the soldiers, so exasperated the rest, already excited by the murder of their captain, that they fell upon the miserable captives, and butchered them to a man.

There were but few men in the Cherokee nation that did not lose a friend or relation in this massacre. All, with one voice, cried for war: "the spirits of their murdered brothers were hovering around them, and calling out for vengeance on their enemies." Large parties rushed down upon the defenseless frontiers of Carolina, and men, women, and children fell a prey to their merciless fury. Some, who escaped the scalping-knife, starved to death in the forests; others, borne into captivity, suffered incredible hardships. Every day brought fresh accounts of their ravages and murders.

Great alarm prevailed throughout the Carolinas, and troops were raised for the protection of the frontiers, and with the others, General Amherst sent twelve companies of British regulars to the theater of hostilities. In May, 1760, the campaign commenced with a rapid invasion of the Cherokee territory; considerable ravages were speedily made; Estatoe and Keowee, the latter containing two hundred houses, were burnt; the army then marched to the relief of Fort George.

And now the war grew fervid. Saloueh and Fiftoc had sworn vengeance over the ashes of their homes, and the soul of the Great Warrior was hot within him. The invaders were suffered to pursue their hazardous and difficult march, through dark thickets and deep defiles, and over mountains, rivers, and swamps, until within five miles of Etchoe. Here was a low valley covered so thick with bushes that the soldiers could scarcely see three yards before them. The army was obliged to pass through it, and that in such a

manner as to permit but a few troops to act together. An officer was ordered to advance and scour the thicket with a company of rangers. A sudden discharge of fire-arms laid him dead with several of his soldiers. The grenadiers and light infantry now charged the enemy, a heavy fire commenced on both sides, and the woods rang with the warriors' whoop, the ring of musketry, the shouts of the soldiery, and the groans of the dying. The action lasted more than an hour; the English losing in killed and wounded almost a hundred men, when the Indians slowly retreated and disappeared, carrying off the bodies of their slain. Upon viewing the ground, all were astonished at the judgment shown in its selection; the most experienced officer could scarce have fixed upon a more advantageous spot for attacking an enemy. Orders were immediately given for an expeditious retreat.

Thus Oconostota succeeded in the field. But his heart still thirsted for blood. Fort Loudon, in what is now Monroe county, Tennessee, was besieged, with its garrison of two hundred men. They were reduced to the horrors of famine, being obliged to consume their horses and dogs for food. It was not until then that the commandant agreed to capitulate upon condition that the garrison should be permitted to march out with their arms to the nearest white settlements. On the 7th of August, the fort was surrendered, and the troops had proceeded one day's march up the Tellico, about fifteen miles on the way to Fort George. Here, on the banks of the river, at daybreak next morning, they were surrounded and attacked by nearly five hundred warriors; with the most horrid yells they rushed, tomahawk in hand, upon the feeble and emaciated troops. At the first fire, the commandant and thirty men fell, and the greater portion of the remainder were massacred on the spot. The residue either fled or were captured, and the latter pinioned and sent back to Fort Loudon. Among the latter was a Captain Stuart, who before the war had been a friend of Attakulla. This chief had taken no part in the war. He came forward and claimed him as his prisoner, and at the first opportunity magnanimously assisted him to escape.

The spring of 1761 opened with new efforts, upon the part of the English, so that by the 27th of May, two thousand six hundred men mustered at Fort George, with whom were numbers of Chickasaws and Catawbias.

Latinac, a French officer, was at this time among the Cherokees, inciting them to war. He persuaded them that the English would be satisfied with nothing else than to exterminate them, man, woman and child, from the face of the earth. He gave them arms too, and urged them to war. At a grand meeting of the nation, he brandished his hatchet, and striking it furiously into a log of wood, cried out: "Who is the man that will take this up for the King of France? Where is he? Let him come forth!" Saloueh, the young warrior of Estatoe, instantly leaped forward, laid hold of it, and cried out: "I will take it up. I am for war. The

spirits of the slain call upon us. I will avenge them, and who will not? He is no better than a woman who refuses to follow me." Fierce looks and uplifted tomahawks answered this appeal, and again the war torrent rushed down upon the frontiers.

The English commenced their march into the interior on the 7th of June, and advanced unmolested as far as the well-remembered battle-ground of the year previous; but there the Indian scouts in front observed a large body of Cherokees posted upon a hill on the right flank of the army. Immediately the savages, rushing down, began to fire upon the advanced guard, which being supported, repulsed them; but they recovered the heights. Colonel Grant ordered a party to march up the hills, and drive the enemy from them. The engagement became general, and was fought on both sides with great bravery. The situation of the troops, in several respects, was deplorable—fatigued by a tedious march in rainy weather; surrounded by woods so that they could not discern the enemy; balked by the scattering fire of the savages, who, when pressed, always fell back, but rallied again. No sooner was any advantage gained over them in any one quarter, than they appeared in another. While the attention of the commander was occupied in driving the enemy from their lurking-place on the river's side, his rear was attacked, and so vigorous an effort made for his cattle and flour, that he was obliged to order a party back to the relief of the rear-guard. From eight o'clock in the morning until eleven, the savages continued to keep up an incessant fire, sometimes from one place, sometimes from another, while the woods resounded with the hideous warhoops. At length the Cherokees gave way and were pursued. The English loss was about sixty in killed and wounded; that of the Cherokees was unknown.

Now commenced a scene of devastation scarcely paralleled in the annals of the continent. For thirty days the army employed themselves in burning and ravaging the country and settlements of the now broken-spirited Cherokees. No less than fourteen of their towns shared the fate of Etchoe. Their granaries were yielded to the flames, their cornfields ravaged, while the miserable fugitives, flying from the sword, took refuge with their almost starving families among the mountains—their only sustenance for most of the time being horseflesh.

The celebrated Francis Marion, then a subordinate officer in this campaign, in writing to a friend, gives the following touching and picturesque account:—We arrived at the Indian towns in the month of July. As the lands were rich, and the season had been favorable, the corn was bending under the double weight of luscious ears, and pods, and clustering beans. The furrows seemed to rejoice under their precious loads—the fields stood thick with bread. We encamped the first night in the woods, near the fields, where the whole army feasted on the young corn, which, with fat venison, made a most delicious treat. The next morning

we proceeded, by order of Colonel Grant, to burn down the Indian cabins. Some of our men seemed to enjoy this cruel work, laughing very heartily at the curling flames as they mounted, loud crackling, over the tops of the huts. But to me it appeared a shocking sight. "Poor creatures!" thought I, "we surely need not grudge you such miserable habitations." But when we came, according to orders, to cut down the fields of corn, I could scarcely refrain from tears. For who could see the stalks that stood so stately, with broad green leaves, and gaily tasseled shocks, filled with sweet milky fluid and flour, the staff of life—who, I say, without grief, could see these sacred plants sinking under our sword, with all their precious load, to wither and rot untasted in the morning fields!

I saw everywhere around the footsteps of little Indian children, where they had lately played under the shelter of the rustling corn. No doubt they had often looked up with joy to the swelling shocks, and gladdened when they thought of their abundant cakes for the coming winter. When we are gone, thought I, they will return, and peeping through the weeds with tearful eyes, will mark the ghastly ruin poured over their homes, and the happy fields where they had so often played.

The result of these measures was decisive. No sooner had the army reached Fort George, than a deputation of chiefs visited the camp to sue for peace. Among them was Attakulla, who thus addressed Colonel Grant:

You live at the water side, and are in light. We are in darkness; but hope all will be clear. I have been constantly going about doing good; and though I am tired, yet I am come to see what can be done for my people, who are in great distress. As to what has happened, I believe it has been ordered by our Father above. We are of a different color from the white people. They are superior to us. But one God is Father of us all, and we hope what is past will be forgotten. God Almighty made all people. There is not a day but that some are coming into and others going out of the world. The Great King told me the path should never be crooked, but open for every one to pass and repass. As we all live in one land, I hope that we shall all live as one people.

Peace was formally ratified, and both expressed the hope that it might last as long as the sun would shine and the rivers run.

THE PONTIAC WAR.

In the year 1760, the French yielded to the English power in Canada and on the western waters. Three days after the fall of Montreal, Major Rogers was dispatched with forces to take possession of the French posts along the southern shore of Lake Erie, and at Detroit.

At this period, there sprung upon the stage the most remarkable Indian in the annals of history. It was Pontiac, the chief of the Ottawa tribe, and principal sachem of the Algonquin Confederacy. He was distinguished for his noble form, commanding address, and proud demeanor. To these qualities, he united a lofty courage, and a pointed and vigorous eloquence, that won the confidence of all the lake Indians, and made him a marked example of that grandeur and sublimity of character sometimes found among the savages of the American forests. He had jealously watched the progress of the English arms, and their rapid encroachments upon the lands of his people.

When Pontiac first heard of the approach of Rogers with a detachment of English troops, he roused like a lion from his den, and dispatched a messenger, who met Rogers on the 7th of November at the mouth of Chogage River, with a request to halt until Pontiac, the king of the country, should come up. At the first salutation Pontiac demanded of Rogers the business on which he came, and asked him how he dared to enter his country without his permission. He was informed by Rogers, that he had no design against the Indians; his only object being to remove the French out of the country, who had been an obstacle in the way of mutual peace and commerce between the Indians and English. The next morning, Pontiac and the English commander, by turns, smoked the calumet, and Pontiac informed Rogers that he should protect his party against the attacks of the Indians who were collected to oppose his progress at the mouth of Detroit River.

Rogers having obtained peaceable possession of Detroit, made peace with the neighboring tribes, and leaving Captain Campbell in charge of the fort, departed on the 21st of December for Pittsburgh.

The Indians in this region at first regarded the English as intruders, and the smile which played upon the countenance of Pontiac when he first met the detachment of Rogers on the shore of Lake Erie, only tended to conceal a settled hatred—as the setting sunbeam bedazzles the distant thundercloud. He had made professions of friendship to the English as a matter of policy, until he could have time to plot their destruction.

The plan of operations adopted by Pontiac for effecting the extinction of the English power, evinced extraordinary genius, courage, and energy of the highest order. It was a sudden and contemporaneous attack upon all the British posts upon the Lake—at St. Joseph, Ouiatenon, Green Bay, Michilimackinac, Detroit, the Maumee, and the Sandusky—and also upon the forts at Niagara, Presque Isle, Le Bœuf, Venango, and Pittsburgh; the last four of which were in Western Pennsylvania. If the surprise could be simultaneous, so that every English banner which waved upon a line of thousands of miles, should be prostrated at the same moment, the garrisons would be unable to exchange assistance; while on the other hand, the failure of one Indian detachment would have

no effect to discourage the other. Probably the war might begin and terminate with the same single blow ; and then Pontiac would again be the lord and king of the broad land of his ancestors.

He first called together the Ottawas, and the plan was disclosed and enforced with all the cunning and eloquence he could master. He appealed to their fears, their hopes, their ambition, their patriotism, their hatred of the English, and their love for the French. Having warmly engaged them to the cause, he assembled a grand council of the neighboring tribes at the River Aux Ecorces. With a profound knowledge of the Indian character, aware of the great powers of superstition over their minds, he related, among other things, a dream, in which he said the Great Spirit had secretly disclosed to a Delaware Indian, the conduct he expected his red children to pursue. This dream was strikingly coincident with the plans and projects of the chieftain himself. "And why," concluded the orator, "why, said the Great Spirit indignantly to the Delaware, do you suffer those dogs in red clothing to enter your country, and take the land I have given you? Drive them from it! Drive them! When you are in distress, I will help you."

The effect of this speech was indescribable. The name of Pontiac alone was a host ; but the Great Spirit was for them—it was impossible to fail. A plan of campaign was concerted on the spot, and for a thousand miles on the lake frontiers, and even down to the borders of North Carolina, the tribes joined in the grand conspiracy.

Meanwhile peace reigned on the frontiers. The unsuspecting traders journeyed from village to village ; the soldiers in the forts shrunk from the sun of early summer, and dozed away the day ; the frontier settler singing in fancied security, sowed his crop, or watching the sun set through the girdled trees, mused upon one more peaceful harvest, and told his children of the horrors of the long war, now—thank God!—over. From the Alleghanies to the Mississippi, the trees had leaved, and all was calm life and joy. But even then, through the gloomy forests journeyed bands of sullen red men—like the gathering of dark clouds for a horrid tempest.

Surprise of the English Forts.—The Maumee post, Presque Isle, Niagara, Pitt, Ligonier, and every English fort, was hemmed in by mingled tribes. At last the day came. The traders everywhere were seized with their goods, and more than one hundred put to death. Nine British forts yielded instantly, and the savages drank, "scooped up in the hollow of joined hands," the blood of many a Briton. More than twenty thousand people were driven from their homes, and horrible, unparalleled devastations committed on the frontiers of Virginia, Pennsylvania, and New York. Most, if not all of the forts which fell, were taken by stratagem—preconcerted by the master mind of Pontiac. Generally the commanders were secured by parties admitted into the forts under the pretense of business or friendship. At Maumee the officer was betrayed by

a squaw, who, by piteous entreaties, persuaded him to go some two hundred yards with her to the succor, as she stated, of a wounded man who was dying; the Indians waylaid and shot him.

In some few of the forts individuals escaped; but too generally all were massacred. At Presque Isle three Indians appeared in holiday dress, and persuaded the commander and clerk to accompany them to the canoes of their hunting party, as they said; about a mile distant, to examine and purchase a lot of peltries. In their absence about one hundred and fifty Indians advanced toward the fort, each with a bundle of furs on his back, which they stated the commandant had bought and ordered them to bring in. The stratagem succeeded. When they were all within the fort, the work of an instant threw off the packs and the short cloaks which covered their tomahawks, scalping knives, and rifles, the last having been sawed off short for concealment. Resistance was useless, and the work of death and torture rapidly proceeded, until all, except two of the inmates of the garrison, had passed to the eternal world.

The forts of Bedford, Ligonier, Pitt, and Detroit, were saved with great difficulty. The Indians invested Fort Pitt with a strong force; information of which having been conveyed to Lord Amherst, he dispatched Colonel Boquet to its relief with two regiments of regulars. He was fiercely attacked at Bushy Run by the Indians, and lost over one hundred men in killed and wounded; but he defeated the savages, though with great difficulty, and succeeded in saving the fort. Fort Ligonier was bravely defended by Lieutenant Blane and his little garrison.

Massacre at Michilimackinac.—The particulars of the taking of Michilimackinac are more fully known. That fort, standing on the south side of the strait connecting Lakes Huron and Michigan, was one of the most important posts on the frontier. It was the great place of deposit and departure between the upper and lower countries, the great assembling point of the Indian traders on their voyages to and from Montreal. There were about thirty houses and families within the inclosure of the stockade, and the garrison, under the command of Major Etherington, numbered between ninety and one hundred men.

The capture of this important station was intrusted to the Chippewas, assisted by the Sacs. The *King's birth-day*, the 3d of June, having arrived, a game of *baggatiway* was proposed by the Indians. This is played with a bat and ball; the former being about four feet long, curved, and terminating in a sort of racket. Two posts are placed in the ground, half a mile or a mile apart. Each party has its post, and the game consists in throwing up to the adversary's post, the ball which at the beginning is placed in the middle of the course.

The policy of this expedient for surprising the garrison will appear clearly, when it is understood that the game is necessarily attended with much violence and noise, and in the ardor and heat of the contest would be diverted in any direction that the successful

party should choose. The design of the Indians in this case was to throw the ball over the pickets, and in the excitement of the game, it was but natural that all the Indians should rush after it. The Indians had persuaded as many as possible of the garrison and settlers to come voluntarily without the pickets for the purpose of witnessing the game which was said to be played for a high wager. Among these was Major Etherington, the commandant, who laid a wager on the side of the Chippewas. Not fewer than four hundred Indians were engaged on both sides, and consequently, when possession of the fort was once gained, the situation of the English must be desperate indeed. The match commenced without the fort with great animation. Henry, an Indian trader, who gives the account, had been occupied within the fort about half an hour writing, when he suddenly heard a loud Indian war-cry, and a noise of general confusion. Going instantly to his window, he saw a crowd of Indians within the fort, furiously cutting down and scalping every Englishman they found; and he could plainly witness the last struggles of some of his particular acquaintances.

He had in the room a fowling-piece loaded with swan shot. This he immediately seized and held it for a few minutes, expecting to hear the fort drum beat to arms. In this dreadful interval, he saw several of his countrymen fall; and more than one struggling between the knees of the savages, who, holding them in this manner, scalped them while yet alive. At length, disappointed in the hope of seeing any resistance made on the part of the garrison, and sensible that no effort of his single arm could avail against four hundred Indians, he turned his attention to his own safety. Seeing several of the Canadian villagers looking out composedly upon the scene of blood—neither opposing the Indians, nor molested by them—he conceived the hope of finding security in one of their houses. He immediately climbed over a low fence, separating his door yard and that of his next neighbor, Monsieur Langlade. Entering his house precipitately, he found the whole family gazing upon the horrible spectacle before them. He begged M. Langlade to put him in some place of safety until the heat of the affair should be over, an act of charity which might preserve him from the general massacre. Langlade looked at him for a moment while he spoke, and then turned again to the window, shrugging his shoulders, and intimating that he could do nothing for him.

Henry was now ready to despair; but at this moment, a Pani woman, a slave of M. Langlade beckoned him to follow her. She guided him to a door which she opened, desiring him to enter, and telling him that it led to the garret, where he must go and conceal himself. Scarcely yet lodged in this shelter, such as it was, Henry felt an eager desire to know what was passing without. His desire was more than satisfied by his finding an aperture in the loose board walls of the house, which afforded him a full view of the

area of the fort. Here he beheld with horror, in shapes the foulest and most terrible, the ferocious triumphs of the savages. The dead were scalped and mangled; the dying were writhing and shrieking under the unsatiated knife and the reeking tomahawk; and from the bodies of some ripped open, their butchers were drinking the blood, scooped up in the hollow of joined hands, and quaffed amid shouts of rage and victory. In a few minutes, which seemed to Henry scarcely one, every victim who could be found, being destroyed, there was a general cry of "*all is finished*;" and at this moment, Henry heard some of the savages enter Langlade's house. He trembled and grew faint with fear.

As the floor consisted only of a single layer of boards, he overheard everything that passed. The Indians inquired on entering, if there were any Englishmen about. M. Langlade replied, that he could not say—he did not know of any—as in fact he did not—"they could search for themselves, and be satisfied." The state of Henry's mind may be imagined, when immediately upon this reply, the Indians were brought to the garret door. Luckily some delay was occasioned—through the management of the Pani woman—she had locked the door, and perhaps it was by the absence of the key. Henry had sufficient presence of mind to improve these few moments in looking for a hiding-place. This he found in the corner of the garret, among a heap of such birch bark vessels as are used in making maple sugar; and he had not completely concealed himself when the door opened, and four Indians entered, all armed with tomahawks, and all besmeared with blood from head to foot.

The die appeared to be cast. Henry could scarcely breathe, and he thought that the throbbing of his heart occasioned a noise loud enough to betray him. The Indians walked about the garret in every direction; and one of them approached him so closely, that at one moment, had he put forth his hand, he must have touched him. Favored, however, by the dark color of his clothes, and the want of light in the room, which had no window, he still remained unseen. The Indians took several turns about the room—entertaining M. Langlade all the while with a minute account of the proceedings of the day; and at last returned down stairs. There was at the time a mat in the room, and Henry fell asleep; and he was finally awakened by the wife of Langlade, who had gone up to stop a hole in the roof. She was surprised to see him there—remarked that the Indians had killed most of the English, but that he might hope to escape. He lay there during the night.

At length the wife of Langlade informed the Indians of Henry's concealment, fearing, as she subsequently alleged, that if they should find him secreted in her house, they would destroy her and her children. Unlocking the door, she was followed by half a dozen savages, naked down to their waist, and intoxicated. On entering, their chief, *Wenniway*, a ferocious savage, of gigantic stature, advanced with lips compressed, seized Henry by one hand,

and with the other held a large carving-knife, as if to plunge it into his heart, while his eyes were steadfastly fixed on his. Gazing for a moment, he dropped his arm and said, "I won't kill you." He then at once adopted him in the place of a brother whom he had lost in the wars with the English, and Henry was eventually ransomed.

Seventy of the troops were massacred, and of these the bodies of several were boiled and eaten. The remainder, together with those taken at the fall of forts St. Joseph and Green Bay, were restored after the war.

Siege of Detroit.—Detroit was a more important situation even than Michilimackinac. Beside, an immense quantity of valuable goods to the amount, it is stated, of over two millions of dollars, was known to be stored there. If captured, it would unite the hitherto separate lines of operation pursued by the Indian tribes above and below. Under these circumstances its reduction was undertaken by Pontiac in person. The garrison numbered one hundred and thirty, including officers, beside whom there were something like forty individuals in the village engaged in the fur trade.

Such was the situation of Detroit when the Ottawa chieftain having completed his arrangements, on the 8th of May, presented himself at the gates of the town with a force of about three hundred Indians, chiefly Ottawas and Chippewas, and requested a council with Major Gladwyn, the commandant. He expected, under this pretext, to gain admittance for himself and a considerable number of attendants, who accordingly were provided with rifles sawed off so short as to be concealed under their blankets. At a given signal, which was to be the presentation of a wampum belt in a particular manner by Pontiac to the commandant during the conference, the armed Indians were to massacre all the officers, then open the gates to admit the main body of the warriors, who were to be waiting without for the completion of the slaughter and destruction of the fort.

An Indian woman betrayed the secret. She had been employed by the commandant to make him a pair of moccasins out of elk skin, and brought them into the fort finished on the evening of the day on which Pontiac made his appearance and application for a council. The major paid her generously, requested her to make more from the residue of the skin, and then dismissed her. She went to the outer door, but there stopped and loitered about as if her errand was still unperformed. A servant asked her what she wanted, but she made no answer. The major himself observed her and ordered her to be called in, when, after some hesitation, she replied to his inquiries, that as he had always treated her kindly, she did not like to take away the elk skin which he valued so highly—she could *never bring it back*. The commandant's curiosity was, of course, excited, and he pressed the examination

until the woman at length disclosed everything which had come to her knowledge.

Her information was not received with implicit credulity, but the major thought it prudent to employ the night in taking active measures for defense. A strict guard was kept upon the ramparts during the night, it being apprehended that the Indians might anticipate the preparations now known to have been made for the next day. Nothing, however, was heard after dark, except the sound of singing and dancing in the Indian camp, which they always indulged in upon the eve of any great enterprise.

In the morning, Pontiac and his warriors sang their war-song and danced their war-dance, and then repaired to the fort. They were admitted without hesitation, and conducted to the council house, where Major Gladwyn and his officers were prepared to receive them. They perceived at the gate, and as they passed through the streets, an unusual activity and movement among the troops. The garrison was under arms, the guards doubled, and the officers were armed with swords and pistols. Pontiac inquired of the British commander, what was the cause of this unusual appearance. He answered that it was proper to keep the young men to their duty, lest they should become idle and ignorant. The business of the council then commenced, and Pontiac proceeded to address Major Gladwyn. His speech was bold and menacing, and his manner and gesticulations vehement, and they became still more so as he approached the critical moment. When he was upon the point of presenting the belt to Major Gladwyn, and all was breathless expectation, the drums at the door of the council house suddenly rolled the charge, the guards leveled their pieces, and the officers drew their swords from their scabbards. Pontiac, whose eagle eye had never quailed in battle, turned pale and trembled. This unexpected and decisive proof that his treachery was discovered entirely disconcerted him. He delivered the belt in the usual manner, and thus failed to give his party the concerted signal of attack; while his warriors stood looking at each other in astonishment, Major Gladwyn immediately approached Pontiac, and drawing aside his blanket, discovered the shortened rifle, and then, after stating his knowledge of his plan, advised him to leave the fort before his young men should discover their design and massacre them. He assured him, as he had promised him safety, that his person should be held unharmed until he had advanced beyond the pickets. The Indians immediately retired, and as soon as they had passed the gate, they gave the yell and fired upon the garrison. Several persons living without the fort were then murdered, and hostilities commenced.

The cannibalism of the savages, at this time, may be learned from the fact, that a respectable Frenchman was invited to their camp to partake of some soup. Having finished his repast he was told that he had eaten a part of an English woman, a Mrs.

Turnbell, who had been among the victims; a knowledge that, probably, did not improve his digestion.

The savages soon stationed themselves behind the buildings, outside the pickets, and kept up a constant, though ineffectual fire upon the garrison. All the means which the savage mind could suggest were employed by Pontiac to demolish the settlement of Detroit. During the siege, which lasted more than two months, the savages endeavored to make a breach in the pickets, and aided by Gladwyn, who, as a stratagem, had ordered his men to cut also on the inside, this was soon accomplished, and the breach immediately filled with Indians. At this instant a cannon was discharged upon the advancing savages, which made destructive havoc. After that period the fort was merely invested; supplies were cut off, and the English were reduced to great distress from the diminution of their rations and the constant watchfulness required to prevent surprise.

While the siege was in progress, twenty batteaux with ninety-seven troops and stores, on their way from Niagara to Detroit, arrived at Point Pelee, on Lake Erie, about fifty miles easterly from Detroit. Apprehending no danger, the troops landed and encamped. The Indians, who had watched their movements, attacked them about dawn of day, and massacred or took prisoners all except thirty, who succeeded in escaping in a barge across the lake to Sandusky Bay. The Indians placed their prisoners in the batteaux, and compelled them to navigate them on the Canadian side of the lake and river, toward Detroit. As the fleet of boats was discovered coming around the point of the Huron Church, the English assembled on the ramparts to witness the arrival of their friends; but they were only greeted by the death-song of the savages, which announced their fate. The light of hope flickered on their countenances only to be clouded with the thick darkness of despair. It was their barges, but they were in possession of the savages, and filled with the scalps and prisoners of the detachment. The prisoners, with the exception of a few who escaped when opposite the town, were taken to Hog Island, above Detroit, massacred and scalped.

A few weeks after, a vessel from Niagara with sixty troops, provisions, and arms, entered Detroit River. For the purpose of boarding her as she ascended, the Indians repaired to Fighting Islands, just below the city, which she soon reached, and then, for want of wind, was obliged to anchor. The captain concealed his men in the hold, and in the evening, the Indians proceeded in silence to board the vessel from their canoes, while the men on board were required to take their stations at the guns. The Indians approached near the side, when the signal for a discharge was given by a blow upon the mast with a hammer. Many of the Indians were killed and wounded, and the remainder, panic stricken, paddled away in their canoes with all speed. After this, Pontiac endeavored to burn the vessels that lay anchored before Detroit, for

which object he made an immense raft from several barns, which he pulled down for that purpose, and filled it with pitch and other combustibles. It was then towed up river and set on fire, under the supposition that the current would float the blazing mass against the vessels. The English foiled this attempt by anchoring boats, connected by chains, above their vessels.

During the siege, the body of the French people around and in Detroit were neutral. Pontiac, in a speech of great eloquence and power, endeavored to persuade them to join his cause; but his solicitations did not prevail, and shortly after, on the 3d of June, the French had a double reason for maintaining neutrality in the news which they received of the treaty of peace, by which France ceded their country to England.

On the 29th of July, three hundred regular troops, under Captain Dalyell, arrived, in gun-boats, from Canada. On the night of the 30th, Captain Dalyell, with over two hundred men, attempted to surprise Pontiac's camp. That chieftain having by some means been apprised of the contemplated attack, was prepared, and lay in ambush with his Indians, concealed behind high grass, at the Bloody Bridge, one and a half miles above Detroit. As the English reached the bridge, a sudden and destructive fire was poured upon them. This threw them into the utmost confusion. The attack in the darkness, from an invisible force, was critical. The English fought desperately, but were obliged to retreat, with the loss of their commander, and over sixty in killed and wounded.

The operations of Pontiac in this quarter soon called for the efficient aid of government, and during the season, General Bradstreet arrived to the relief of the posts on the lakes, with an army of three thousand men. The tribes of Pontiac, excepting the Delawares and the Shawanese, finding that they could not successfully compete with such a force, laid down their arms and made peace. Pontiac, however, took no part in the negotiation, and retired to Illinois, where he was, a few years after, assassinated by an Indian of the Peoria tribe.

THE FIRST SPANISH GOVERNOR OF LOUISIANA.

IN the latter part of the French War, Spain joined with France against Great Britain, through alarm at the increasing power of Britain in America. The consequences of this step were very serious to her, as by it she lost Havana, the key to the Gulf of Mexico. The treaty of Paris, concluded in 1763, restored Havana to Spain, though to regain it she was obliged to cede Florida to England.

By a secret article of this treaty, as a compensation for the loss of Florida, Louis XV engaged to relinquish to Spain his remaining Louisiana possessions. For awhile this was kept secret from

the people of the colony; but when it was known, such was their attachment to the mother country, that they were thrown into utter despair. Several years elapsed ere Spain took formal possession. In the meantime, the colonists in vain sent commissioners to the court of France to have the obnoxious feature of the treaty annulled.

In 1766, Don Ulloa, who had been appointed Governor by Spain, arrived at New Orleans, with two companies of infantry, to take possession in the name of his king; but actuated by an incomprehensible obstinacy, he refused to show to the Superior Council the proofs of his mission. At last that body, conforming to the wishes of the people, as expressed by public meetings and petitions, insisted that Ulloa should either produce his credentials from the Spanish king, that they might be duly registered and promulgated through the province, or leave it within a month. The citizens took up arms to enforce the demand, and Ulloa embarked his troops on board of a Spanish vessel, and left the country.

In July, 1769, the hopes that the colonists still entertained that France would retain Louisiana, were crushed by the tidings that Captain-General O'Reilly was at the mouth of the Mississippi with a fleet, having on board four thousand nine hundred Spanish troops.

The colonists seeing that there was no alternative but submission, made choice of three representatives, Lafreniere, Grandmaison and Marent, to signify to the Spanish commander the submission of the colony; accompanied by a request, however, that those who wished to leave the country, should be allowed two years to dispose of their property. O'Reilly received the deputies with affability; assured them that he should cheerfully comply with all reasonable demands, that those who were willing to remain, should enjoy a mild and paternal government; and, in regard to past offenses, the perfidious commander added that he was disposed to forget them, and had come not to punish, but to pardon.

This declaration somewhat calmed the excitement of the people, and they prepared to receive the Spanish general with decent respect.

The next day he landed at the head of his troops, and they marched in battle array to the parade-ground, where Aubry, with the French garrison, was waiting to receive them. The white flag of France, which was waving on a high pole, was now slowly lowered, and that of Spain hoisted in its place, while the troops of both nations kept up an irregular discharge of small arms. Thus ended the dominion of the French on the shores of the Mississippi, where they had ruled for seventy years; and Louisiana became a dependency of Spain.

The new Spanish governor was by birth an Irishman, who, going to Spain with a body of Irish troops, had been so successful in gaining the king's favor, that he loaded him with honors and ben-

efits. He was a small man, and as mean in disposition as in stature: thin and lame, but with something striking, though disagreeable, in his appearance. He was vindictive in his character, and his ambition knew no bounds. For some unknown reason he entertained a violent hatred against the French, which led him to acts of unexampled barbarity. He came to Louisiana with the title of governor and captain-general; and being clothed with unlimited power, he abused his short-lived authority in every possible manner. He took upon him the state of a sovereign; had his throne, his levees, his guards, who constantly attended him; and he did not want for courtiers.

His first public act was to take the census of the city. This was soon done, as the town contained only 3190 inhabitants. He next ordered the arrest of Foucault, intendent of the colony, Lafreniere, the attorney-general, Noyant, his son-in-law, and Boisblanc, both members of the Superior Council. They were attending the levee of the tyrant, when requesting them to step into an adjoining apartment, he delivered them over to a party of soldiers, who immediately put them in irons. A few days after, Marquis, Doucet, Petit, Marent, Caresse, Poupet, and the two Milhets, were added to the number of prisoners.

Villere was now the only victim wanting; and he was the most important one, as he had been at the head of all the most violent measures. It was no easy matter for O'Reilly to get him into his power, as on hearing of the submission of New Orleans, he had retired to his plantation in the parish of St. Charles, in the midst of friends who detested the Spaniards no less cordially than he did himself. He was, however, on the point of taking refuge with the English at Manchac, lest he might implicate his neighbors, when he received a letter from Aubry, assuring him that he might return to New Orleans without danger, and that he would be security for his safety.

On the faith of this promise he came to New Orleans, and fearlessly presented himself before the governor. But he had no sooner entered the house and began to mount the stairs, than the guards stationed there descended each one step as he ascended one, with the design of closing in after him. He stopped for a moment on the second step: he was a man of uncommon strength, and there were as yet but two soldiers behind him. It was but for a moment he hesitated; with a disdainful smile he surveyed the living chain forming around him, and came into the presence of the governor with the air rather of a superior than a culprit. O'Reilly, hardened as he was in cruelty, seemed to feel some compunction at the thought of murdering such a man.

Villere was accompanied by a friend who was willing to share his danger. This was an old Swedish officer who had fought under Charles XII, and at the battle of Pultowa had received eleven wounds, all in facing the enemy. At the sight of this venerable old man, whose gray hairs seemed to give a sanction to the rebellion,

O'Reilly flew into a violent passion, and exclaimed, "I ought to hang you also on the highest gibbet that can be found." "Do so," replied the old soldier; "the rope cannot disgrace this neck;" and baring his bosom, he exhibited the scars of his wounds, when the tyrant shrunk from the sight, and the old man was released.

Villere was sent a prisoner on board of a vessel at anchor in the Mississippi. He had been there but a short time, and was in the cabin quietly conversing with the captain, when a boat passed with a female in it: she was in tears, and he recognized her as his wife. She had heard of his danger, and was then hastening to join him at New Orleans. His first impulse was to make himself known, and the sympathizing captain offered to hail the boat; but Villere recollecting himself, prevented him. "No," said he; "the sudden shock of seeing me in this situation would kill her;" and he remained calmly watching the boat as it bore her from his sight. But the effort to repress his feelings had been more than he could bear; the blood rushed to his brain; and, seized with sudden frenzy, he flew to the deck and attacked the Spanish guards. The captain followed in haste, and called to the guards not to injure him; but it was too late: he had already received their bayonets in his body, and only recovered his senses to know that he was dying.

The captain finding all assistance useless, could only offer to fulfill his last commands. "Promise me, then," said Villere, "that you will give these blood-stained garments to my children; and tell them that it is my last command that they never bear arms for Spain or against France." The captain did as he was requested, and the children of Villere faithfully obeyed the dying injunction of their father.

The other prisoners were immediately brought to trial. The charge against them was founded on a law of Alphonso XI, punishing with death and confiscation of property all persons guilty of rebellion against the king or the State; or in other words, all who should take up arms for their rights and liberties; and accomplices were subject to the same penalties.

Foucault and Brault maintained that they owed no account of their conduct but to the King of France, whose subjects they never ceased to be. The first was sent to Paris, the second acquitted.

The other prisoners also pleaded, but to no purpose, the incompetency of the tribunal before which they had been brought. In vain did they allege that they could not be declared rebels against Spain for anything they might have done while the French flag yet waved over the colony; that they owed no submission to Spain until her representative had exhibited his credentials; and that the prince who did not yet protect had no right to punish them.

Six victims had been chosen by O'Reilly to serve as an example to the province; but Villere having been assassinated, he contented himself with condemning five to death. The testimony of two witnesses against each of the accused was necessary to give a color

of legality to their condemnation; and these were easily found. Lafreniere, Noyant, Marquis, Joseph Milhet, and Caresse were sentenced to be hung, and their property confiscated. The unfortunate Louisianians vainly implored of the inexorable O'Reilly a delay that he would enable them to have a recourse to the royal clemency. The only favor he could be prevailed upon to grant was the substitution of shooting for hanging.

On the 28th of September, the day appointed for the execution, all the troops were drawn up under arms on the levee and in the public square; the gates were closed, the posts all reinforced, and a strong patrol paraded through the deserted streets; the inhabitants having all retired to their houses the evening before, that they might not witness the death of their friends. The five victims were led out into the small square in front of the barracks, where they met their fate with the utmost courage and resignation.

It was attempted to blindfold them, when Marquis, a Swiss captain in the service of France, indignantly opposed it. "I have," said he, "risked my life many a time in the service of my adopted country, and have never feared to face my enemies." And then addressing his companions, "Let us," he exclaimed, "die like brave men; we need not fear death." Coolly taking a pinch of snuff and turning to the Spaniards, he said, "Take notice, Spaniards, that we die because we will not cease to be French. As for myself, though a foreigner by birth, my heart belongs to France. For thirty years I have fought for Louis *le bien-aimé*, and I glory in a death that proves my attachment to him. Fire, executioners!"

The other six prisoners, Boisblanc, Doucet, Marent, Jean Milhet, Petit, and Poupet, were sentenced, the first to imprisonment for life, and the others for a term of years. They were sent to Havana, and confined in the dungeons of the Moro Castle.

DUNMORE'S WAR.

THE war usually called Dunmore's, all the events of which were comprised within a few months of the year 1774, arose in consequence of cold-blooded murders committed upon inoffensive Indians by the Virginians, in the region of the upper Ohio. Among those murdered by Cresap and Greathouse, at Captina and Yellow Creek, in the vicinity of Wheeling, was included the whole family of the noble, generous, and unfortunate Logan. He had been the steadfast friend of the whites and the advocate of peace; but upon this, he seized the hatchet and sought revenge. The Shawanee, on the Scioto, was the principal tribe in the war, those north and west being in alliance with it. As soon as these murders were known, their revenge and fury knew no bounds, and all manner of savage barbarities were committed upon the frontier settlements. Their operations were mainly directed against the Virginians, as the

authorities of Pennsylvania had taken the precaution to dispatch messengers to them, stating that these outrages had been committed by Virginians; and that, therefore, the settlers on the frontiers of Pennsylvania were not the proper objects of revenge.

Upon the first outbreak of hostilities, consternation spread throughout the frontiers; some families fled to the mountains, others sought safety in forts and stations.

The Colonial Legislature of Virginia, then in session, promptly made provisions for the emergency. While a larger force was collecting in Eastern Virginia, four hundred volunteers from the Monongahela and Youghiogheny, rendezvoused at Wheeling, in June, under Colonel Angus M'Donald. He invaded the Indian country on the Muskingum, and destroyed the Wappatomica towns on that river, a few miles above the site of Zanesville. This expedition only served to further exasperate the Indians.

By September, Lord Dunmore, the royal governor of Virginia, had collected a force of about three thousand men, destined for the reduction of the Shawanee towns on the Scioto. This force was in two divisions. The southern, comprising about eleven hundred men, under Colonel Andrew Lewis, collected in the Greenbrier country. They were ordered to march down the Great Kanawha to the Ohio, and there to join the northern division, while the latter, under command of Dunmore, in person, was to pass the mountains at Cumberland, strike the Ohio at Wheeling, and descend in boats to the mouth of the Kanawha, the point of junction.

On the 6th of October, Lewis arrived with his division at the mouth of the Kanawha, on the site of the village of Point Pleasant and encamped, awaiting orders. On the 9th, messengers arrived in camp from Dunmore, the commander-in-chief, stating that his lordship had arrived with his division at Wheeling, and had so far changed his plan of operations as to descend only to the mouth of the Hocking, twenty-eight miles above Point Pleasant, from which point he was to march across the country to the Indian towns on the Scioto, where Lewis was ordered to join him. Preparations were immediately made for the transportation of the troops across the Ohio.

The Battle of Point Pleasant.—Early on the succeeding morning, the 10th of October, two soldiers left the camp and proceeded up the Ohio River in quest of deer. When they had progressed about two miles, they unexpectedly came upon a large body of Indians, who, discovering them, fired and killed one, while the other made his escape to the camp with the intelligence. The main part of the army was ordered out, and when they had marched in two lines, under the command of Colonels Charles Lewis and Wm. Fleming, at the distance of a quarter of a mile, they were met and charged by the Indians. At the first onset Lewis fell, and Fleming was wounded, upon which both lines gave way and were retreating, when they were reinforced by Col. Field,

and rallied. The engagement then became general, and was sustained with obstinate fury on both sides. The Indians formed in a line across the point from the Ohio to the Kanawha, and were protected in front by logs and fallen timber. In this situation they maintained the contest with unabated vigor, from sunrise until near sunset, bravely resisting successive charges, which were made with great impetuosity by the Virginians.

The Indians were under the command of that distinguished and consummate chieftain, Cornstalk. His plan of alternate retreat and attack was well conceived, and occasioned the principal loss of the whites. If at any time his warriors were believed to waver, his voice could be heard above the din of arms, exclaiming in his native tongue, "be strong! be strong!" A warrior near him showed trepidation and reluctance to charge, fearing the influence of his pernicious example, he cleft his skull open with his tomahawk.

Gen. Lewis seeing it impossible to dislodge the Indians by the most vigorous attacks, and aware of the great danger that must arise to his army if the contest was not decided before night, detached three companies, who followed up under the bank of the Kanawha under the covert of the weeds and brush beyond the upper end of the Indian line, and from thence gained the rear of the savages, and made an attack. The enemy, suddenly finding themselves encompassed on both sides, and supposing that in their rear was an expected reinforcement under Col. Christian, soon gave way, and about sundown, precipitately crossed the Ohio and made their way to their towns on the Scioto. The victory was dearly bought to the Virginians, two hundred and fifteen being killed and wounded, among whom were many valuable officers. The number of the enemy or their loss was never ascertained. They probably numbered about one thousand warriors, the flower of the Shawanee, Delaware, Mingo, and Wyandot tribes.

This battle was the most bloody ever fought with the Indians within the limits of Virginia. Its sanguinary nature made it long remembered among the borderers, and its history is given in a rude song, which is even heard to the present day, among the mountain cabins of that region:

Let us mind the tenth day of October,
Seventy-four, which caused woe,
The Indian savages they did cover
The pleasant banks of the Ohio.

The battle beginning in the morning,
Throughout the day it lashed sore,
Till the evening shades were returning down
Upon the banks of the Ohio.

Judgment precedes to execution,
Let fame throughout all dangers go,
Our heroes fought with resolution,
Upon the banks of the Ohio.

Seven score lay dead and wounded
Of champions that did face their foe,

By which the heathen were confounded,
Upon the banks of the Ohio.

Colonel Lewis and some noble captains
Did down to death, like Uriah, go;
Alas! their heads wound up in napkins,
Upon the banks of the Ohio.

Kings lamented their mighty fallen
Upon the mountains of Gilboa;
And now we mourn for brave Hugh Allen,
Far from the banks of the Ohio.

O bless the mighty King of Heaven,
For all his wondrous works below,
Who hath to us the victory given,
Upon the banks of the Ohio.

Meanwhile Dunmore had descended the Ohio to the mouth of the Hocking, where he erected Fort Gower. From thence he marched toward the Indian towns on the Scioto, about four miles south of the site of Circleville, and thirty from that of Columbus. Lewis, with his army, pushed forward to the same point, maddened by the loss of so many brave men, and anxious to avenge their fate by the annihilation of the Shawanee villages. But before reaching the Scioto, the Indians, seeing the uselessness of attempting to oppose the army, sent messengers to Dunmore, asking peace. He listened to their request, appointed a place for the conference, and sent orders to Lewis to arrest his march. Lewis refused to obey; nor was it until Dunmore in person visited his camp, on Congo Creek, just south of the Indian towns, that he felt himself bound, though unwillingly, to give up his hostile designs.

Lord Dunmore remained at his camp, called Camp Charlotte, four miles east of the Indian towns, where, matters having been arranged, a council was held with the Indian chiefs to negotiate peace. The deliberations were opened by Cornstalk, in a short and energetic speech, delivered with great dignity, and in a tone so powerful as to be heard all over the camp.

He recited the former power of the Indians, the number of their tribes, compared with their present wretched condition, and their diminished numbers; he referred to the treaty of Fort Stanwix, and the cessions of territory then made by them to the whites; to the lawless encroachments of the whites upon their lands, contrary to all treaty stipulations; to the patient forbearance of the Indians for years, under wrongs exercised toward them by the frontier people. He said the Indians knew their weakness in a contest with the whites, and they *desired only justice*; that the war *was not sought by the Indians, but was forced upon them*; for it was commenced by the whites without previous notice; that, under the circumstances, they would have merited the contempt of the whites for cowardice, if they had failed to retaliate the unprovoked and treacherous murders of Captina and Yellow Creek; that the war was the work of the whites, for the Indians desired peace.

The compact or treaty was at length concluded, and *four* hostages put in possession of Dunmore, to be taken to Virginia. The Indians agreed to make the Ohio their boundary, and the whites stipulated not to pass beyond the west side of that river. Thus was the Ohio, for the first time, *acknowledged by the Indians* as the boundary between the territory of the whites and the hunting-ground of the Indians.

Great excitement, amounting almost to mutiny, prevailed among the troops at not being allowed to fight the Indians. They were highly dissatisfied with the governor and the treaty. The conduct of Dunmore could not be satisfactorily explained by them, except by supposing that he had received orders from the royal government to terminate the war speedily with the hostile tribes, and to make such terms with them as *might secure their alliance in favor*

of England against the colonies, in case the growing difficulties with them should terminate in open war. Such too were said to have been the opinions of General Washington and Chief Justice Marshall.

Map of the Ancient Shawanese Towns on the Pickaway Plains.

[EXPLANATIONS — A. Ancient Works, on which Circleville now stands. B. Logan's Cabin at Old Chillicothe, now Westfall, four miles below Circleville, from this place a trail led through Grenadier Squaw Town, from thence up the Congo Valley, and crossed to the opposite side of the creek, about one and a half miles from its mouth. C. Black Mountain, a short distance west of the old Barr Mansion. D. Council House, a short distance north-east of the residence of Wm. Renick, jr. The two parallel lines at this point represent the gauntlet through which prisoners were forced to run, and O the stake at which they were burnt, which last is on a commanding elevation. F. the camp of Colonel Lewis, just south of the residence of George Wolf. E. the point where Lord Dunmore met with and stopped the army of Lewis, when on their way to attack the Indians; it is opposite the mansion of Major John Boggs. G. the residence of Judge Gills, near which is shown the position of Camp Charlotte.]

Logan, the Mingo chief, still indignant at the murder of his family, refused to attend the council, or to be seen a suppliant among the other chiefs. Yet to General Gibson, who was sent as an envoy to the Shawanese towns, on a private interview, after weeping as if his very heart would burst, he told the pathetic story of his wrongs in the following words:

I appeal to any white man to say, if ever he entered Logan's cabin hungry, and I gave him not meat; if ever he came cold or naked, and I gave him not clothing?

During the course of the last long and bloody war, Logan remained in his tent an advocate of peace. Nay, such was my love for the whites, that those of my own country pointed at me, as they passed by, and said: "Logan is the friend of white men." I had even thought to live with you, but for the injuries of one man. Colonel Cresap, the last spring, in cool blood, and unprovoked, cut off all the relatives of Logan; not sparing even my women and children. There runs not a drop of my blood in the veins of any human creature. This called on me for revenge. I have sought it. I have killed many. I have fully glutted my vengeance. For my country, I rejoice at the beams of peace. Yet, do not harbor the thought that mine is the joy of fear. Logan never felt fear. He will not turn on his heel to save his life. Who is there to mourn for Logan? Not one.

This brief effusion of mingled pride, courage and sorrow elevated the character of the native American throughout the intelligent world; and the place where it was delivered can never be forgotten so long as touching eloquence is admired by men.

The last years of Logan were truly melancholy. He wandered about from tribe to tribe, a solitary and lonely man; dejected and broken-hearted by the loss of his friends and the decay of his tribe, he resorted to the stimulus of strong drink to drown his sorrow. He was at last murdered in Michigan, near Detroit. He was, at the time, sitting with his blanket over his head before a camp-fire, his elbows resting on his knees and his head upon his hands, buried in profound reflection, when an Indian, who had taken some offense, stole behind him and buried his tomahawk in his brains. Thus perished the immortal Logan, the last of his race.

The chief, Cornstalk, whose town is shown on the map, was also a man of true nobility of soul, and a brave warrior. When he returned to the Pickaway towns, after the battle of Point Pleasant, he called a council of the nation to consult what should be done, and upbraided them in not suffering him to make peace, as he desired, on the evening before the battle. "What?" said he, "will you do now? The Big Knife is coming on us, and we shall all be killed. Now you must fight, or we are undone." But no one answering, he said, "then let us kill all our women and children, and go and fight until we die." But no answer was made; when, rising, he struck his tomahawk into a post of the council house, and exclaimed, "I'll go and make peace," to which all the warriors grunted, "ough! ough!" and the runners were instantly dispatched to Dunmore to solicit peace.

In the summer of 1777, he was atrociously murdered at Point Pleasant. As his murderers were approaching, his son, Elinip-sico, trembled violently. His father encouraged him not to be afraid, for that the *Great Man* above had sent him there to be

killed and die with him. As the men advanced to the door, Cornstalk rose up and met them; they fired, and seven or eight bullets went through him. So fell the great warrior, Cornstalk, whose name was bestowed upon him by the consent of the nation, as their great strength and support. Had he lived, it is believed that he would have been friendly with the Americans, as he had come over to visit the garrison at Point Pleasant, to communicate the design of the Indians of uniting with the British. His grave is to be seen at Point Pleasant to the present day.

THE EARLY FRENCH SETTLERS.

PREVIOUS to the year 1760, the French emigrants upon the lakes of the North were principally from Picardy and Normandy, in France. They were mainly at the posts which had been founded for the purpose of extending the dominion and religion of France, and prosecuting the fur trade in the Indian country; from which source the courts of Europe derived their richest and most gorgeous furs. The most marked features of these posts were the fort and the chapel, surrounded with patches of cultivated land, and the wigwams of the Indians. Their population was composed of a commandant, Jesuits, soldiers, traders, half-breeds, and savages, all of whom belonged to a system of machinery in religion and trade.

Beside the commandants, the most prominent individuals at the trading-posts were the French merchants. The old French merchant, at his post, was the head man of the settlement. Careful, frugal, without much enterprise, judgment, or rigid virtue, he was employed in procuring skins from the Indians or traders in exchange for manufactured goods. He kept on good terms with the Indians and frequently fostered a large number of half-breed children, the offspring of his licentiousness.

The "Coureurs des Bois," or rangers of the woods, were either French or half-breeds, a hardy race, accustomed to labor and deprivation, and conversant with the characters and habits of the Indians, from whom they procured their cargoes of furs. They were equally skilled in propelling a canoe, fishing, hunting, trapping, or sending a ball from their rifles "to the right eye" of the buffalo. If of mixed blood they generally spoke the language of their parents, the French and Indian, and knew just enough of their religion to be regardless of both. Employed by the aristocratic French fur companies as voyageurs or guides, their forms were developed to the fullest vigor, by propelling the canoe through the lakes and streams, and by carrying large packs of goods across the portages of the interior by straps suspended from their foreheads or shoulders. These voyageurs knew every rock and island, bay and shoal of the western waters. The ordinary dress of the white portion of the

Canadian French traders was a cloth passed about the middle, a loose shirt, a "molton" or blanket coat, and a red milled or worsted cap. The half-breeds were demi-savage in their dress as well as their character and appearance. They sometimes wore a surtout of coarse blue cloth, reaching down to the midleg, elkskin trowsers, with the seams adorned with fringes, a scarlet woolen sash tied around the waist, in which was stuck a broad knife, to be used in dissecting the carcasses of animals taken in hunting; buckskin moccasins, and a cap made of the same materials with the surtout.

The "Coureurs des Bois," the pilots of the lakes, were the active agents of the fur trade. Sweeping up in their canoes through the upper lakes, encamping with the Indians in the solitude of the forests, they returned to the posts which stood like lighthouses of civilization upon the borders of the wilderness, like sailors from the ocean, to whom they were similar in character. They were lavish of their money in dress and licentiousness. They ate, drank, and played all away, so long as their goods held out, and when these were gone, they sold their embroidery, their laces and clothes, and were then forced to go on another voyage for subsistence.

The gay, licentious, and reckless character of these forest mariners may be inferred from their boat songs, which they timed with their paddles upon the waters. Among the most popular are the two following, which are even now heard upon the northwest lakes.

SONGS OF THE FRENCH VOYAGEURS.

SONG FIRST.

Tout les printemps
Tant de nouvelles ;
Tout les amants
Changent de maitresses.
Jamais le bon vin ne endort ;
L'amour me reveille.

Tout les amants
Changent de maitresses ;
Qu'ils changent qui voudront,
Pour moi je garde la mienne.
Le bon vin ne endort ;
L'amour me reveille.

TRANSLATION.

Every spring
Something new ;
Every lover
Changes his mistress.
Good wine never makes one sleepy ;
Love awakens me.

Every lover
Changes his mistress ;
Let those change who wish,
For my part. I'll keep mine.
Good wine never makes one sleepy ;
Love awakens me.

SONG SECOND.

Dans mon chemin j'ai rencontre
Trois chevaliers bien montes.
Lon, lon, laridon daine,
Lon, lon, laridon dai.

Trois cavaliers bien montes,
L'un a cheval. et l'autre a pied.
Lon, lon, loridon daine,
Lon, lon, laridon dai.

TRANSLATION.

On my way I met
Three horsemen well mounted.
Hey down, derry down, dey,
Hey down, etc.

Three horsemen well mounted ;
One on horse. the other on foot.
Hey down, derry down, dey ;
Hey down, etc.

The peasantry, or that portion of the French population who devoted themselves to agriculture, maintained the habits which were brought from the provinces whence they emigrated ; and

these are retained to the present time. While the gentlemen preserved the garb of the age of Louis XIV, the peasants wore a long surtout, sash, red cap, and deer-skin moccasins. This singular mixture of character was made more strange by the Indians who loitered around the posts, the French soldiers, with blue coats turned up with white facings, and short clothes, and by the number of priests and Jesuits who had their stations around the forts. Agriculture was but little encouraged, either by the policy of the fur trade or the industry of the inhabitants. It was limited to a few patches of corn and wheat, which were cultivated in profound ignorance of the principles of good husbandry. Their grain was ground in windmills. The enterprise of the French women was directed to the making up of coarse cotton and woolen clothes for the Indian trade. Their amusements were confined to dancing to the sound of the violin, in simple and unaffected assemblies at each other's houses; or in attending the festivals of their church, hunting in the forests, or paddling their canoes across the silent streams. The wilderness gave them abundance of game; and the lake herring, the bass, the pike, the gar, the mosquenonge, and sturgeon, swarmed in the waters. The Mackinaw trout, sometimes weighing fifty pounds, pampered their taste; and the white-fish, of which, says Charlevoix, "nothing of the fish kind can excel it," flashed its silver scales in the sun.

The administration of law was such as might properly be expected, where no civil courts were organized and all was elemental. The military arm was the only effective power to command what was right and to prohibit what was wrong. The commandant of the fort, under the cognizance of the governor-general of Canada, was the legislator, the judge, and the executive.

The volatile and migratory disposition natural to the French people, increased by the roving habits of the fur trade, was under the rigid surveillance of the Catholic clergy. The Jesuits and the priests exercised an inquisitorial power over every class of the little commonwealth upon the lakes, and the community became thus subjected thoroughly to their influence, which was artful, though mild and beneficent. The utmost satisfaction was experienced by the French colonists in attending the ordinances of the church, and kneeling upon the floor of the rude chapel before the altar, counting their beads, or making the sign of the cross upon their foreheads with holy water from the baptismal font. The Jesuits and priests, with their long gowns and black bands, were, however, not so successful with the savages. By them the clergy were deemed "medicine men" and jugglers, on whom the destinies of life and death depended. If a silver crucifix, the painting of a Madonna, a carved saint, an ancient book, or the satin vestments of the priests, embroidered with flowers of purple and gold, sometimes came before their eyes, it was believed that they were but implements of incantation, by which the souls of those on earth were to be spirited away to heaven. It was naturally thought that

this was the peculiar province of the missionaries; and there is evidence of an Iroquois warrior, who threatened the life of a Catholic priest who ministered beside the mat of an aged savage on the verge of death, unless he should rescue the dying Indian from the grave.

The fur trade was the principal subject of mercantile traffic upon the coast of Michigan, and its central point was the shores of the northwestern lakes. Large canoes laden with packs of European merchandise, advanced periodically through the upper lakes, for the purpose of trading for peltries with the Indians; and these made their principal depots at Michilimackinac and Detroit. In order to advance the interests of the trade, licenses were granted by the French king, and unlicensed persons were prohibited from trading with the Indians in their own territory under the penalty of death.

The progress of the country under the French government was obstructed by the fact that this region was long under the monopoly of exclusive companies chartered by the French crown. The design of these companies, especially the governors and intendants, was to enrich themselves by the fur trade; and accordingly they had little motive to encourage agriculture or general settlement.

By that policy the intendants accumulated large fortunes by the trade, while they averted from the observation of the French crown the actual condition of the colonies in Canada. They much preferred that the French inhabitants should undergo the labor of procuring furs, while they might reap the profits, rather than that these tenants should become the free husbandmen of a fertile soil. It was reverence for rank, ignorance of the true principles of republican freedom, and in some measure perhaps, a virtuous loyalty which they felt toward their monarch, that induced them to yield their allegiance to the colonial administration.

The early French in the Illinois country, as well as those elsewhere, were remarkable for their talent of ingratiating themselves with the warlike tribes around them, and for their easy amalgamation in manners, and customs, and blood. Unlike most other European emigrants, who commonly preferred to settle in sparse settlements, remote from each other, the French manifested in a high degree, at the same time, habits both social and vagrant. They settled in compact villages, although isolated, in the midst of a wilderness a thousand miles remote from the dense settlements of Canada. On the margin of a prairie, or on the bank of some gentle stream, their villages sprung up in long, narrow streets, with each family homestead so contiguous that the merry and sociable villagers could carry on their voluble conversation, each from his own door or balcony. The young men and voyageurs, proud of their influence among the remote tribes of Indians, delighted in the long and merry voyages, and sought adventures in the distant travels of the fur-trade. After months of absence upon the sources of the longest rivers and tributaries among their savage friends,

they returned to their village with stores of furs and peltries, prepared to narrate their hardy adventures and the thrilling incidents of their perilous voyage. Their return was greeted with smiling faces, and signalized by balls and dances, at which the whole village assembled to see the great travelers, and hear the fertile rehearsal of wonderful adventures and strange sights in remote countries.

Such were the scenes at "Old Kaskaskia," at Cahokia, Prairie du Rocher, and a few other points on the Upper Mississippi, from the year 1720 to the year 1765; and, in later times, at the villages of Fort Chartres, St. Genevieve, St. Louis, and St. Charles, and at St. Vincent on the Wabash, as well as many other points on the Lower Mississippi, at the Post of Natchitoches on Red River, and the Post of Washita on the Washita River; as well as upon the La Fourche, Faussee Riviere, and the coast above New Orleans.

Their settlements were usually in the form of small, compact patriarchal villages, like one great family assembled around their old men and patriarchs. Their houses were simple, plain, and uniform. Each homestead was surrounded by its own separate inclosure of a rude picket fence, adjoining or contiguous to others on the right and left. The houses were generally one story high, surrounded by sheds or galleries; the walls were constructed of a rude framework, having upright corner-posts and studs, connected horizontally by means of numerous cross-ties, not unlike the rounds in a ladder. These served to hold the "cat and clay" with which the interstices were filled, and with which the walls were made, and rudely plastered with the hand.

These abodes of happiness were generally situated on the margin of a beautiful prairie, and beside some clear stream of running water, or on the bank of a river or bayou, near some rich, alluvial bottom, which supplied the grounds for the "common field" and "commons."

The "common field" consisted of a large contiguous inclosure, reserved for the common use of the village, inclosed by one common fence for the benefit of all. In this field, which sometimes consisted of several hundred acres, each villager and head of a family had assigned to him a certain portion of ground, for the use of himself and family, as a field and garden. Near the village and around the common field, was an extensive open scope of lands reserved for "commons," or a common pasture-ground. This consisted of several hundreds, and often of thousands, of acres uninclosed and free for the use of all as a common pasture, as well as for the supply of fuel and timber.

Care was a stranger in the villages, and was rarely entertained many days as a guest. Amusements, festivals, and holydays were frequent and served to dispel dull care, when an unwelcome visitor. In the light fantastic dance, the young and the gay were active participants, while the serene and smiling countenance of the aged patriarch and his companion in years, and even of the

“reverend father,” lent a sanction and a blessing upon the innocent amusement and useful recreation. The amusements past, all could cheerfully unite in offering up to God the simple gratitude of the heart for his unbounded mercies.

Nor were these festive enjoyments confined to any sex or condition. In the dance all participated from the youngest to the oldest, the bond and the free; even the black slave was equally interested in the general enjoyment, and was happy because he saw his master happy; and the master, in turn, was pleased to witness the enjoyment of the slave. The mutual dependence of each upon the other, in their respective spheres, contributed to produce a state of mutual harmony and attachment. It has been almost a proverb, that the world did not exhibit an example of a more contented and happy race than the negro slaves of the early French in the Illinois country.

The common people, in their ordinary deportment, were often characterized by a calm, thoughtful gravity, and the saturnine severity of the Spaniard, rather than the levity characteristic of the French; yet in their amusements and fetes, they exhibited all the gayety of the natives of France. Their saturnine gravity was probably a habit adopted from the Indian tribes with whom they held daily intercourse, and in whose sense of propriety levity of deportment on ordinary occasions is esteemed not only unbecoming, but unmanly. The calm, quiet tenor of their lives, remote from the active bustle of civilized life and business, imparted to their character, to their feelings, to their general manners, and even to their very language, a languid softness which contrasted strongly with the anxious and restless activity of the Anglo-Saxon race, which is fast succeeding to the occupancy of their happy abodes. With them hospitality was hardly esteemed a virtue, because it was a *duty* which all cheerfully performed. Taverns were unknown, and every house supplied the deficiency. The statute-book, the judiciary, and courts of law, with their prisons and instruments of punishment, were unknown; as were also the crimes for which they are erected among the civilized nations of Europe. On politics and the affairs of the nation, they never suffered their minds to feel a moment's anxiety, believing implicitly that France ruled the world, and all must be right. Worldly honors and distinctions were bubbles unworthy of a moment's consideration or a moment's anxiety. Without commerce, they knew not, nor desired to know, the luxuries and the refinements of civilized communities. Thus day after day passed by in contentment and peaceful indolence. The distinction of wealth or rank was almost unknown; all were upon a natural equality, all dressed alike, and all met as equals at their fetes and in their ball-rooms.

The virtues of their primitive simplicity were many. Punctuality and honesty in their dealings, politeness and hospitality to strangers, were habitual; friendship and cordiality toward neigh-

bors was general ; and all seemed as members of one great family connected by the strong ties of consanguinity. Wives were kind and affectionate ; in all respects they were equal to their husbands, and held an influence superior to the females in most civilized countries. They had entire control in all domestic concerns, and were the chief and supreme umpires in all doubtful cases. Did a case of casuistry arise, who so well able to divine the truth, or so well qualified to enforce the decision, as the better half ? Mechanic trades, as a means of livelihood, were almost unknown ; the great business of all was agriculture and the care of their herds and flocks, their cattle, their horses, their sheep, and their swine, and each man was his own mechanic.

The peculiar manners and customs of these French settlements, isolated a thousand miles from any other civilized community, became characteristic and hereditary with their descendants even to the present time. In 1765, when the English dominion was extended over the Illinois country, many of them, rather than submit to the hated dominion of England, emigrated to the west side of the Mississippi, within the present limits of Missouri, which, in 1763, had been ceded to Spain. The French settlements there increased, while those in Illinois began to decline.

THE WESTERN WILDERNESS.

To a person who has witnessed all the changes which have taken place in the western country since its first settlement, its former appearance is like a dream or romance. He will find it difficult to realize the features of that wilderness which was the abode of his infant days. The little cabin of his father no longer exists ; the little field and truck patch which gave him a scanty supply of coarse bread and vegetables, have been swallowed up in the extended meadow, orchard, or grain field. The rude fort, in which his people had resided so many painful summers, has vanished, and "like the baseless fabric of a vision, left not a wreck behind."

Everywhere surrounded by the busy hum of men, and the splendor, arts, refinements and comforts of civilized life, his former state and that of his country have vanished from his memory ; or if sometimes he bestows a reflection on its original aspect, the mind seems to be carried back to a period of time much more remote than it really is. The immense changes which have taken place in the physical and moral state of the country have been gradual and, therefore, scarcely perceived from year to year ; but the view from one extreme to the other is like the prospect of the opposite shore over a vast expanse of water, whose hills, valleys, mountains, and forests present a confused and romantic scenery, which loses itself in the distant horizon.

One advantage at least results from having lived in a state of

society, ever on the change, and always for the better, it doubles the retrospect of life. With me at any rate, it has had that effect. Did not the definite number of my years teach me to the contrary, I should think myself at least one hundred years old instead of fifty. The case is said to be widely different with those who have passed their lives in cities or ancient settlements, where, from year to year, the same unchanging aspect of things presents itself. There life passes away as an illusion or dream, having been presented with no striking events, or great and important changes, to mark its different periods, and give them an imaginary distance from each other, and it ends with a bitter complaint of its shortness.

One prominent feature of a wilderness is its solitude. Those who plunged into the bosom of this forest left behind them not only the busy hum of men, but domesticated animal life generally. The parting rays of the setting sun did not receive the requiem of the feathered songsters of the grove, nor was the blushing aurora ushered in by the shrill clarion of the domestic fowls. The solitude of the night was interrupted only by the howl of the wolf, the melancholy moan of the ill-boding owl, or the shriek of the frightful panther. Even the faithful dog, the only steadfast companion of man among the brute creation, partook of the silence of the desert; the discipline of his master forbade him to bark or move, but in obedience to his command, and his native sagacity soon taught him the propriety of obedience to this severe government.

The day was, if possible, more solitary than the night. The noise of the wild turkey, the croaking of the raven, or "the woodpecker tapping the hollow beech tree," did not much enliven the dreary scene.

The various tribes of singing birds are not inhabitants of the desert; they are not carnivorous, and therefore must be fed from the labors of man. At any rate they did not exist in this country at its first settlement.

Let the imagination of the reader pursue the track of the adventurer into the solitary wilderness. Bending his course toward the setting sun, over undulating hills, under the shade of large forest trees, and wading through the rank weeds and grass which then covered the earth. Now viewing from the top of a hill the winding course of a creek whose stream he wishes to explore. Doubtful of its course and of his own, he ascertains the cardinal points of north and south by the thickness of the moss and bark on the north side of the ancient trees. Now descending into a valley and presaging his approach to a river, by seeing large ash, bass-wood, and sugar trees, beautifully festooned with wild grapevines. Watchful as Argus, his restless eye catches everything around him. In an unknown region, and surrounded with dangers, he is the sentinel of his own safety, and relies on himself for protection. The toilsome march of the day being ended, at the fall of night, he seeks for safety some narrow sequestered hollow, and by the side of a large log, builds a fire, and after eating a coarse and scanty meal,

wraps himself up in his blanket, and lays him down on his bed of leaves, with his feet to the little fire for repose, hoping for favorable dreams, ominous of future good luck, while his faithful dog and gun repose by his side.

But let not the reader suppose that the pilgrim of the wilderness could feast his imagination with the romantic beauties of nature, without any drawback from conflicting passions. His situation did not afford him much time for contemplation. He was an exile from the warm clothing and plentiful mansions of society. His homely woodman's dress soon became old and ragged; the cravings of hunger compelled him to sustain from day to day the fatigues of the chase. Often had he to eat his venison, bear meat, or wild turkey, without bread or salt. Nor was this all; at every step the strong passions of hope and fear were in full exercise. Eager in pursuit of his game, his too much excited imagination sometimes presented him with the phantom of the object of his chase, in a bush, a log, or mossy bank, and occasioned him to waste a load of his ammunition, more precious than gold, on a creature of his own brain, and he repaid himself the expense by making a joke of his mistake. His situation was not without its dangers. He did not know at what tread his foot might be stung by a serpent, at what moment he might meet with the formidable bear, or, if in the evening, he knew not on what limb of a tree over his head the murderous panther might be perched, in a squatting attitude, to drop down upon, and tear him to pieces in a moment. When watching a deer lick from his blind at night, the formidable panther was often his rival in the same business, and if by his growl or otherwise the man discovered the presence of his rival, the lord of the world always retired as speedily and secretly as possible, leaving him the undisturbed possession of the chance of game for the night.

The wilderness was a region of superstition. The adventurous hunter sought for ominous presages of his future good or bad luck, in everything around him. Much of his success depended on the state of the weather; snow and rain were favorable, because in the former he could track his game, and the latter prevented them from hearing the rustling of leaves beneath his feet. The appearance of the sky morning and evening gave him the signs of the times, with regard to the weather. So far he was a philosopher. Perhaps he was aided in his prognostics on the subject by some old rheumatic pain, which he called his "weather clock." Say what you please about this, doctors, the first settlers in this county were seldom mistaken in this latter indication of the weather. The croaking of a raven, the howling of a dog, and the screech of an owl were as prophetic of future misfortunes among the first adventurers into this country, as they were among the ancient pagans; but above all, their dreams were regarded as ominous of good or ill success. Often when a boy, I heard them relate their dreams, and the events which fulfilled their indications. With some of the

woodsmen there were two girls of their acquaintance, who were regarded as the goddesses of their good or bad luck. If they dreamed of the one, they were sure of good fortune; if of the other, they were equally sure of bad. How much love or aversion might have had to do in this case, I cannot say, but such was the fact.

The passion of fear excited by danger, the parent of superstition, operated powerfully on the first adventurers into this country. Exiled from society and the comforts of life, their situation was perilous in the extreme. The bite of a serpent, a broken limb, a wound of any kind, or a fit of sickness in the wilderness, without those accommodations which wounds and sickness require, was a dreadful calamity. The bed of sickness, without medical aid, and above all, to be destitute of the kind attention of a mother, sister, wife, or other female friends, those ministering angels in the wants and afflictions of a man, was a situation which could not be anticipated by the tenant of the forest, with other sentiments than those of the deepest horror.

Many circumstances concurred to awaken, in the mind of the early adventurer into this country, the most serious and even melancholy reflections. He saw everywhere around him indubitable evidences of the former existence of a large population of barbarians, which had long ago perished from the earth. Their arrow-heads furnished them with gun-flints; stone hatchets, pipes, and fragments of earthenware, were found in every place. The remains of their rude fortifications were met with in many places, and some of them of considerable extent and magnitude. Seated on the summit of some sepulchral mound, containing the ashes of tens of thousands of the dead, he said to himself: "This is the grave, and this, no doubt, the temple of worship, of a long succession of generations, long since mouldered into dust; these surrounding valleys were once animated by their labors, hunting and wars, their songs and dances; but oblivion has drawn her impenetrable veil over their whole history; no lettered page, no sculptured monument informs who they were, from whence they came, the period of their existence, or by what dreadful catastrophe the iron hand of death has given them so complete an overthrow, and made the whole of this country an immense Golgotha."

Such, reader, was the aspect of this country at its first discovery, and such the poor and hazardous lot of the first adventurers into the bosoms of its forests. How widely different is the aspect of things now, and how changed, for the better, the condition of its inhabitants! If such important changes have taken place in so few years, and with such slender means, what immense improvements may we not reasonably anticipate for the future.

INCIDENTS OF THE REVOLUTION IN THE WEST.

THE war of the Revolution was peculiarly severe to the scattered settlements of the West, and it is surprising that its hardy population were enabled to sustain themselves against the numerous hordes of savages that, strengthened by the aid of Britain, assailed them on all quarters.

Invasion of the Cherokee Country.—Beside the Indian nations of the North, the Cherokees, instigated by British agents, once more took up the hatchet, and broke up the settlements on the frontiers of the Carolinas, and in Southwestern Virginia, in the region of Abington. In the fall of 1776, their country was invaded by three separate divisions, respectively from South Carolina, North Carolina, and Virginia. These expeditions were successful; their fields were destroyed; their towns given to the flames; and they were compelled to sue for peace. At this time, the Virginia division, under Colonel Christian, erected Fort Henry in the heart of the Cherokee nation, on the south fork of the Holston, about one hundred and fifty miles above the mouth of French Broad.

In the spring of 1777, the Shawanese, having combined with the other tribes of the North, commenced an invasion of the infant settlements of the West, and before the close of summer, had made furious but unsuccessful attempts upon the Kentucky posts of Harrod's Station, Logan's Fort, and Boonesborough.

During the summer, the settlements in Northwestern Virginia, upon the Monongahela and Ohio Rivers, were harassed by scalp-ing parties, who committed many murders.

Siege of Fort Henry.—In September, 1777, Fort Henry, at Wheeling, originally called Fort Fincastle, was besieged by about four hundred Indians, led on by a notorious renegade, Simon Girty. The fort was a parallelogram, with a block-house at each of the four corners, connected by lines of pickets, and inclosing about three-quarters of an acre. The principal gate was on the east side of the fort, next to the few straggling log-huts, comprising the then village of Wheeling. The garrison numbered only forty-two fighting men, including old men and boys, and they were sadly deficient in ammunition.

On the 27th inst., the settlers in the vicinity became alarmed, and sought shelter, with their families, within the fort. The next morning a man, sent out by Colonel Shepherd, the commandant, on an errand, was killed, and a negro with him escaped back to the fort, with the intelligence that they had been waylaid by a party of Indians in a cornfield. Upon this, Captain Mason, with fourteen men, went out to dislodge the Indians, when they were attacked on all sides by the whole of Girty's force. They made a desperate resistance; but overwhelmed by numbers, all but two, beside the captain, were slain. Captain Ogle, with twelve others, sallying out to cover their retreat, was also attacked, and defeated

with like slaughter. The enemy then advanced toward the fort in two extended lines, making the air resound with the warhoop.

This salute was answered by a few rifle-shots from the lower block-houses. The garrison was now reduced to twelve men and boys; but they were undismayed by their losses, or the overwhelming force opposed to them; and on that day performed prodigies of valor. Girty, having disposed of his force in the deserted houses, and under cover of fences, appeared with a white flag at the window of a cabin. He read the proclamation of Governor Hamilton, of Detroit, and promised them protection if they would lay down their arms, and swear allegiance to his Britannic Majesty. He warned them to submit peacefully, and told them that he could not restrain the savages if the fort fell by assault. Colonel Shepherd replied that he could only obtain possession of the fort when there remained no longer an American soldier to defend it. Girty renewed his proposition, but a youth put an end to the conference by firing a gun at him, and the siege again opened.

It was yet early in the morning of a day of surpassing beauty. The Indians, for the space of six hours, kept up a brisk fire, but very much at random, and with little or no effect. The little garrison was composed of sharp-shooters, and fired with great coolness and precision. Occasionally the most reckless of the savages would rush up close to the block-houses to fire through the logs, but shots from the well-directed rifles drove them back. About one o'clock the Indians discontinued their fire, and fell back to the base of the hill.

The stock of gunpowder in the fort being exhausted, it was determined to seize this opportunity to send for a keg, in a house, distant about sixty yards from the fort. The colonel being unwilling to order any one upon such a desperate errand, asked for a volunteer. Several young men promptly stepped forward. The colonel informed them that, in the weak state of the garrison, only one man could be spared, and that they must decide who that should be. The eagerness of each to go prevented them from deciding, and so much time was consumed in the contention that fears began to arise that the Indians would renew the attack before the powder could be procured. At this crisis a young lady, Miss Elizabeth Zane, came forward and, to the astonishment of all, expressed a desire that she might be permitted to go. This proposition seemed so extravagant that it met with a peremptory refusal; but no remonstrances of her friends or the colonel could dissuade her from her heroic purpose. She stated that the great danger was the very reason that she should go; that the loss of her life would be unfelt, while that of a soldier, in the weak state of the garrison, would be of serious injury. Her petition was ultimately granted, and as she went out of the gate, the Indians in the vicinity looked at her with astonishment; but for some incomprehensible reason did not molest her. When she re-appeared with the powder, the

Indians suspected her errand and discharged a volley at her, as she swiftly glided toward the gate and entered it, amid a shower of balls, unharmed with her prize. It was a noble exploit, one rarely equaled in self-devotion and moral intrepidity.

After an intermission of about two hours, the Indians renewed the attack with great energy. Toward evening, the rifles of the garrison had become so much heated by continued firing that they were obliged to have recourse to a supply of muskets. After dark, the Indians brought up a hollow maple log, which they had converted into a fieldpiece. They bound it round with iron chains to give it additional strength, and loaded it to the muzzle with slugs of iron, and then pointed it against the main gate. Upon being discharged, its contents did no harm to the garrison, but as it burst into many fragments a number of Indians were killed and wounded. A loud yell announced their disappointment, and the crowd gathered around dispersed.

About four o'clock next morning, Col. Swearingen succeeded in entering the fort with fourteen men from Cross Creek, and shortly after, forty mounted men from Short Creek, under Major McCulloch, though closely beset by the Indians, made their way into the gate which opened to receive them. But McCulloch, like a brave officer, was the last man, and he was cut off from his men, and nearly surrounded by the Indians. He wheeled and galloped toward a lofty hill in the rear of the fort, beset the whole way by Indians, who might have killed him, but knowing him as one of the bravest and most successful of Indian fighters on the frontier, wished to take him alive and gratify their full revenge by subjecting him to the severest tortures. He intended to ride along the ridge, and thus make his way to Short Creek; but on gaining the top, he found himself headed by a hundred savages, while the main body was in keen pursuit in his rear. He was hemmed in all sides but the east, where the precipice was almost perpendicular and the bed of the creek lay like a gulf, near two hundred feet below him. This, too, would have been protected by the cautious enemy, but the jutting crags forbade his climbing or even descending it on foot, and to attempt it on horseback seemed inevitable death to both rider and steed. But with McCulloch it was but a chance of death and a narrow chance of life. He chose like a brave man. Setting himself back in his saddle and his feet firmly braced in the stirrups, with his rifle in his left hand and the reins adjusted in his right, he cast one look upon the approaching savages, pushed his spurs into his horse's flanks, and made the decisive leap. In a few moments the Indians saw their mortal foe, whose daring act they beheld with astonishment, emerging from the valley below still safely seated on his noble steed, and shouting defiance to his pursuers.

After the escape of McCulloch the Indians set fire to the cabins and fences outside the fort, and then raised the siege. The defense had been admirably conducted by the garrison in the face of an

enemy thirty times their numbers. In the hottest of the fight even the females showed great intrepidity, employing themselves in running bullets, preparing rifle-patches, and infusing new life into the soldiers by words of encouragement. Inside of the fort not a man was killed, and only one wounded, while the loss of the enemy was from sixty to one hundred.

Just previous to the siege of Fort Henry, a party of forty-five men, under Captain Foreman, fell into an ambushade on the banks of the Ohio, eight miles below the fort. Twenty-one, including their commander and his two sons, were slain, and several of the others wounded. A simple monument marks the spot of this fatal tragedy.

Conquest of Illinois.—British authority was extended over the Illinois country shortly after the peace of 1753. The commandant was always some officer of his majesty's army, who generally exercised despotic authority over the people. The population was composed entirely of a few thousand French, who dwelt isolated in their settlements in the depths of a vast wilderness. Their principal settlements were Kaskaskia, Vincennes, and Cahokia, at each of which forts were erected and garrisoned by British troops. These posts, and that of Detroit, were the points where were planned the hostile incursions of savages that desolated the frontiers of Pennsylvania, Virginia, and the new settlements of Kentucky. The whole of the Illinois country being at that time within the chartered limits of Virginia, Col. George Rogers Clarke, an officer of extraordinary genius, who had recently emigrated to Kentucky, with slight aid from the mother State projected and carried out a secret expedition for the reduction of these posts, the great fountains of Indian massacre.

About the middle of June (1778), Clarke by extraordinary exertions assembled at the falls of the Ohio six incomplete companies. From these he selected about one hundred and fifty men, and descended the Ohio in keelboats *en route* for Kaskaskia; on their way down they learned, by a messenger, of the alliance of France with the United States. About forty miles from the mouth of the Ohio, having first concealed their boats by sinking them in the river, they commenced their march toward Kaskaskia. Their route was through a pathless wilderness interspersed with morasses, and almost impassable to any except backwoodsmen. After several days of great fatigue and hardships, they arrived unperceived, in the evening of the 4th of July, in the vicinity of the town. In the dead of night Clarke divided his little force into two divisions. One division took possession of the town while the inhabitants were asleep; with the other Clarke in person crossed to the opposite side of the Kaskaskia river and secured possession of Fort Gage. So little apprehensive was he of danger that the commandant, Rocheblave, had not even posted a solitary sentinel, and that officer was awakened by the side of his wife to find himself a prisoner of war.

The town containing about two hundred and fifty dwellings, was completely surrounded and all avenues of escape carefully guarded. The British had cunningly impressed the French with a horror of Virginians, representing them as blood-thirsty and cruel in the extreme. Clarke took measures for ultimate good, to increase this feeling. During the night the troops filled the air with warhoops; every house was entered and the inhabitants disarmed; all intercourse between them was prohibited; the people were ordered not to appear in the streets under the penalty of instant death. The whole town was filled with terror, and the minds of the poor Frenchmen were agitated by the most horrid apprehensions. At last when hope had nearly vanished, a deputation, headed by Father Gibault, the village priest, obtained permission to wait upon Colonel Clarke. Surprised as they had been by the sudden capture of their town, and by such an enemy as their imagination had painted, they were still more so when admitted to his presence. Their clothes were dirty and torn by the briers, and their whole aspect frightful and savage. The priest, in a trembling, subdued voice, said to Clarke:

“That the inhabitants expected to be separated, never to meet again on earth, and they begged for permission, through him to assemble once more in the church, to take a final leave of each other.” Clarke, aware that they suspected him of hostility to their religion, carelessly told them, that he had nothing to say against their church; that religion was a matter which the Americans left every one for himself to settle with his God; that the people might assemble in the church if they wished, but they must not leave the town. Some further conversation was attempted; but Clarke, in order that the alarm might be raised to its utmost height, repelled it with sternness, and told them at once that he had not leisure for further intercourse. The whole town immediately assembled at the church; the old and the young, the women and the children, and the houses were all deserted. The people remained in church for a long time—after which the priest, accompanied by several gentlemen, waited upon Colonel Clarke, and expressed in the name of the village, “their thanks for the indulgence they had received.” The deputation then desired, at the request of the inhabitants, to address their conqueror on a subject which was dearer to them than any other. “They were sensible,” they said, “that their present situation was the fate of war; and they could submit to the loss of property, but solicited that they might not be separated from their wives and children, and that some clothes and provisions might be allowed for their future support.” They assured Colonel Clarke, that their conduct had been influenced by the British commandants, whom they supposed they were bound to obey—that they were not certain that they understood the nature of the contest between Great Britain and the colonies—that their remote situation was unfavorable to accurate information—that some of their number had expressed themselves in favor of the Americans,

and others would have done so had they durst. Clarke, having wound up their terror to the highest pitch, resolved now to try the effect of that lenity, which he had all along intended to grant. He therefore abruptly addressed them: "Do you," said he, "mistake us for savages? I am almost certain you do from your language. Do you think that Americans intend to strip women and children, or take the bread out of their mouths? My countrymen disdain to make war upon helpless innocence. It was to prevent the horrors of Indian butchery upon our own wives and children, that we have taken up arms and penetrated into this stronghold of British and Indian barbarity, and not the despicable prospect of plunder. That since the king of France had united his arms with those of America, the war, in all probability, would shortly cease. That the inhabitants of Kaskaskia, however, were at liberty to take which side they pleased, without danger to themselves, their property, or their families. That all religions were regarded by the Americans with equal respect; and that insult offered to theirs, would be immediately punished. And now," continued he, "to prove my sincerity, you will please inform your fellow-citizens, that they are at liberty to go wherever they please, without any apprehension. That he was now convinced they had been misinformed, and prejudiced against the Americans by British officers, and that their friends in confinement should be instantly released." The joy of the villagers, on hearing the speech of Colonel Clarke, may be imagined. The contrast of feeling among the people, on learning these generous and magnanimous intentions of Colonel Clarke, verified his anticipations. The gloom which had overspread the town was immediately dispersed. The bells rung a merry peal; the church was at once filled, and thanks offered up to God for deliverance from the terrors they had feared. Freedom to come and go as they pleased, was immediately given, knowing that their reports would advance the success and glory of his arms.

So great an effect had this leniency of Clarke upon them, that on the evening of the same day, a detachment under Captain Bowman, was dispatched to surprise Cahokia; the Kaskaskians offered to go with it, and secure the submission of their neighbors. This having been accomplished, the two chief posts in Illinois had passed without bloodshed, from the possession of England into that of Virginia.

But St. Vincennes, upon the Wabash, the most important post in the West, except Detroit, still remained in possession of the enemy. Clarke thereupon accepted the offer of Father Gibault, who, in company with another Kaskaskian, proceeded on a mission of peace to St. Vincennes, and by the 1st of August, returned with the intelligence that the inhabitants of that post had taken the oath of allegiance to the American cause.

Clarke next established courts, garrisoned three conquered towns, commenced a fort which proved the foundation of the flourishing

TRACHEMENT OF PONTIAC DISCOVERED.

"When he was upon the point of presenting the belt to Major Gladwyn, and all was breathless expectation, the drums at the door of the council-house suddenly rolled the charge—the guards leveled their pieces and the officers drew their swords from their scabbards."

city of Louisville, and sent the ill-natured Rocheblave a prisoner to Virginia. In October, Virginia extended her jurisdiction over the settlements of the Upper Mississippi and the Wabash, by the organization of the county of Illinois, the largest county at that time in the world. Had it not been for the conquest of the Illinois country by Clarke, it would have remained in the possession of England at the close of the revolution, and continued, like Canada, to the present day, an English province.

Toward the latter part of September, Clarke commenced negotiating with the Indian tribes of the Illinois and Upper Mississippi. No man ever better understood Indian character; he had seen much service in Indian wars, and believed it the best policy to maintain toward them a stern and dignified reserve—and not to invite them to peace, but to fight them fiercely until they were compelled to sue for it. His stern, decided manner, while conducting his negotiations, impressed them with a terror before unknown. His sleepless vigilance, the celerity of his movements, and his lofty courage struck such a panic into the hearts of the northwestern Indians, as not only occasioned for a time a cessation of Indian hostilities on the frontier, but induced some of the tribes to offer their services against the English, which Clarke, from motives of humanity, rejected.

The following anecdote is illustrative of Clarke's manner in his interviews with the Indians. While in camp at Cahokia, the Meadow Indians had been offered a large reward in case they should murder Clarke. Accordingly, they resorted to a stratagem to assassinate him when asleep. Luckily they were frustrated in their designs, and their chiefs imprisoned and sent to the guard-house.

They were put in irons and brought the next day into the council, without being suffered to speak until all the other business was transacted. Colonel Clarke then ordered their irons to be taken off, and told them "that they ought to die for their treacherous attempt upon his life; that he had determined to put them to death, and they must be sensible they had forfeited their lives; but reflecting on the meanness of watching a bear, and catching him asleep, he had concluded that they were not warriors but old women, and too mean, therefore, to be killed by the Big Knife—but as they had put on breech-clothes, pretending to be men when they were women, he should order their breech-clothes to be taken off; and as women know nothing about hunting, a plenty of provisions should be given them for their journey home, and during their stay they should be treated in every respect *like squaws*." He then turned, and renewed a conversation with his friends in attendance.

This treatment appeared to agitate the offending Indians exceedingly. One of their chiefs soon afterward arose and offered a pipe and belt of peace to Clarke, and made a speech. Clarke, however, would not allow it even to be interpreted; and a sword lying

on the table, he took it up and broke the pipe, declaring, at the same time, that Big Knife never treated with women. Several chiefs belonging to the other tribes in attendance, immediately rose to intercede in their behalf, and desired Colonel Clarke to pity their families. Clarke, however, alive to the vulnerable features of the Indian character, told them "that the Big Knife had never made war upon the Indians, and that when Americans came across such people in the woods, they commonly shot them as they did wolves to prevent their eating the deer." This mediation having failed, a consultation took place among themselves, and two of their young men, advancing into the middle of the floor, sat down and flung their blankets over their heads, to the astonishment of the whole assembly. Two of their most venerable chiefs then arose, and with a pipe of peace, stood by these self-devoted victims, and offered their lives as an atonement for the conduct of their tribe. "This sacrifice," said they, "we hope will appease the Big Knife;" and they again offered the pipe.

This affecting and romantic incident embarrassed even the ready mind of Clarke. The assembly was silent. Anxiety to know the fate of the victims was depicted on every countenance. Such magnanimity—such self-devotion as these rude children of the forest exhibited, Colonel Clarke had never witnessed before; and, as he says in his journal, from which the above is extracted, "he never felt so powerful a gust of emotion in his life." Retaining, however, his self-possession as well as he could, he ordered them to rise and uncover themselves, and said "he rejoiced to find that there were men in all nations; that such alone were fit to be chiefs, and with such he liked to treat; that through them he granted peace to their tribes;" and taking them by the hand, he introduced them to the American officers as well as to the French and Spanish gentlemen who were present, and afterward to the other Indian chiefs. They were saluted by all as chiefs of the tribe. A council was immediately held with great ceremony; peace was at once restored; presents were distributed, and neither party had occasion to repent of their doings. Clarke was afterward informed that these young men were held in high estimation among their people; that the incident above related was much talked of among the natives.

Early in the winter the whole regular force at Kaskaskia and Cahokia had been reduced to less than one hundred men, while that at Vincennes, under Captain Helm, comprised but a few individuals.

Hamilton, the British governor at Detroit, mortified at the loss of Illinois, determined to retrieve these disasters to the British cause by re-conquering it from the Virginians. About the middle of December he suddenly appeared before Fort St. Vincent with a formidable body of regulars, militia, and Indians, amounting in all to about seven hundred men. As he advanced to carry the fort by assault, Captain Helm, with a confident air, as if supported by

an ample force, sprang upon a bastion beside a cannon, and waving a lighted match in the air, called out, "Halt! or I'll blow you to atoms!" Ignorant of the numbers of the defenders Hamilton was surprised, and fearing a desperate resistance, ordered a halt. A parley ensued, and to the demand for the surrender of the fort, Helm exclaimed, with an oath, "No man enters here until I know the terms; I will surrender only with the *full honors of war*; otherwise I will resist so long as a man lives to shoulder a rifle." His terms were granted, when lo! the whole garrison, comprising only one private, with the dauntless commander, marched out and laid down their arms.

The winter now setting in, with rain and snow, Colonel Hamilton was obliged to defer further operations until spring. He then made arrangements to enlist for the coming campaign all the southern and western Indians, and there is reason to believe that in that case he would not only have succeeded in sweeping the West from the Mississippi to the mountains, but perhaps have changed the whole tide of the revolution.

Clarke soon put an end to these projects. No sooner did he learn of Helm's surrender than he promptly took measures to anticipate his rival and regain Vincennes; in seven days thereafter, he started with a force of one hundred and thirty men, on a dreary march of one hundred and fifty miles northeasterly, toward Vincennes. At the same time he dispatched an armed galley with forty-six men, under Captain Rodgers, to penetrate and take up a position on the Wabash, near the mouth of White River, and wait orders. The route of Clarke was an Indian trace through forests and prairies. The weather being uncommonly rainy, all the large streams were over their banks. For near one hundred miles these hardy woodsmen, weighed down with their arms and provisions, pressed along on foot through forests, marshes, ponds, broad rivers, and overflown lowlands, until they reached the crossings of the little Wabash, nine miles from Vincennes, where the bottoms were overflowed for the width of three miles, to a depth of from two to near five feet. There the troops sprang into the water, which, in some places, came up to their armpits, and commenced wading across.

A favorite song was sung, and the whole detachment joined in the chorus. When they had got to the deepest part, from whence it was intended to transport the troops in two canoes which they had obtained, one of the men said he felt a path quite perceptible to the touch of naked feet; and supposing it must pass over the highest ground, the march was continued to a place called the Sugar Camp, where they found about half an acre of land above the water. Here they rested a moment. Another expanse of water was now to be crossed, and what heightened the difficulty was the entire absence of wood or timber to support the famishing and exhausted party in wading. The object, however, of their toils was now in sight. Clarke thereupon addressed his troops in a spirited

manner, and led the way into the water as before up to his middle; as soon as the third man had stepped off, Clarke ordered Captain Bowman to fall back with twenty-five men, and shoot every man who refused to march; resolved, as he said, that "no coward should disgrace this company of brave men." The order was received with a shout and huzza, and every man followed his commander, cheered as they sometimes were by the advance guard with a purposed deception that the water was growing shallower, and sometimes with the favorite cry of seamen, "land! land!" When they reached the woods that skirted the river, the water was still up to their shoulders; the support of the trees and floating logs was found of essential use, and aided them in their perilous march. On approaching the bank or high ground, so completely were they exhausted that many fell on their faces, leaving their bodies half in the water, unable any longer to continue their efforts.

They here found an Indian canoe with a small amount of provisions, which proved of inestimable value to the men in their exhausted condition—for such had been their hardships and sufferings from hunger and exposure to water, that the comparative mildness of the winter alone saved them from perishing.

On the evening of the 23d of February, 1779, the attack was made—the sharp crack of the rifle being the first intimation Hamilton had of the presence of an enemy. The riflemen, securely sheltered in a ditch, poured in continuous volleys of balls into the port-holes of the fort, and with such unerring aim that every gunner who presented himself was immediately killed, and the garrison, panic stricken, abandoned the guns. The next day Hamilton surrendered the fort, with valuable military stores, and its garrison of seventy-nine men. Hamilton and his principal officers were sent prisoners to Virginia. The Executive Council consigned him and his associates to imprisonment in irons.

This treatment of the British governor was perfectly proper. While in command at Detroit he was notorious for his cruelty toward prisoners, and as further inducements to the Indians to murder their captives, he gave standing rewards for *scalps*, but offered *none for prisoners*. Hence the Indians were accustomed to compel their captives to carry their baggage into the vicinity of Detroit; there they put them to death, and as they entered the fort with the scalps of their murdered victims, were welcomed by Hamilton with discharges of cannon. He also gave orders to the volunteer scalp-ing parties of whites and Indians to *spare neither men, women, nor children*.

At Vincennes, Col. Clarke planned a campaign for the capture of Detroit, but its great distance and want of sufficient means compelled him to abandon the enterprise. Beside, the taking of Hamilton and his principal officers at Vincennes accomplished the main benefits that would, in other circumstances, have arisen from its capture.

While these events were transpiring in the Illinois country, the

Cherokees, under their chief, Dragging Canoe, instigated by the agents of Hamilton, committed depredations upon the frontiers from Pennsylvania to Georgia. In April, 1779, about 2,000 men, under Col. Evan Shelby and Col. John Montgomery, rendezvoused near the site of Rogersville, Tennessee, invaded the country of the hostile Indians, and destroyed eleven of their towns. This event for some time gave peace to Tennessee, and opened a communication with the settlements in Kentucky.

During the greater part of the year, 1778, the border settlements on the Monongahela and the upper Ohio, suffered but little from Indian incursions. In Kentucky their principal object appeared to be the reduction of the fort at Boonesborough.

Siege of Boonesborough.—On the 7th of February, while at the Lower Blue Licks, on Licking River, making salt for the settlements, Capt. Daniel Boone and twenty-seven men were surprised by a party of over one hundred Indians. They were well treated by the Indians, and carried to their towns on the Miami. At old Chillicothe, near the site of Xenia, Ohio, Boone was adopted as a son by a principal chief. About the middle of June, Boone was agonized by the assembling at old Chillicothe of 450 warriors, armed, painted, and equipped in the most frightful manner, for an expedition against Boonesborough. His captivity now gave him pleasure, as it would be the means of his saving his friends from destruction. Before sunrise the next morning he departed, as if for a hunt, and rapidly making his way toward Boonesborough, arrived there four days after, a distance of one hundred and sixty miles, during which he had but a single meal. His escape occasioned the Indians to delay their expedition for several weeks. About the first of August, with nineteen men, Boone proceeded on an expedition to surprise Paint Creek town, on the Scioto, which they found deserted. Near it they encountered and had a skirmish with a party of about thirty Indians on their march toward Boonesborough; and, on the 7th, discovered the trail of the main Indian army, under Captain Duquesne, within a day's march of their destination.

On the 8th the enemy appeared in great force. There were nearly five hundred Indian warriors, armed and painted in the usual manner, and what was still more formidable, they were conducted by Canadian officers, well skilled in the usages of modern warfare. As soon as they were arrayed in front of the fort the British colors were displayed, and an officer with a flag was sent to demand the surrender of the fort, with a promise of quarter and good treatment in case of compliance, and threatening "*the hatchet*," in case of a storm. Boone requested two days for consideration, which, in defiance of all experience and common sense, was granted. This interval, as usual, was employed in preparation for an obstinate resistance. The cattle were brought into the fort, the horses secured, and all things made ready against the commencement of hostilities.

Boone then appeared at the gate of the fortress, and communicated to Captain Duquesne the resolution of his men to defend the fort to the last extremity. Disappointment and chagrin were strongly painted upon the face of the Canadian at his answer; but endeavoring to disguise his feelings, he declared that Governor Hamilton had ordered him not to injure the men if it could be avoided, and that if nine of the principal inhabitants of the fort would come out and treat with them, they would instantly depart without farther hostility.

The word "*treat*," sounded so pleasantly in the ears of the besieged, that they agreed at once to the proposal, and Boone himself, attended by eight of his men, went out and mingled with the savages, who crowded around them in great numbers and with countenances of deep anxiety. The treaty then commenced and was soon concluded; upon which Duquesne informed Boone that it was a custom with the Indians, upon the conclusion of a treaty with the whites, for two warriors to take hold of the hand of each white man.

Boone thought this rather a singular custom, but there was no time to dispute about etiquette, particularly as he could not be more in their power than he already was; so he signified his willingness to conform to the Indian mode of cementing friendship. Instantly, two warriors approached each white man with the word "brother" upon their lips, but a very different expression in their eyes, and grappling him with violence attempted to bear him off. They probably (unless totally infatuated) expected such a consummation, and all at the same moment sprang from their enemies and ran to the fort, under a heavy fire which fortunately only wounded one man.

The attack instantly commenced by a heavy fire against the picketing, and was returned with fatal accuracy by the garrison. The Indians quickly sheltered themselves, and the action became more cautious and deliberate. Finding but little effect from the fire of his men, Duquesne next resorted to a more formidable mode of attack. The fort stood on the south bank of the river, within sixty yards of the water. Commencing under the bank, where their operations were concealed from the garrison, they attempted to push a mine into the fort. Their object, however, was fortunately discovered by the quantity of fresh earth which they were compelled to throw into the river, and by which the water became muddy for some distance below. Boone, who had regained his usual sagacity, instantly cut a trench within the fort in such a manner as to intersect the line of their approach, and thus frustrated their design.

The enemy exhausted all the ordinary artifices of Indian warfare, but were steadily repulsed in every effort. Finding their numbers daily thinned by the deliberate but fatal fire of the garrison, and seeing no prospect of final success, they broke up on the ninth day of the siege, and returned home. The loss of the garrison was two men killed and four wounded. On the part of the

savages, thirty-seven were killed and many wounded, who, as usual, were all carried off.

Late in the fall succeeding, Gen. M'Intosh marched from the vicinity of Pittsburgh, with one thousand men, on an expedition against the Sandusky towns; winter setting in, he relinquished his main design, and erected Fort Laurens, on the site of Bolivar, Ohio. Having garrisoned this fort with one hundred and fifty men, under Col. John Gibson, he returned. Early in the succeeding year, 1779, Fort Laurens sustained a harassing siege of several week's duration, the savages numbering over eight hundred warriors.

In the ensuing summer the Indians kept the settlements of Kentucky in a continual alarm by their small scalping-parties, which penetrated the country in every direction. To protect the settlements, Col. Bowman, in July, with a body of one hundred and sixty mounted Kentuckians, proceeded on an unsuccessful expedition against old Chilicothe.

Rodgers' Defeat.—The most unfortunate event of the year was Rodgers' defeat and massacre at the mouth of the Licking, opposite the site of Cincinnati. Col. David Rodgers and Capt. Benham, with one hundred men, were in two large keel boats, on their way from New Orleans, with supplies of ammunition and provisions for the western posts. In October, when near the mouth of the Licking, a few Indians were seen, and supposing himself to be superior in numbers, Rodgers landed to attack them, and was led into an ambuscade of 400 Indians. The whites fought with desperation, but in a furious onset with tomahawk and scalping-knife, the commander, with about ninety of his men, were soon dispatched. The escape of Capt. Benham was almost miraculous. A shot passed through both legs, shattering the bones. With great pain he dragged himself into the top of a fallen tree, where he lay concealed from the search of the Indians after the battle was over. He remained there until the evening of the next day, when being in danger of famishing, he shot a raccoon which he perceived descending a tree near where he lay. Just at that moment he heard a human cry, apparently within a few rods. Supposing it to be an enemy, he loaded his gun and remained silent. A second, and then a third halloo was given, accompanied by the exclamation, "Whoever you are, for God's sake answer me?" This time Benham replied, and soon found the unknown to be a fellow-soldier, with both arms broken? Thus each was enabled to supply the deficiency of the other. Benham could load, and shoot game, while his companion could kick it to Benham to cook. In this way they supported themselves for several weeks, until their wounds healed sufficiently to enable them to move down to the mouth of the Licking river, where they remained until the 27th of November, when a flatboat appeared moving by on the river. They hailed the boat, but the crew fearing it to be an Indian decoy, at first refused to come to their aid, but eventually were

prevailed upon to take them on board. Both of them recovered. Benham served through the Indian wars down to the victory of Wayne, and subsequently resided near Lebanon, Ohio, until his death, about the year 1808.

The success of Col. Clarke in conquering the Illinois country, together with the capture of the British governor, Hamilton, the great instigator of Indian invasion in the spring of 1779, revived the spirit of emigration to the West. This rapid increase of population so exhausted the supplies of food in the country, as in the succeeding winter (1779-'80) to produce great distress and alarm.

Byrd's Invasion of Kentucky.—In the spring of 1780, the British commandant at Detroit prepared for the reduction of Ruddle's and Martin's stations on the Licking River. On the 22d of June, Col. Byrd, of the British service, appeared before Ruddle's station with six hundred Indians and Canadians, and several pieces of artillery. Resistance was hopeless; the fort gates were thrown open, and the garrison surrendered at discretion. The same scene was acted at Martin's station. Then the whole force commenced a precipitate retreat; and many of the women and children loaded with plunder by the Indians, being unable to keep up, were tomahawked and scalped. At this time there were not over three hundred fighting men north of Kentucky River, and these were scattered in stations many miles apart; the enemy, therefore, could easily have depopulated the country in a week or two, but for some unknown reason failed to prosecute the campaign any further.

Just previous to the invasion by Byrd, Col. George Rogers Clarke built Fort Jefferson on the Mississippi, in the country of the Chickasaws, a few miles below the mouth of the Ohio. In May, 1780, about fourteen hundred Indians, with one hundred and forty British troops from Mackinaw, made an unsuccessful attack upon St. Louis, then a town of less than one thousand inhabitants, and within the dominions of Spain, that power being then at war with England. After killing and scalping about twenty persons, who happened to be in the fields adjacent, the Indians, from some unknown reason, refused to co-operate any longer with the British troops.

In the summer, eight hundred men, under Col. Brodhead, assembled at Wheeling, and marched against the Indian villages in the forks of the Muskingum, on the site of Coshocton, Ohio. They destroyed one or two villages, and took a number of prisoners; among whom were sixteen warriors, who, by decision of a council of war, were led out and, in cool blood, tomahawked and scalped. A noble looking chief came into camp on a mission of peace the next morning, under a promise of safety. While conversing with the commander, Whetzel, an Indian fighter came up behind, and with a blow of his tomahawk, cleft open his skull. On the retreat, the remaining prisoners, except a few women and children were massacred.

On Clarke's return from Fort Jefferson, he organized a force of

A TOWN, IN NEBRASKA, OF PRAIRIE DOGS.

"Their towns equal in extent and population the largest cities of Europe; some extending many miles in length, with considerable regularity in their streets, and their houses of a uniform style of architecture."

one thousand men, and in July, rapidly and secretly marched into the Miami country, and destroyed the Piqua towns on Mad River, and Chilicothe on the Little Miami. In the year following, 1781, the Chickasaws, indignant at the erection of Fort Jefferson upon their soil, led on by Colbert, a half-breed, besieged it with much vigor. Gen. Clarke marched from Kaskaskia with a reinforcement, and relieved the fort from its perilous situation. Shortly after, Clarke dismantled the fort, and the Chickasaws ceased their hostility.

In the ensuing spring, 1782, the Indians again infested the frontiers. In March, twenty-five Wyandots invested Estill's station; on their retiring, Capt. Estill pursued with precisely the same number of men. As they met the opposing parties tree'd—and never was battle more like single combat—each man sought his man, and fired only when he saw his mark. The firing was deliberate, and each cautiously looked for his foe at the peril of his life. For two hours this desperate contest was kept up, until about half of each party were slain, when Lieut. Miller and six men fled; this gave the Indians the ascendancy, and the battle was soon finished. Estill, in a deadly struggle with a powerful warrior, received the knife of his antagonist in his heart; just after, his arm gave way at a former fracture, and that instant, the Indian received his death from the unerring rifle of one of the whites.

A melancholy disaster, about the same time, befell a body of one hundred and seven United States troops, under Captain Laherty, on their way down the Ohio to Fort Steuben, at the Falls of the Ohio. They were attacked by an overwhelming force of Indians, near the mouth of the Great Miami, and, although making a brave resistance, were compelled to retreat, with the loss of about fifty slain.

Massacre of the Moravian or Christian Indians.—As early as the year 1762, the Moravian missionaries, Post and Heckewelder, established a mission among the Indians on the Tuscarawas. Before the close of the war of the Revolution, they had three flourishing stations or villages, viz: Shoenbrun, Gnadenhutten and Salem. These were respectively about five miles apart, and stood near fifty miles west of the site of Steubenville, Ohio. In the war, their position was eminently dangerous. They were midway between the hostile towns on the Sandusky and the frontier settlements, and being on the direct route of war parties of either, were compelled occasionally to give sustenance and shelter to both. This excited the jealousy of the contending races, although they preserved a strict neutrality, and looked with horror upon the shedding of blood.

In February, 1782, many murders were committed upon the Upper Ohio and the Monongahela by the hostile Indians. The settlers believing that the Moravians were either concerned in these murders, or had harbored those who were, determined to

destroy their towns, the existence of which they deemed dangerous to their safety. Accordingly, in March, about ninety volunteers assembled under the command of Colonel David Williamson, in the Mingo Bottom, just below the site of Steubenville. Arriving in the vicinity of Gnadenhutten, they, on the morning of the 8th, surrounded and entered the town, where they found a large party of Indians in a field gathering corn. They informed the Indians that they had come on an errand of peace and friendship; that they were going to take them to Fort Pitt for protection. The unsuspecting Indians, pleased at the prospect of their removal, delivered up their arms which they used for hunting, and commenced preparing breakfast for themselves and guests. An Indian messenger was dispatched to Salem, to apprise the brethren there of the new arrangement, and both companies then returned to Gnadenhutten. On reaching the village, a number of mounted militia started for the Salem settlement, but ere they reached it, found that the Moravian Indians at that place had already left their cornfields, by the advice of the messenger, and were on the road to join their brethren at Gnadenhutten. Measures had been adopted by the militia to secure the Indians whom they had first decoyed into their power. They were bound, confined in two houses, and well guarded. On the arrival of the Indians from Salem (their arms having been previously secured without suspicion of any hostile intention), they were also fettered, and divided between the two prison-houses—the males in one, the females in the other. The number thus confined in both, including men, women and children, has been estimated from ninety to ninety-six.

A council was then held to determine how the Moravian Indians should be disposed of. This self-constituted military court embraced both officers and privates. The late Dr. Dodridge, in his published notes on Indian wars, etc., says: "Colonel Williamson put the question, whether the Moravian Indians should be taken prisoners to Fort Pitt, or *put to death?*" requesting those who were in favor of saving their lives to step out and form a second rank. Only eighteen out of the whole number stepped forth as advocates of mercy. In these the feelings of humanity were not extinct. In the majority, which was large, no sympathy was manifested. They resolved to *murder* (for no other word can express the act) the whole of the Christian Indians in their custody. Among these were several who had contributed to aid the missionaries in the work of conversion and civilization—two of whom emigrated from New Jersey after the death of their spiritual pastor, the Rev. David Brainard. One woman, who could speak good English, knelt before the commander and begged his protection. Her supplication was unavailing. They were ordered to prepare for death; but the warning had been anticipated. Their firm belief in their new creed was shown forth in the sad hour of their tribulation by religious exercises of preparation. The orisons of these devoted people were already ascending to the throne of the

Most High!—the sound of the Christian's hymn and the Christian's prayer found an echo in the surrounding woods, but no responsive feeling in the bosoms of their executioners. With gun, and spear, and tomahawk, and scalping-knife, the work of death progressed in these slaughter-houses, until not a sigh or moan was heard to proclaim the existence of human life within—all save two—two Indian boys escaped, as if by a miracle, to be witnesses in after times of the savage cruelty of the white man toward their unfortunate race.

Of the number thus cruelly murdered by the backwoodsmen of the Upper Ohio, between fifty and sixty were women and children—some of them innocent babes. No resistance was made—one only attempted to escape. The whites finished the tragedy by setting fire to the town, including the slaughter-houses with the bodies in them, all of which were consumed. A detachment was sent to the upper town, Shoenbrun; but the people having received information of what was transpiring below, had deserted it.

Those engaged in the campaign were generally men of standing at home. When the expedition was formed, it was given out to the public that its sole object was to remove the Moravians to Pittsburgh, and by destroying the villages, deprive the hostile savages of a shelter. In their towns, various articles plundered from the whites were discovered. One man is said to have found the bloody clothes of his wife and children, who had recently been murdered. These articles doubtless had been purchased of the hostile Indians. The sight of these, it is said, bringing to mind the forms of murdered relations, wrought them up to an uncontrollable pitch of frenzy, which nothing but blood could satisfy.

In the year 1799, when the remnant of the Moravian Indians were recalled by the United States to reside on the same spot, an old Indian, in company with a young man by the name of Carr, walked over the desolate scene, and showed to the white man an excavation, which had formerly been a cellar, and in which were still some mouldering bones of the victims, though seventeen years had passed since their tragic death—the tears, in the meantime, falling down the wrinkled face of this aged child of the Tuscarawas.

Crawford's Defeat.—At the time of the massacre, less than half of the Moravian Indians were at their towns, on the Tuscarawas, the remainder having been carried off by the hostile Indians to Sandusky, had settled these in their vicinity. Immediately after the return of Williamson's men, what may be called a second Moravian campaign was projected; the object being first to finish the destruction of the Christian Indians at their new establishment on the Sandusky, and then destroy the Wyandot towns on the same river. The long continuance of the Indian war, the many murders and barbarities committed upon the frontiers, had so wrought upon the inhabitants as to create an indiscriminate thirst for revenge. Having had a taste of blood and plunder in their recent expedition without loss or danger on their

part, it was now determined not to spare the lives of any Indians who might fall into their hands, whether friends or foes.

On the 25th of May, 1782, four hundred and eighty men, principally from the Upper Ohio, assembled at the Old Mingo towns, near the site of Steubenville. At this place they chose Colonel William Crawford commander, his competitor being Colonel Williamson. Crawford accepted the office with great reluctance. Soon after his men exhibited such an utter disregard to military order, that he was depressed with a presentiment of evil.

Notwithstanding the secrecy and dispatch of the enterprise, the Indian spies discovered their rendezvous, on the Mingo Bottom; knew their number and destination. They visited every encampment on their leaving it, and saw written on the barks of trees and scraps of paper, that "*no quarter* was to be given to any Indian, whether *man, woman or child*."

Their route was by the "Williamson Trail," through the burnt Moravian towns. On the 6th of June, they arrived at the site of the Moravian villages, on a branch of the Sandusky. Here, instead of meeting with Indians and plunder, they found nothing but vestiges of desolation. A few huts, surrounded by high grass, alone remained; their intended victims having, some time before, moved to the Scioto, some eighteen miles south. A council then decided to march on north one day longer, and if then no Indian towns were reached, to retreat. About two o'clock the next day, while on their march through the Sandusky plains, the advanced guard were driven in by Indians concealed in great numbers in the high grass. The action then became general, and the firing was incessant and heavy until dark. In this battle the whites had the advantage, and lost but a few men. The Indians were driven from the woods, and prevented from gaining a strong position on the right flank by the vigilance and bravery of Major Leet. During the night, both armies lay upon their arms behind a line of fires to prevent surprise. The next day the Indians were seen in large bodies traversing the plains, while others were busy carrying off their dead and wounded. At a council of officers, Colonel Williamson proposed marching, with one hundred and fifty volunteers, to Upper Sandusky; but the commander opposed it, stating that the Indians, whose numbers were hourly increasing, would attack and conquer their divided forces in detail. The dead were buried, and preparations made for a retreat after dark. The Indians perceiving their intention, about sunset attacked them with great fury in all directions, except that of Sandusky. In the course of the night, the army commenced their retreat, regained their old trail by a circuitous route, and continued on with but slight annoyance from the enemy. Unfortunately, when the retreat commenced, a large number erroneously judging that the Indians would follow the main body, broke off into small parties, and made their way toward their homes, in different directions. These the Indians for days pursued in detachments with such

activity, that but very few escaped—some being killed almost within sight of the Ohio River.

Soon after the retreat began, Colonel Crawford having missed his son and several of his connections, halted, and unsuccessfully searched the line for them as it passed on, and then, owing to the weariness of his horse, was unable to overtake the retreating army. Falling in company with Dr. Knight and others, they kept on until the third day, when they were attacked, and Crawford and Knight captured. They were taken to an Indian encampment in the vicinity, where they found nine other prisoners, and all the next morning were conducted toward the Tyemochte, by Pipe and Wingenund, Delaware chiefs, except four of them, who were killed and scalped on the way.

At a Delaware town on the Tyemochte, a few miles north-westerly from the site of Upper Sandusky, preparations were made for the burning of Colonel Crawford. In the vicinity, the remaining five of the nine prisoners were tomahawked and scalped by squaws and boys. Crawford's son and son-in-law were executed at a Shawanese town.

The account of the burning of Crawford is thus given by Dr. Knight, his companion, who subsequently escaped. When we went to the fire, the colonel was stripped naked, ordered to sit down by the fire, and then they beat him with sticks and their fists. Presently after I was treated in the same manner. They then tied a rope to the foot of a post about fifteen feet high, bound the colonel's hands behind his back, and fastened the rope to the ligature between his wrists. The rope was long enough for him to sit down, or walk round the post once or twice, and return the same way. The colonel then called to Girty, and asked if they intended to burn him? Girty answered yes. The colonel said he would take it all patiently. Upon this, Captain Pipe, a Delaware chief, made a speech to the Indians, viz: about thirty or forty men, and sixty or seventy squaws and boys.

When the speech was finished, they all yelled a hideous and hearty assent to what had been said. The Indian men then took up their guns and shot powder into the colonel's body, from his feet as far up as his neck. I think that not less than seventy loads were discharged upon his naked body. They then crowded about him, and to the best of my observation, cut off his ears. When the throng had dispersed a little, I saw the blood running from both sides of his head in consequence thereof.

The fire was about six or seven yards from the post to which the colonel was tied; it was made of small hickory poles, burnt quite through in the middle, each end of the poles remaining about six feet in length. Three or four Indians, by turns, would take up individually one of these burning pieces of wood, and apply it to his naked body, already burnt black with the powder. These tormentors presented themselves on every side of him with the burning fagots and poles. Some of the squaws took broad boards,

upon which they would carry a quantity of burning coals and hot embers, and throw on him, so that, in a short time, he had nothing but coals of fire and hot ashes to walk upon.

In the midst of these extreme tortures, he called to Simon Girty, and begged of him to shoot him; but Girty making no answer, he called to him again. Girty then, by way of derision, told the colonel he had no gun, at the same time turning about to an Indian who was behind him, laughed heartily, and by all his gestures, seemed delighted at the horrid scene.

Girty then came up to me, and bade me prepare for death. He said, however, I was not to die at that place, but to be burnt at the Shawanese towns. He swore by G-d I need not expect to escape death, but should suffer it in all its extremities.

Colonel Crawford, at this period of his sufferings, besought the Almighty to have mercy on his soul, spoke very low, and bore his torments with the most manly fortitude. He continued in all the extremities of pain for an hour and three-quarters or two hours longer, as near as I can judge, when at last, being almost exhausted, he lay down on his belly; they then scalped him, and repeatedly threw the scalp in my face, telling me, "that was my great captain." An old squaw (whose appearance every way answered the ideas people entertain of the devil) got a board, took a parcel of coals and ashes, and laid them on his back and head after he had been scalped. He then raised himself upon his feet, and began to walk round the post. They next put a burning stick to him, as usual, but he seemed more insensible of pain than before.

The Indian fellow who had me in charge, now took me away to Captain Pipe's house, about three-quarters of a mile from the place of the colonel's execution. I was bound all night and thus prevented from seeing the last of the horrid spectacle. Next morning being June 12, the Indian untied me, painted me black, and we set off for the Shawanese town, which he told me was somewhat less than forty miles distant from that place. We soon came to the spot where the colonel had been burnt, as it was partly on our way; I saw his bones lying among the remains of the fire, almost burnt to ashes; I suppose, after he was dead, they laid his body on the fire. The Indian told me that was my big captain, and gave the scalp halloo.

Most of the prisoners taken in this campaign were burned to death, with cruel tortures, in retaliation for the massacre of the Moravian Indians, who were principally Delawares.

This invasion was the last made from the region of the Upper Ohio during the war. But the Indians, encouraged by their success, overran these settlements with scalping parties. In September, three hundred Indians for three days unsuccessfully invested the fort at Wheeling. A detachment of one hundred of these made an attack upon Rice's Fort, twelve miles north. Although defended by only six men, they were obliged to retire with loss.

Siege of Bryant's Station.—Shortly after the defeat of Crawford about six hundred Indians, under the influence of the British at Detroit, assembled at old Chilicothe to proceed on an expedition intended to exterminate the "Long Knife" from Kentucky. On the night of the 14th of August, 1782, this body gathered around Bryant's station, a fort on the Elkhorn, about five miles from Lexington.

The fort itself contained about forty cabins, placed in parallel lines, connected by strong palisades, and garrisoned by forty or fifty men. It was a parallelogram of thirty rods in length by twenty in breadth, forming an inclosure of nearly four acres, which was protected by digging a trench four or five feet deep, in which strong and heavy pickets were planted by ramming the earth well down against them. These were twelve feet out of the ground, being formed of hard, durable timber, at least a foot in diameter. Such a wall, it must be obvious, defied climbing or leaping, and indeed any means of attack, cannon excepted. At the angles were small squares or block-houses, which projected beyond the palisades and served to impart additional strength at the corners, as well as permitted the besieged to pour a raking fire across the advanced party of the assailants. Two folding gates were in front and rear, swinging on prodigious wooden hinges, sufficient for the passage in and out of men or wagons in times of security. These were of course provided with suitable bars.

This was the state of things, as respects the means of defense, at Bryant's station on the morning of the 15th of August, 1782, while the savages lay concealed in the thick weeds around it, which in those days grew so abundantly and tall, as would have sufficed to conceal mounted horsemen. They waited for daylight, and the opening of the gates for the garrison to get water for the day's supply from an adjacent spring, before they should commence the work of carnage.

It seems that the garrison here were rather taken off their guard. Some of the palisade work had not been secured as permanently as possible, and the original party which built the fort had been tempted, in the hurry of constructing and their fewness of hands, to restrict its extent so as not to include a spring of water within its limits. Great as were these disadvantages, they were on the eve of exposure to a still greater one, for had the attack been delayed a few hours, the garrison would have been found disabled by sending off a reinforcement to a neighboring station—Holder's settlement—on an unfounded alarm that it was attacked by a party of savages. As it was, no sooner had a few of the men made their appearance outside of the gate than they were fired on and compelled to regain the inside.

According to custom the Indians resorted to stratagem for success. A detachment of one hundred warriors attacked the southeast angle of the station, calculating to draw the entire body of the besieged to that quarter to repel the attack, and thus enable the

residue of the assailants, five hundred strong, who were on the opposite side in ambush near the spring, to take advantage of its unprotected situation, when the whole force of the defense should be drawn off to resist the assault at the southeast. Their purpose, however, was comprehended inside, and instead of returning the fire at the smaller party, they secretly dispatched an express to Lexington for assistance, and began to repair the palisades, and otherwise to put themselves in the best possible posture of defense.

The more experienced of the garrison felt satisfied that a powerful party was in ambush near the spring, but at the same time they supposed that the Indians would not unmask themselves until the firing upon the opposite side of the fort was returned with such warmth as to induce the belief that the feint had succeeded. Acting upon this impression, and yielding to the urgent necessity of the case, they summoned all the women without exception, and explaining to them the circumstances in which they were placed, and the improbability that any injury would be offered them until the firing had been returned from the opposite side of the fort, they urged them to go in a body to the spring and each to bring up a bucket full of water. Some of the ladies had no relish for the undertaking, and asked why the men could not bring water as well as themselves? observing that *they* were not bullet-proof, and that the Indians made no distinction between male and female scalps. To this it was answered, that the women were in the habit of bringing water every morning to the fort, and that if the Indians saw them engaged as usual, it would induce them to believe that their ambushade was undiscovered, and that they would not unmask themselves for the sake of firing upon a few women, when they hoped, by remaining concealed a few moments longer, to obtain complete possession of the fort. That if *men* should go down to the spring the Indians would immediately suspect that something was wrong, would despair of succeeding by ambushade, and would instantly rush upon them, follow them into the fort, or shoot them down at the spring. The decision was soon over. A few of the boldest declared their readiness to brave the danger, and the younger and more timid rallying in the rear of these veterans, they all marched down in a body to the spring, within point blank shot of five hundred Indian warriors! Some of the girls could not help betraying symptoms of terror, but the married women in general moved with a steadiness and composure which completely deceived the Indians. Not a shot was fired. The party were permitted to fill their buckets one after another, without interruption, and although their steps became quicker and quicker on their return, and when near the fort, degenerated into a rather unmilitary celerity attended with some little crowding at the gate, yet not more than one-fifth of the water was spilled.

When an ample supply of water had been thus obtained, and the neglected defenses completed, a party of thirteen men sallied out

in the direction in which the assault had been made. They were fired on by the savages and driven again within the palisade, but without sustaining any loss of life. Immediately the five hundred on the opposite side rushed to the assault of what they deemed the unprotected side of the fort without entertaining any doubts of their success. A well directed fire, however, put them promptly to flight. Some of the more daring and desperate approached near enough with burning arrows to fire the houses, one or two of which were burned, but a favorable wind drove the flames away from the mass of the buildings, and the station escaped the danger threatened from this source. A second assault from the great body of the Indians was repelled with the same vigor and success with the first.

Disappointed of their object thus far, the assailants retreated and concealed themselves under the bank of the creek to await and intercept the arrival of the assistance, which they were well aware was on its way from Lexington. The express from Bryant's station reached that town without difficulty, but found its male inhabitants had left there to aid in the defense of Holder's station, which was reported to be attacked. Following their route he overtook them at Boonesborough, and sixteen mounted men, with thirty on foot, immediately retraced their steps for the relief of the besieged at Bryant's. When this reinforcement approached the fort the firing had entirely ceased, no enemy was visible, and the party advanced in reckless confidence that it was either a false alarm or that the Indians had abandoned the siege. Their avenue to the garrison was a lane between two cornfields, which growing rank and thick formed an effectual hiding-place to the Indians even at the distance of a few yards. The line of ambush extended on both sides nearly six hundred yards. Providentially it was in the heat of midsummer, and dry accordingly, and the approach of the horsemen raised a cloud of dust so thick as to compel the enemy to fire at random, and the whites happily escaped without losing a man. The footmen, on hearing the firing in front, dispersed amidst the corn in hopes of reaching the garrison unobserved. Here they were intercepted by the savages, who threw themselves between them and the fort, and but for the luxuriant growth of corn they must all have been shot down. As it was, two men were killed and four wounded of the party on foot before it succeeded in making its way into the fort.

Thus reinforced, the garrison felt assured of safety, while in the same measure the assailing party began to despair of success.

One expedient remained, which was resorted to for the purpose of intimidating the brave spirits who were gathered for the defense of their wives and little ones. As the shades of evening approached, Girty, who commanded the party, addressed the inmates of the fort. Mounting a stump from which he could be distinctly heard, with a demand for the surrender of the place, he assured the garrison that a reinforcement with cannon would arrive that night; that the station must fall; that he could assure them of protection

if they surrendered, but could not restrain the Indians if they carried the fort by storm; adding, he supposed they knew who it was that thus addressed them. A young man, named Reynolds, fearing the effect which the threat of cannon might have on the minds of the defending party with the fate of Martin's and Ruddle's stations fresh in their memories, left no opportunity for conference by replying instantly, that he knew him well and held him in such contempt that he had called a good-for-nothing dog he had by the name of Simon Girty. "Know you?" added he, "we all know you for a renegade, cowardly villain, that delights in murdering women and children! Wait until morning and you will find on what side the reinforcements are. We expect to leave not one of your cowardly souls alive, and if *you* are caught, our women shall whip you to death with hickory switches. Clear out, you cut-throat villain." Some of the Kentuckians shouted out, "Shoot the d——d rascal!" and Girty was glad to retreat out of the range of their rifles, lest some one of the garrison might be tempted to adopt the advice.

The night passed away in uninterrupted tranquillity, and at daylight in the morning the Indian camp was found deserted. Fires were still burning brightly and several pieces of meat were left upon their roasting-sticks, from which it was inferred that they had retreated just before daybreak.

Battle of the Blue Licks.—Early in the day reinforcements began to drop in, and by noon one hundred and sixty-seven men were assembled at Bryant's station, among whom were Cols. Boone, Todd, and Trigg; and Majors Harland, McBride, M'Gary, and Levy Todd; and Captains Bulzer and Gordon; of the last six named, except Todd and M'Gary, all fell in the subsequent battle. A tumultuous conversation ensued, and it was unanimously resolved to pursue the enemy forthwith, notwithstanding that they were three to one in numbers. The Indians, contrary to their usual custom, left a broad and obvious trail, and manifested a willingness to be pursued. Notwithstanding, such was the impetuosity of the Kentuckians that they overlooked these considerations, and hastened on with fatal resolution, most of them being mounted.

The next day about noon they came, for the first time, in view of the enemy at the Lower Blue Licks. A number of Indians were seen ascending the rocky ridge on the opposite side of the Licking. They halted upon the appearance of the Kentuckians, gazed at them a few moments, and then calmly and leisurely disappeared over the top of the hill. An immediate halt ensued. A dozen or twenty officers met in front of the ranks, and entered into consultation. The wild and lonely aspect of the country around them, their distance from any point of support, with the certainty of their being in the presence of a superior enemy, seems to have inspired a portion of seriousness bordering upon awe. All eyes were now turned upon Boone, and Col. Todd asked his opinion as

to what should be done. The veteran woodsman, with his usual unmoved gravity, replied :

That their situation was critical and delicate ; that the force opposed to them was undoubtedly numerous and ready for battle, as might readily be seen from the leisurely retreat of the few Indians who had appeared on the crest of the hill ; that he was well acquainted with the ground in the neighborhood of the Lick, and was apprehensive that an ambuscade was formed at the distance of a mile in advance where two ravines, one upon each side of the ridge, ran in such a manner that a concealed enemy might assail them at once both in front and flank before they were apprised of the danger.

It would be proper, therefore, to do one of two things. Either to await the arrival of Logan, who was now undoubtedly on his march to join them with a strong force from Lincoln, or, if it was determined to attack them without delay, that one half of their number should march up the river, which there bends in an elliptical form, cross at the rapids and fall upon the rear of the enemy while the other division attacked in front. At any rate, he strongly urged the necessity of reconnoitering the ground carefully before the main body crossed the river.

Boone was heard in silence and with deep attention. Some wished to adopt the first plan, others preferred the second, and the discussion threatened to be drawn out to some length, when the boiling ardor of M'Gary, who could never endure the presence of an enemy without instant battle, stimulated him to an act which had nearly proved destructive to his country. He suddenly interrupted the consultation with a loud whoop resembling the war-cry of the Indians, spurred his horse into the stream, waved his hat over his head, and shouted aloud : " Let all who are not cowards follow me ! " The words and the action together produced an electrical effect. The mounted men dashed tumultuously into the river, each striving to be foremost. The footmen were mingled with them in one rolling and irregular mass.

No order was given, and none observed. They struggled through a deep ford as well as they could, M'Gary still leading the van, closely followed by Majors Harland and McBride. With the same rapidity they ascended the ridge, which, by the trampling of Buffalo foragers, had been stripped bare of all vegetation, with the exception of a few dwarfish cedars, and which was rendered still more desolate in appearance, by the multitude of rocks, blackened by the sun, which was spread over its surface.

Suddenly the van halted. They had reached the spot mentioned by Boone, where the two ravines head, on each side of the ridge. Here a body of Indians presented themselves, and attacked the van. M'Gary's party instantly returned the fire, but under great disadvantage. They were upon a bare and open ridge ; the Indians in a bushy ravine. The center and rear, ignorant of the ground, hurried up to the assistance of the van, but were soon

stopped by a terrible fire from the ravine, which flanked them. They found themselves inclosed as if in the wings of a net, destitute of proper shelter, while the enemy were, in a great measure, covered from their fire. Still, however, they maintained their ground. The action became warm and bloody. The parties gradually closed, the Indians emerged from the ravine, and the fire became mutually destructive. The officers suffered dreadfully. Todd and Trigg, in the rear; Harland, M'Bride and young Boone, in front, were already killed.

The Indians gradually extended their line, to turn the right of the Kentuckians, and cut off their retreat. This was quickly perceived by the weight of the fire from that quarter, and the rear instantly fell back in disorder, and attempted to rush through their only opening to the river. The motion quickly communicated itself to the van, and a hurried retreat became general. The Indians instantly sprung forward in pursuit, and falling upon them with their tomahawks, made a cruel slaughter. From the battleground to the river, the spectacle was terrible. The horsemen generally escaped, but the foot, particularly the van, which had advanced farthest within the wings of the net, were almost totally destroyed. Col. Boone, after witnessing the death of his son and many of his dearest friends, found himself almost entirely surrounded at the very commencement of the retreat.

Several hundred Indians were between him and the ford, to which the great mass of the fugitives were bending their flight, and to which the attention of the savages was principally directed. Being intimately acquainted with the ground, he, together with a few friends, dashed into the ravine which the Indians had occupied, but which most of them had now left to join in the pursuit. After sustaining one or two heavy fires, and baffling one or two small parties, who pursued him for a short distance, he crossed the river below the ford, by swimming, and entering the wood at a point where there was no pursuit, returned by a circuitous route to Bryant's station. In the meantime, the great mass of the victors and vanquished crowded the bank of the ford.

The slaughter was great in the river. The ford was crowded with horsemen and foot and Indians, all mingled together. Some were compelled to seek a passage above by swimming; some, who could not swim, were overtaken and killed at the edge of the water. A man by the name of Netherland, who had formerly been strongly suspected of cowardice, here displayed a coolness and presence of mind, equally noble and unexpected.

Being the first in gaining the opposite bank, he then instantly checked his horse, and in a loud voice, called upon his companions to halt, fire upon the Indians, and save those who were still in the stream. The party instantly obeyed; and facing about, poured a close and fatal discharge of rifles upon the foremost of the pursuers. The enemy instantly fell back from the opposite bank, and gave time for the harassed and miserable footmen to cross in safety.

The check, however, was but momentary. Indians were seen crossing in great numbers above and below, and the flight again became general. Most of the foot left the great buffalo track, and plunging into the thickets, escaped by a circuitous route to Bryant's station.

But little loss was sustained after crossing the river, although the pursuit was urged keenly for twenty miles. From the battleground to the ford, the loss was very heavy; and at that stage of the retreat, there occurred a rare and striking instance of magnanimity, which it would be criminal to omit. The reader could not have forgotten young Reynolds, who replied with such rough but ready humor to the pompous summons of Girty, at the siege of Bryant's station. This young man after bearing his share in the action with distinguished gallantry, was galloping with several other horsemen in order to reach the ford. The great body of fugitives had preceded them, and their situation was in the highest degree critical and dangerous.

About halfway between the battleground and the river, the party overtook Capt. Patterson, on foot, exhausted by the rapidity of the flight, and in consequence of former wounds received from the Indians, so infirm as to be unable to keep up with the main body of the men on foot. The Indians were close behind him, and his fate seemed inevitable. Reynolds, upon coming up with this brave officer, instantly sprung from his horse, aided Patterson to mount into the saddle, and continued his own flight on foot. Being remarkably active and vigorous, he contrived to elude his pursuers, and turning off from the main road, plunged into the river near the spot where Boone had crossed, and swam in safety to the opposite side. Unfortunately, he wore a pair of buckskin breeches, which had become so heavy and full of water as to prevent his exerting himself with his usual activity, and while sitting down for the purpose of pulling them off, he was overtaken by a party of Indians, and made prisoner.

A prisoner is rarely put to death by the Indians, unless wounded or infirm, until they return to their own country; and then his fate is decided in solemn council. Young Reynolds, therefore, was treated kindly, and compelled to accompany his captors in the pursuit. A small party of Kentuckians soon attracted their attention; and he was left in charge of three Indians, who, eager in pursuit, in turn committed him to the charge of one of their number, while they followed their companions. Reynolds and his guard jogged along very leisurely; the former totally unarmed; the latter, with a tomahawk and rifle in his hands. At length the Indian stopped to tie his moccasin, when Reynolds instantly sprung upon him, knocked him down with his fist, and quickly disappeared in the thicket which surrounded them. For this act of generosity, Capt. Patterson afterward made him a present of two hundred acres of first-rate land.

The melancholy intelligence rapidly spread throughout the

country, and the whole land was covered with mourning, for it was the greatest loss that Kentucky had ever experienced in Indian warfare. Sixty Kentuckians were slain and a number taken prisoners. The loss of the Indians while the battle lasted, was also considerable, though far inferior to that of the whites.

On the very day of the battle Colonel Logan arrived at Bryant's station with four hundred and fifty men. Fearful of some disaster, he marched on with the utmost diligence, and soon met the foremost of the fugitives. Learning from them the said tidings, he continued on, hoping to come up with the enemy at the field of battle, which he reached on the second day. The enemy were gone, but the body of the Kentuckians still lay unburied on the spot where they had fallen. Immense flocks of buzzards were soaring over the battleground, and the bodies of the dead had become so much swollen and disfigured that it was impossible to recognize the features of the most particular friends. Many corpses were floating near the shore of the northern bank, already putrid from the action of the sun, and partially eaten by fishes. The whole were carefully collected by Colonel Logan, and interred as decently as the nature of the soil would permit.

As soon as intelligence of this disastrous battle reached Colonel George Rogers Clarke, who then resided at Louisville, he set on foot an expedition against the Shawanese. In the latter part of September, one thousand Kentuckians rendezvoused at the mouth of the Licking, and marching northward a distance of near one hundred miles, destroyed the Indian towns near the site of Piqua, Ohio. From that time forward the Indians never again as a body invaded the country south of the Ohio, and a few months later hostilities ceased between the United States and Great Britain.

. THE HARD WINTER OF 1780.

THE winter of 1779-'80, was a marked era in the history of the West. It proved to be uncommonly severe, insomuch that it was distinguished as the Hard Winter. The rivers, creeks, and branches were covered with ice of great thickness, where the water was sufficient; while the latter were generally converted into solid crystal. The snow, by repeated falls, increased to an unusual depth, and continued for an extraordinary length of time: so that men and beasts could, with much difficulty, travel; and suffered greatly in obtaining food, or died of want and the cold combined.

Many families traveling to Kentucky in this season, were overtaken in the wilderness, and their progress arrested by the severity of the weather. Compelled to encamp and abide the storm, the pains of both hunger and frost were inflicted on them in many instances in a most excruciating degree. For when their traveling stock of provisions was exhausted, as was soon the case with many,

and some of these without a hunter or live stock; they were left without resource, but in begging at other camps. And even where there were hunters, they found it extremely difficult to traverse the hills for game, or to find it when sought; while in a short time the poor beasts, oppressed by cold and want of food, soon became lean and even unfit for use, or unwholesome if eaten. Such also became the case with the tame cattle of the emigrants—many of them died for want of nourishment, or were drowned by floods, as they happened to be on the hills where there was no cane, or on the bottoms which overflowed on the breaking up of the ice. And it is a fact, that part of those dead carcasses became the sole food of some of the unfortunate and helpless travelers. Their arrival in Kentucky, when effected, offered them a supply of wholesome meat, but corn was scarce, and bread, at first obtained with difficulty, soon disappeared and could not be procured.

The very great number who had moved into the country from the interior in the year 1779, compared with the crop of that year, had nearly exhausted all that kind of supply before the end of the winter, and long before the next crop was even in the roasting ear state, in which it was eaten as a substitute for bread, there being of that article none to be had until the new crop became hard. And while the corn was growing to maturity for use, wild meat, the game of the forest, was the only solid food of the multitude; and this, without bread, with milk and butter, was the daily diet of men, women, and children for some months. Delicate or robust, well or ill, rich or poor, black or white, one common fare supplied, and the same common fate attended all. The advance of the vernal season brought out the Indians as usual; and danger of life and limb was added, to whatever else was disagreeable or embarrassing in the condition of the people.

DANIEL BOONE, THE PIONEER OF KENTUCKY.

THE celebrated Daniel Boone was born in Bucks county, Pennsylvania, in February, 1735—three years after the birth of Washington. When Daniel was a small boy, his family removed to the vicinity of Reading, in Berks county. This was then on the frontiers, and it was here that he received those impressions of character that were so strikingly displayed in his subsequent life. From childhood he delighted to range the woods, watch the wild animals, and contemplate the beauties of nature. He early showed a passion for hunting. No Indian could aim his rifle, find his way through the pathless forest, or search out the retreat of game more readily than Boone. When he was about eighteen years old his family made a second removal to the Yadkin, a mountain stream in the north-western part of North Carolina. There he married and followed the joint occupation of farmer and hunter. Accustomed, when hunting, to be much alone, he acquired the habit of contemplation

and of self-possession. His mind was not of the most ardent nature; nor does he ever seem to have sought knowledge through the medium of books.

It was on the 1st of May, 1769, that Boone, then the father of a family, made a temporary resignation of his domestic happiness to wander through the rough and savage wilderness, bordering on the Cumberland Mountains, in quest of the far-famed, but little known, country of Kentucky. In this tour he was accompanied by John Finley, John Stewart, Joseph Holden, William Coole, and James Monay. On the 7th of June following, after a journey of five hundred miles, and nearly half of it destitute of a path, they arrived on Red River, where Finley had formerly been as an Indian trader. Here the party determined to take repose after their fatigue, and made themselves a shelter of bark to cover their heads from the showers of the day and the cold dews of night. It was in an excursion from this camp that Daniel Boone first saw with wonder the beauties, and inhaled with delight the odors of a Kentucky summer, on the plains of Licking, Elkhorn, etc. It was also in one of his peregrinations from a second camp that Boone and Stewart, rising the top of a hill, encountered a band of savages. They made prisoners of both, and plundered them of what supplies they had. Seven days were they detained, compelled to march by day, and closely watched by night; when, as a consequence of their well dissembled contentment, the Indians resigned themselves to sleep without a guard on their captives, and they made their escape. Boone and his companion, once more at large, returned to their former camp, which had been plundered and was deserted by the rest of the company, who, alarmed by the appearance of the enemy, had fled home to North Carolina. About this time, Squire Boone, the brother of Daniel, following from Carolina, came up with him and furnished a few necessaries, especially some powder and lead, indispensable to their existence.

Soon after this period John Stewart was killed by the Indians, and the two Boones remained the only white men in the forests of Kentucky. They continued, during the succeeding winter, the only tenants of a cabin, which they, with tomahawks, erected of poles and bark to shelter themselves from the inclemency of the season.

The death of John Stewart, being the first perpetrated by the Indians on the white adventurers in Kentucky, deserves to be particularly commemorated. Upon this subject a few facts only have been preserved by tradition. It was in 1769, after Squire Boone had joined his brother and Stewart who had recently been prisoners with the Indians, that the Indians becoming more hostile had recourse to death, instead of bondage, as the surer method of getting rid of their new rivals in the art of hunting. As Boone and his companions were traversing the forest, just disrobed of its foliage, they were suddenly met on the side of a cane-brake, and immediately fired on by a superior party of Indians. John Stewart received a mortal wound and fell while his comrades, incapable of

assisting him, immediately fled. An Indian rushed upon the fallen victim, and winding one hand in the hair on the crown of his head, with a large knife in the other hand took off the scalp, which left bare his skull.

In May, 1770, Squire Boone returned to North Carolina, leaving Daniel, without bread or salt or even a dog, to keep his camp.

Never was a man in greater need of fortitude to sustain his reflections, nor were ever reflections more natural, or without crime, more poignant than those of Boone. He cast his eyes toward the residence of a family always dear to him—he felt the pang which absence gave—he heaved the sigh which affection prompted—his mind was beset with apprehensions of various dangers—despondence stood ready to seize on his soul; when, grasping his gun and turning from the place, he reflected as he proceeded, that Providence had never yet forsaken him; nor, thought he, will I ever doubt its superintending beneficence. No man have I injured, why should I fear injury from any? I shall again see my family, for whom I am now seeking a future home, and happiness, the joy of the meeting, will repay me for all this pain. By this time he had advanced some distance into the extended wood, and progressing, gained an eminence, whence, looking around with astonishment, on the one hand he beheld the ample plain and beauteous fields; on the other the River Ohio, which rolled in silent dignity, marking the northwestern boundary of Kentucky with equal precision and grandeur. The chirping of the birds solaced his cares with music; the numerous deer and buffalo, which passed him in review, gave dumb assurance that he was in the midst of plenty—and cheerfulness once more possessed his mind.

Thus in a second paradise was a second Adam—if the figure is not too strong—giving names to springs, rivers, and places before unknown to civilized white men.

Squire Boone returned in the month of July, and the brothers met at the old camp, as it had been concerted between them. The two, in this year, traversed the country to the Cumberland River, and in 1771, returned to their families, determined to remove them to Kentucky. But this was not immediately practicable.

About the month of September, 1773, Daniel Boone sold his farm on the Yadkin, bade farewell to his less adventurous neighbors, and commenced his removal to Kentucky with his own and five other families. In Powell's Valley he was joined by forty men willing to risk themselves under his guidance. The party was proceeding in fine spirits, when, on the 10th of October, the rear of the company was attacked by a strong ambuscade of Indians, who killed six of the men, and among them the eldest son of Boone.

The Indians were repulsed,* and fled, but in the meantime, the cattle belonging to the sojourners were dispersed, the relatives of the deceased greatly affected, and the survivors generally, so disheartened by present feelings and future prospects, that it was

thought best to retreat to the settlement on Clinch River, distant about forty miles, which was done in good order, without further molestation. This being accomplished, Boone remained on the frontier with his family, a hunter still, until June, 1774. By this time, he was made known to the governor of Virginia, and solicited by him to repair to the rapids of the Ohio, to conduct from thence a party of surveyors, whose longer stay was rendered peculiarly dangerous by the increasing hostility of the northward Indians.

This service was undertaken by Boone, who, with Michael Stoner as his only companion, traveled the pathless regions between—reached the place of destination with great celerity, considering the difficulty of traveling without a path, found the surveyors, and piloted them safely home through the woods, after an absence of two months.

This year, there were open hostilities with the Shawanese and other northward Indians; and Boone being still in Virginia, received an order from Governor Dunmore to take the command of three contiguous forts on the frontier, with the commission of captain.

The campaign of that year, after the battle at Point Pleasant, terminated in a peace. Captain Boone being now at leisure, and Colonel Henderson and company having matured their project of purchasing from the southern Indians the lands on the south of the Kentucky River, he was solicited by them to attend the treaty to be held for that purpose. Their messenger delivering to him full instructions and authority on the subject, Boone accordingly attended at Watauga, in March, 1775; met the Indians, and made the purchase. It having been also resolved to settle the purchased territory, Boone was looked to as the most proper person to conduct the enterprise. A way was first to be explored and opened; at the request of the company, this was undertaken and executed by him, from Holston to the Kentucky River. The greater part of the route was extremely difficult, being much encumbered with hills, brush, and cane, and infested by hostile Indians, who repeatedly fired on the party with such effect, that four were killed, and five wounded. They had, however, a determined leader, who, being well supported, conducted them to their object. Being arrived on the bank of the river, in April, 1775, Boone, with the survivors of his followers, began to erect a fort at a salt spring or lick, where Boonesborough now stands. While building this fort, which employed the party, rendered feeble by its losses, until the ensuing June, one man was killed by the savages, who continued to harass them during the progress of the work. A fort, in those days, consisted of a blockhouse and contiguous cabins, inclosed with pickets. This being done, Boone left a part of his men in the fort; with the rest, he returned to Holston. Thence he proceeded to Clinch, and soon after, moved his family

to the first garrison in the country—as his wife and daughter were the first white women ever known in Kentucky.

Captain Boone having given to the new population of Kentucky a permanent establishment, and placed his own family in Boonesborough, felt all the solicitude of one in his situation, to insure its defense and promote its prosperity.

He continued one of the most useful and active men among the settlers, and throughout the war with the Indians, was greatly distinguished. In January, 1778, he, with twenty-seven others, while making salt at the Blue Licks for the different stations, were taken prisoners by the Indians.

They all were kindly treated and conducted to Old Chilicothe, on the Pickaway Plain, where they remained until March. Boone, with ten others, through the influence of Hamilton, the British governor, was taken to Detroit.

The governor took an especial fancy to Boone, and offered one hundred pounds for his ransom, but to no purpose, for the Indians also, had taken their fancy, and so great was it that they took him back to Old Chilicothe, adopted him into a family, and fondly caressed him. He mingled with their sports, shot, fished, hunted and swam with them, and had become deeply ingratiated in their favor, when on the 1st of June, they took him to assist them in making salt in the Scioto valley, at the old salt wells, near, or at, we believe, the present town of Jackson, Jackson county. They remained a few days, and when returned to Old Chilicothe, his heart was agonized by the sight of four hundred and fifty warriors, armed, painted, and equipped in all the paraphernalia of savage splendor, ready to start on an expedition against Boonesborough. To avert the cruel blow that was about to fall upon his friends, he alone, on the morning of the 16th of June, escaped from his Indian companions, and arrived in time to foil the plans of the enemy, and not only saved the borough which he himself had founded, but probably all the frontier parts of Kentucky, from devastation.

Some time during Boone's captivity, the Indians got out of food, and after having killed and eaten their dogs, were ten days without any other sustenance than that of a decoction made from the ooziings of the inner bark of white oak, while after drinking all were able to travel. At length, the Indians shot a deer, and boiled its entrails to a jelly, of which they all drank, and it soon acted freely on their bowels. They gave some to Boone, but his stomach refused it. After repeated efforts, they compelled him to swallow about half a pint, which he accomplished with wry faces and disagreeable retchings, much to the amusement of the simple savages, who laughed heartily. After this medicine had well operated, they told Boone he might eat; but that if he had done so before, it would have killed him. All then fell to and made amends for their long fast.

At the close of the war, Boone settled down quietly upon his

farm. But he was not long permitted to remain unmolested. His title, owing to the imperfect nature of the land laws of Kentucky, was legally decided to be defective, and Boone was deprived of all claim to the soil which he had explored, settled and so bravely defended. In 1795, disgusted with civilized society, he sought a new home in the wilds of the Far West, on the banks of the Missouri, then within the dominion of Spain. He was treated there with kindness and attention by the public authorities, and he found the simple manners of that frontier people exactly suited to his peculiar habits and temper. With them he spent the residue of his days, and was gathered to his fathers, September 26th, 1820, in the 86th year of his age. He was buried in a coffin which he had had made for years, and placed under his bed, ready to receive him whenever he should be called from these earthly scenes. In the summer of 1845, his remains were removed to Frankfort, Kentucky, and a monument erected by public spirited citizens of the place. In person, Boone was five feet ten inches in height, and of robust and powerful proportions. He was ordinarily attired as a hunter, wearing a hunting shirt and moccasins. His biographer, who saw him at his residence on the Missouri River, but a short time before his death, says, that on his introduction to Col. Boone, the impressions were those of surprise, admiration and delight. In boyhood, he had read of Daniel Boone, the pioneer of Kentucky, the celebrated hunter and Indian fighter; and imagination had portrayed a rough, fierce-looking, uncouth specimen of humanity, and of course, at this period of life, a fretful and unattractive old man. But in every respect the reverse appeared. His high, bold forehead was slightly bald, and his silvered locks were combed smooth; his countenance was ruddy and fair, and exhibited the simplicity of a child. His voice was soft and melodious; a smile frequently played over his features in conversation; his clothing was the coarse, plain manufacture of the family; but everything about him denoted that kind of comfort which was congenial to his habits and feelings, and evinced a happy old age. His room was part of a range of log cabins, kept in order by his affectionate daughter and grand-daughters, and every member of the household appeared to delight in administering to the comforts of "grandfather Boone," as he was familiarly called.

When age had enfeebled his once athletic frame, he would make an excursion, twice a year, to some remote hunting-ground, employing a companion, whom he bound by a written contract to take care of him; and should he die in the wilderness, to bring his body to the cemetery which he had selected as a final resting-place.

Boone was a fair specimen of the better class of western pioneers; honest, kind-hearted and liberal—in short, one of nature's noblemen. He abhorred a mean action, and delighted in honesty and truth. While he acknowledged that he used guile with the Indians, he excused it as necessary to counteract their duplicity,

but despised in them this trait of character. He never delighted in shedding human blood, even of his enemies in war, and avoided it whenever he could. His most remarkable quality was an enduring and invincible fortitude.

HUNTING AMONG THE EARLY PIONEERS.

HUNTING was an important part of the employment of the first settlers of the West. For some years the woods supplied them with the greater part of their subsistence, and with regard to some families, at certain times, the whole of it; for it was no uncommon thing for families to live for months without a mouthful of bread. It frequently happened that there was no breakfast until it was obtained from the woods. Fur and peltry were the people's money. They had nothing else to give in exchange for rifles, salt and iron on the other side of the mountains.

The fall and early part of the year was the season for hunting the deer, and the whole of the winter, including part of the spring, for bears and fur-skinned animals. It was a customary saying, that fur was good during every month in the name of which the letter R occurs. As soon as the leaves were pretty well down, and the weather became rainy, accompanied with light snows, the settlers, after acting the part of husbandmen, so far as the state of warfare permitted them so to do, soon began to feel that they were hunters. They became uneasy at home. Everything about them grew disagreeable. The house was too warm; the feather-bed too soft; and even the good wife was not thought, for the time being, a suitable companion. The mind of the hunter was wholly occupied with the camp and the chase.

They would often be seen to get up early in the morning at this season, walk out hastily, and look anxiously to the woods, and snuff the autumnal winds with the highest rapture; then return into the house, and cast a quick and attentive look at the rifle, which was always suspended to a joist by a couple of buckhorns, or little forks. His hunting-dog, understanding the intentions of his master, would wag his tail, and by every blandishment in his power express his readiness to accompany him to the woods. A day was soon appointed for the march of the little cavalcade to the camp. Two or three horses, furnished with pack-saddles, were loaded with flour, Indian-meal, blankets, and everything else requisite for the use of the hunter.

A hunting-camp, or what is called a half-faced cabin, was of the following form: the back part of it was sometimes a large log; at the distance of eight or ten feet from this, two stakes were set in the ground, a few inches apart; and at the distance of eight or ten feet from these two more to receive the ends of the poles for the

sides of the camp. The whole slope of the roof was from the front to the back; the covering was made of slabs, skins or blankets; or, if in the spring of the year, the bark of hickory or ash trees. The front was left entirely open; the fire was built directly before this opening; the cracks between the logs were filled with moss; dry leaves served for a bed; and the whole was finished in a few hours. A little more pains would have made the hunting-camp a complete defense against the Indians; but careless in that respect, the hunters were often surprised and killed in their camps. The site for the camp was selected with all the sagacity of the backwoodsman, so as to have it sheltered by the surrounding hills from every wind, but more especially from those of the north and west.

Hunting was not a mere ramble in pursuit of game, in which there was nothing of skill and calculation; on the contrary, when the hunter set out in the morning, he was informed by the weather in what situation he might reasonably expect to meet with game; whether on the bottoms, sides or tops of the hills. In stormy weather, the deer always seek the most sheltered places, and the leeward sides of the hills. In rainy weather, in which there is not much wind, they keep in the open woods, on the highest ground. In every situation, it was requisite for the hunter to ascertain the course of the wind, so as to get leeward of the game. This he effected by putting his finger in his mouth, and holding it there until it became warm, and then raising it above his head, the side which first becomes cold shows which way the wind blows.

As it was requisite for the hunter too to know the cardinal points, he had only to observe the trees to ascertain them. The bark of an aged tree is thicker and much rougher on the north than on the south side. The same thing may be said of the moss on the trees.

The whole business of the hunter consists of a series of intrigues. From morning until night he was on the alert to gain the *wind* of his game, and approach them without being discovered. If he succeeded in killing a deer, he skinned it, and hung it up out of the reach of the wolves, and immediately resumed the chase until the close of the evening, when he bent his way to his camp, kindled up his fire, and together with his fellow-hunter cooked supper. The supper finished, the adventures of the day furnished the tales for the evening. The spike-buck, the two and three-pronged buck, the doe and barren-doe, figured through their anecdotes with great advantage. It should seem that after hunting awhile on the same ground, the hunters became acquainted with nearly all the gangs of deer within their range, so as to know each flock of them when they saw them. Often some old buck, by means of his superior sagacity and watchfulness, saved his little gang from the hunter's skill, by giving timely notice of his approach. The cunning of the hunter and that of the old buck were staked against each other, and it frequently happened, at the

conclusion of the season, the old fellow was left the free, uninjured tenant of the forest; but if his rival succeeded in bringing him down, the victory was followed by no small amount of boasting on the part of the conqueror.

When the weather was not suitable for hunting, the skins and carcasses of the game were brought in and disposed of. Many of the hunters rested from their labors on the Sabbath day; some from motives of piety; others said that when they hunted on Sunday, they were sure to have bad luck the rest of the week.

ADVENTURES OF KENTON.

SIMON KENTON, one of the most noted pioneers of the West, was born in Virginia in 1755. He was of humble parentage, and of mixed Scotch and Irish origin. In the spring of 1771, three years before Dunmore's war, when he was just sixteen years of age, he had a serious quarrel with a young man, a neighbor, by the name of Veach. Simon became desperately enamored with a young lady, who soon after married young Veach. Stung to frenzy by this disappointment, and imagining himself exquisitely injured, he, in the heat of passion, attended the wedding uninvited. As soon as he entered the room, he went forward and intruded himself between the groom and his bride. The result was, that young Veach, as soon as his back was turned, knocked him down, gave him a severe beating, and he was expelled from the house with black eyes and sore bones.

A few days after he met Veach alone, and anxious to repair his wounded honor, had a pitched battle with him. Victory for some time hung on a doubtful balance. Simon at length threw his antagonist to the ground, and as quick as thought drawing his queue of long hair around a small sapling, kicked him in his breast and stomach until all resistance ceased. Veach attempted to rise, but immediately sunk and began to vomit blood. As Simon had not intended to kill him, he now raised him up and spoke kindly to him, but he made no answer, and sunk to the ground apparently lifeless. Erroneously supposing he had murdered him, he was overcome with the most poignant and awful sensations, and immediately fled to the woods. Lying concealed by day and traveling by night, he passed over the Alleghanies, until he arrived, nearly starved, at a settlement on Cheat River, where he changed his name to Simon Butler. Soon after he went to Fort Pitt. Until Dunmore's war broke out, he employed his time mainly in hunting. Kenton described this as the most happy period of his life. He was in fine health, found plenty of game and fish, and free from the cares of an ambitious world and the vexations of domestic life, he passed his time in that happy state of ease, indolence, and independence, which is the glory of the hunter of the forest.

One cold evening in March, after a hard day's hunt, Kenton and his two companions were reposing upon bear-skin pallets before a cheerful camp-fire, in the Kanawha region, when suddenly the sharp crack of an Indian rifle laid one of their number a lifeless corpse. They were surrounded by a party of lurking Indians. Kenton and his surviving companion sprang to their feet and instantly fled, with only their lives and their shirts. Thus exposed, in winter weather, in the wilderness, they were compelled to wander through briers, over rough stones and frozen ground, without fire and without food for six days, until at last they fell in with a party of hunters descending the Ohio, and obtained relief. Their legs and bodies had become so lacerated and torn that they were more than two days in traveling the last two miles.

During Dunmore's war Kenton was employed as a spy. In the spring of 1775 he descended the Ohio to explore the famous "cane lands" of Kentucky. He and his companion, Williams, landed at the mouth of Limestone, on the site of Maysville, made a camp a few miles inland, and finished a small clearing, where they planted some corn—the first planted north of the Kentucky River. Here, tending their corn with their tomahawks, they remained the undisputed masters of all they could see, until they had the pleasure of eating roasting-ears.

In one of his solitary hunting excursions at this time, Kenton, disguised as an Indian, encountered upon the waters of Elkhorn, Michael Stoner, a hunter from North Carolina, also in Indian guise. A silent contest of Indian strategy for mutual destruction commenced, but not a word was spoken. Each believing his antagonist an Indian, sought by all the arts of Indian warfare, to protect himself and draw the enemy's fire. After mutual efforts and maneuvers ineffectually to draw each other from his shelter, or to steal his fire, Stoner suspecting that his antagonist was *not* an Indian, from his covert, exclaimed, "For God's sake, if you are a white man, speak!" The spell was broken, and they became companions in the solitary wilderness. Stoner conducted and introduced Kenton to the new settlements of Boonesborough and Harrodsburg. He had before supposed that he and Williams were the first settlers of Kentucky.

He returned a short time after to his camp and clearing. But the Indians had been there and plundered it. Hard by he found the evidences of a fire, with human bones near it, which proclaimed too sadly the fate of Williams, the first victim in Kentucky of the war.

Kenton returned to Harrodsburg, and served the different stations in the capacity of a spy and ranger, to detect the approach of the Indians. He became highly distinguished for his courage, skill, and stratagem against the wary savage. He had then just arrived at manhood, and was a noble specimen of the hardy, active backwoodsman hunter. He was over six feet in stature, erect, graceful, and of uncommon strength, endurance, and agility. His

complexion and hair were light, and his soft, grayish blue eye was lighted up by a bewitching fascinating smile. He was frank, generous, and confiding to a fault, and was more interested in doing a kindness to others than in serving himself. When enraged, his glance was withering. To give a full account of his adventures, would fill a volume. A few anecdotes must answer.

Early one morning in the summer of 1778, Kenton, with two companions, was just leaving the fort at Boonesborough on a hunting excursion, when two men who had gone into a field to drive in some horses, were fired upon by five Indians. They fled, and when within seventy yards of the fort, an Indian overtook, killed one of them by a blow from his tomahawk, and was commencing to scalp him when Kenton shot him down. He and his companions then drove the remainder into the forest. In the meantime, Daniel Boone, with ten men, came out to their assistance. As they were advancing, Kenton discovered and shot another Indian, just as he was in the act of firing. By the time Boone had come up, they heard a rush of footsteps upon their left, and discovered that a number of Indians had got between them and the gate. Their peril was extreme. As their only salvation, Boone gave the desperate order to charge through the Indian column; upon which they first discharged their rifles, and then clubbing them, dashed down all who stood in their way. The attempt was successful; but Boone would have lost his life had it not been for Kenton. An Indian bullet broke the leg of Boone, and he fell. An Indian sprang forward, uplifted his tomahawk for the fatal blow, when Kenton shot him through the body, and seizing Boone from the ground, carried him safe into the fort. Of the fourteen men engaged in this affray seven were wounded, but none mortally. Boone after he had got in sent for Kenton, and said: "Well, Simon, you have behaved like a man to-day!—indeed you are a fine fellow!" This simple eulogium touched the heart of Kenton.

Boonesborough was twice again besieged by the Indians ere the close of the summer, during which the garrison was reduced to great extremities for want of food, and would have perished but for his skill and fearless daring. In the dead of night, at the peril of his life, Kenton was accustomed to steal through the camp of the enemy, and plunge into the forest far beyond in search of deer and elk. In June, 1778, he was the first volunteer from the Kentucky stations in Clarke's hazardous expedition against Illinois. He was the first man that entered Fort Gage, and the one who surprised Governor Rocheblave in his bed and compelled him to surrender the garrison.

The most marked incidents in his history are the circumstances of his captivity among the Indians. They are briefly these. In September, 1778, Kenton, Montgomery, and Clarke left the stations in Kentucky to obtain horses from the Indians. They crossed the Ohio, and proceeded cautiously to the Indian village on the

site of Oldtown, near the site of Chilicothe. They caught seven horses, and rapidly retreated to the Ohio; but the wind blowing almost a hurricane made the river so rough that they could not induce their horses to take the water. The next day they were come up with by the Indians in pursuit. The whites happened at the moment to be separated. Kenton, judging the boldest course to be the safest, very deliberately took aim at the foremost Indian. His gun flashed in the pan. He then retreated. The Indians pursued on horseback. In his retreat he passed through a piece of land where a storm had torn up a great part of the timber. The fallen trees afforded him some advantage of the Indians in the race, as they were on horseback and he on foot. The Indian force divided, some rode on one side of the fallen timber, and some on the other. Just as he emerged from the fallen timber, at the foot of the hill, one of the Indians met him on horseback, and boldly rode up to him, jumped off his horse and rushed at him with his tomahawk. Kenton, concluding a gun-barrel as good a weapon of defense as a tomahawk, drew back his gun to strike the Indian before him. At that instant another Indian, who, unperceived by Kenton, had slipped up behind him, clasped him in his arms. Being now overpowered by numbers, further resistance was useless—he surrendered. While the Indians were binding Kenton with tugs, Montgomery came in view and fired at the Indians, but missed his mark. Montgomery fled on foot. Some of the Indians pursued, shot at, and missed him; a second fire was made and Montgomery fell. The Indians soon returned to Kenton, shaking at him Montgomery's bloody scalp. Clarke, Kenton's other companion, escaped.

The horrors of his captivity during nine months among the Indians may be briefly enumerated, but they cannot be described. The sufferings of his body may be recounted, but the anguish of his mind, the internal torments of the spirit, none but himself could know.

The first regular torture was the hellish one of Mazeppa. He was securely bound, hand and foot, upon the back of an unbroken horse, which plunged furiously through the forest, through thickets, briers, and brush, vainly endeavoring to extricate himself from the back of his unwelcome rider until completely exhausted. By this time Kenton had been bruised, lacerated, scratched, and mangled until life itself was nearly extinct, while his sufferings had afforded the most unbounded ecstasies of mirth to his savage captors. This, however, was only a prelude to subsequent sufferings.

Upon the route to the Indian towns, for the greater security of their prisoner, the savages bound him securely with his body extended upon the ground, and each foot and hand tied to a stake or sapling; and to preclude the possibility of escape, a young sapling was laid across his breast, having its extremities well secured to the ground, while a rope secured his neck to another sapling. In this condition, nearly naked, and exposed to swarms of gnats and

mosquitoes, he was compelled to spend the tedious night upon the cold ground, exposed to the chilling dews of autumn.

On the third day at noon, he was within one mile of old Chilicotte, the present site of Frankfort, where he was detained in confinement until the next day. Toward evening, curiosity had brought hundreds of all sexes and conditions to view the great Kentuckian. Their satisfaction at his wretched condition was evinced by numerous grunts, kicks, blows, and stripes inflicted amid applauding yells, dancing, and every demonstration of savage indignation.

This, however, was only a prelude to a more energetic mode of torture the next day, in which the whole village was to be partakers. The torture of a prisoner is a school for the young warrior to stir up his hatred for their white enemies, and keep alive the fire of revenge, while it affords sport and mirth to gratify the vindictive rage of bereaved mothers and relatives by participating in the infliction of the agonies which he is compelled to suffer.

Running the gantlet was the torture of the next day, when nearly three hundred Indians of both sexes and all ages were assembled for the savage festival.

The ceremony commenced. Kenton, nearly naked and freed from his bonds, was produced as the victim of the ceremony. The Indians were ranged in two parallel lines about six feet apart, all armed with sticks, hickory rods, whips, and other means of inflicting pain. Between these lines, for more than half a mile to the village, the wretched prisoner was doomed to run for his life, exposed to such injury as his tormentors could inflict as he passed. If he succeeded in reaching the council-house alive it would prove an asylum to him for the present. At a given signal Kenton started in the perilous race. Exerting his utmost strength and activity, he passed swiftly along the line, receiving numerous blows, stripes, buffets, and wounds, until he approached the town, near which he saw an Indian leisurely awaiting his advance with a drawn knife in his hand, intent upon his death.

To avoid him he instantly broke through the line, and made his rapid way toward the council-house, pursued by the promiscuous crowd whooping and yelling like infernal furies at his heels. Entering the town in advance of his pursuers, just as he had supposed the council-house within his reach, an Indian was perceived leisurely approaching him, with his blanket wrapped around him; but suddenly he threw off his blanket and sprang upon Kenton as he advanced. Exhausted with fatigue and wounds, he was thrown to the ground, and in a moment he was beset with crowds, eager to strip him, and to inflict upon him each the kick or blow which had been avoided by breaking through the line. Here, beaten, kicked, and scourged until he was nearly lifeless, he was left to die.

A few hours afterward, having partially revived, he was supplied with food and water, and was suffered to recuperate for a few

days, until he was able to attend at the council-house and receive the announcement of his final doom.

After a violent discussion, the council by a large majority, determined that he should be made a public sacrifice to the vengeance of the nation; and the decision was announced by a burst of savage joy, with yells and shouts which made the welkin ring. The place of execution was Wappatomica, the present site of Zanesfield, in Logan county, Ohio. On his route to this place, he was taken through Pickaway and Mackacheck, on the Scioto, where he was again compelled to undergo the torture of the gantlet, and was scourged through the line. At this place, smarting under his wounds and bruises, he was detained several days, in order that he might recuperate preparatory to his march to Wappatomica. At length, being carelessly guarded, he determined, if possible, to make his escape from the impending doom. In this attempt he had proceeded two miles from the place of confinement, when he was met by two Indians on horseback, who in a brutal manner drove him back to the village. The last ray of hope had now expired, and, loathing a life of continual suffering, he in despair resigned himself to his fate.

His late attempt to escape had brought upon him a repetition of savage torture, which had well-nigh closed his sufferings forever, and he verily believed himself a "God-forsaken wretch." Taken to a neighboring creek, he was thrown in, and dragged through mud and water, and submerged repeatedly, until life was nearly extinct, when he was again left in a dying state; but the constitutional vigor within him revived, and a few days afterward he was taken to Wappatomica for execution. At Wappatomica he first saw, at a British trading-post, his old friend Simon Girty, who had become a renegade, in all the glory of his Indian life, surrounded by swarms of Indians, who had come to view the doomed prisoner and to witness his torture. Yet Girty suspected not the presence of his old acquaintance at Fort Pitt. Although well acquainted with Kenton only a few years before, his present mangled condition and his blackened face left no traces of recognition in Girty's mind. Looking upon him as a doomed victim, beyond the reach of pity or hope, he could view him only as the victim of sacrifice; but so soon as Kenton succeeded in making himself known to Girty, the hard heart of the latter at once relented; and sympathizing with his miserable condition and still more horrid doom, he resolved to make an effort for his release. His whole personal influence, and his eloquence, no less than his intrigue, were put in requisition for the safety of his fallen friend. He portrayed, in strong language, the policy of preserving the life of the prisoner, and the advantage which might accrue to the Indians from the possession of one so intimately acquainted with all the white settlements. For a time Girty's eloquence prevailed, and a respite was granted; but suspicions arose, and he was again summoned before the council. The death of Kenton was again decreed. Again the influence of

Girty prevailed, and through finesse he accomplished a further respite, together with a removal of the prisoner to Sandusky.

Here again the council decreed his death, and again he was compelled to submit to the terrors of the gantlet, preliminary to his execution. Still Girty did not relax his efforts. Despairing of his own influence with the council, he secured the aid and influence of Logan, "the friend of white men." Logan interceded with Captain Drouillard, a British officer, and procured through him the offer of a liberal ransom to the vindictive savages for the life of the prisoner. Captain Drouillard met the council, and urged the great advantage such a prisoner would be to the commandant at Detroit, in procuring from him such information as would greatly facilitate his future operations against the rebel colonies. At the same time, appealing to their avarice, he suggested that the ransom would be proportionate to the value of the prisoner.

Drouillard guaranteed the ransom of one hundred dollars for his delivery, and Kenton was given to him in charge for the commandant at Detroit. As soon as his mind was out of suspense, his robust constitution and iron frame recovered from the severe treatment which they had undergone. Kenton passed the winter and spring at Detroit. Among the prisoners were Captain Nathan Bullit and Jesse Coffey. They had the liberty of the town, and could stroll about at pleasure.

With these two men, Kenton began to meditate an escape. They had frequent conferences on the subject; but the enterprise was almost too appalling for even these hardy, enterprising pioneers. If they should make this bold push, they would have to travel nearly four hundred miles through the Indian country, where they would be exposed to death by starvation, by flood, by the tomahawk, or to capture, almost at every step. But the longer they brooded over the enterprise, the stronger their resolutions grew to make the attempt. They could make no movement to procure arms, ammunition or provision without exciting suspicion; and should they be once suspected, they would be immediately confined. In this situation, they could only brood over their wished flight in secret and in silence. Kenton was a fine looking man, with a dignified and manly deportment, and a soft, pleasing voice, and was everywhere he went a favorite among the ladies. A Mrs. Harvey, the wife of an Indian trader, had treated him with particular respect ever since he came to Detroit, and he concluded if he could engage this lady as a confidant, by her assistance and countenance, ways and means could be prepared to aid them in their meditated flight. Kenton approached Mrs. Harvey on this delicate and interesting subject with as much trepidation and coyness as ever maiden was approached in a love affair. The great difficulty with Kenton was to get the subject opened with Mrs. Harvey. If she should reject his suit, and betray his intentions, all his fond hopes would be at once blasted. However at length

he concluded to trust this lady with the scheme of his meditated flight, and the part he wished her to act for him. He watched an opportunity to have a private interview with Mrs. Harvey. An opportunity soon offered, and he, without disguise or hesitation, in full confidence informed her of his intention, and requested her aid and secrecy. She appeared at first astonished at his proposal, and observed that it was not in her power to afford him any aid. Kenton told her he did not expect or wish her to be at any expense on their account; that they had a little money for which they had labored; and that they wished her to be their agent to purchase such articles as would be necessary for them in their flight; that if they should go to purchasing, it would create suspicion; but that she could aid them in this way without creating any suspicion; and if she would be their friend, they had no doubt they could effect their escape. This appeal from such a fine-looking man as Kenton was irresistible. There was something pleasing in being the selected confidant of such a man; and the lady, though a little coy at first, surrendered at discretion. After a few chit chats, she entered into the views of Kenton with as much earnestness and enthusiasm as if she had been his sister. She began to collect and conceal such articles as might be necessary in the journey—powder, lead, moccasins and dried beef were procured in small quantities, and concealed in a hollow tree some distance out of town. Guns were still wanting, and it would not do for a lady to trade in them. Mr. Harvey had an excellent fowling-piece, if nothing better should offer, that, she said, should be at their service. They had now everything that they expected to take with them in their flight ready, except guns.

At length the third day of June, 1779, came, and a large concourse of Indians were in the town engaged in a drunken frolic; they had stacked their guns near Mrs. Harvey's house. As soon as it was dark, Mrs. Harvey went quietly to where the Indians' guns were stacked, and selected the three best looking rifles, carried them into her garden, and concealed them in a patch of peas. She next went privately to Kenton's lodging, and conveyed to him the intelligence where she had hid the Indians' guns. She told him she would place a ladder at the back of the garden (it was picketed), and that he could come in and get the guns. No time was to be lost. Kenton conveyed the good news he had from Mrs. Harvey to his companions, who received the tidings in ecstasies of joy; they felt as if they were already at home. It was a dark night; Kenton, Bullit and Coffey gathered up their little all and pushed to Mrs. Harvey's garden. There they found the ladder; Kenton mounted over, drew the ladder over after him, went to the pea-patch, found Mrs. Harvey sitting by the guns; she handed him the rifles, gave a friendly shake of the hand, and bid a safe journey to his friends and countrymen. She appeared to Kenton and his comrades as an angel. When a woman engages to do an action, she will risk limb, life or character to serve th se

whom she respects or wishes to befriend. How differently the same action will be viewed by different persons! By Kenton and his friends her conduct was viewed as the benevolent action of a good angel; while if the part she played in behalf of Kenton and his companions had been known to the commander at Detroit, she would have been looked upon as a traitress, who merited the scorn and contempt of all honest citizens. This night was the last time that Kenton ever saw or heard of her.

A few days before Kenton left Detroit, he had a conversation with an Indian trader, a Scotchman, by the name of M'Kenzie, who was well acquainted with the geography of the country, and range of the Indians, between the lakes and the Ohio and Mississippi. The Scotchman slyly observed to Kenton, that if he was going to Kentucky, and did not wish to meet with the Indians, he would steer more west than the common route, and get into Wabash prairies as soon as possible. Kenton did not know what to think of the remarks of the Scotchman. He began to think that perhaps Mrs. Harvey had divulged his secret to this man, and that he was pumping Kenton; or probably he wished to aid him, and this was offering him friendly advice. As no more was said, he did not pretend to notice what the Scotchman said, but treasured the remarks in his mind.

As soon as Kenton and his companions took their leave of their friend and benefactress, Mrs. Harvey, they made their way to the little store in the hollow tree, bundled up and pushed for the wood, and steered a more westerly, than the direct course to Kentucky. They had no doubt but every effort would be made to retake them; they were, consequently, very circumspect and cautious in leaving as few traces, by which they might be discovered, as possible. They went on slowly, traveling mostly in the night, steering their course by the cluster, called the seven stars, until they reached the prairie country, on the Wabash. In this time, though they had been very sparing of their stock of provisions, it was now exhausted, and their lives depended on their guns. In these large prairies there was but little game, and they were days without provision. They, like the Hebrews of old, began to wish themselves again with the flesh-pots at Detroit. One day as they were passing down the Wabash, they were just emerging out of a thicket of brushwood, when an Indian encampment suddenly presented itself to their view, and not more than one hundred and fifty or two hundred yards from them. No ghastly visit could have set their hair on end sooner. They immediately dodged back into the thicket, and concealed themselves until night. They were now almost exhausted with fatigue and hunger—they could only travel a few miles in a day. They lay still in the thicket, consulting with each other the most proper measures to pursue in this their precarious situation. Bullit and Coffey thought the best plan to save their lives, would be voluntarily to surrender themselves to the Indians. The Indians who had taken them had not treated

them so roughly as Kenton had been handled. Kenton wished to lay still until night, and make as little sign as possible, and as soon as it was dark they would push ahead, and trust the event to Providence. After considerable debate, Kenton's plan was adopted. The next morning, Kenton shot a deer. They made a fire and went to cooking; and never did food taste more delicious. They then pursued their toilsome march, and arrived, without farther adventure, at the Falls of the Ohio (now Louisville) on the thirty-third day of their escape.

Until the close of the war, he continued an active partisan. From 1784 to 1792, he was in many severe encounters with the savages, and on one occasion with Tecumseh, then a young chief rapidly rising into notice. Kenton was with Wayne, in the capacity of Major, in the early part of his campaign.

When the war was over, he settled on his farm, near Maysville, where he possessed extensive lands, and was considered one of the wealthiest men in Kentucky. His house was the abode of hospitality, and he began to enjoy the comforts of a green old age in peace and competence, but a dark cloud was lowering upon his prospects. Ignorant of the technicalities of the law, he had failed to render his title secure, and, like Boone and Clarke, he was robbed in successive law-suits, of one piece of land after another, until he found, in his declining age, himself and family reduced to poverty and want.

About the year 1802, he settled in Urbana, Ohio, where he remained some years, and was elected brigadier-general of militia. In the war of 1812, he joined the army of Gen. Harrison, and was at the battle of the Moravian town, where he displayed his usual intrepidity. About the year 1820, he moved to the head of Mad River. A few years after, through the exertions of Judge Burnet and General Vance, a pension of twenty dollars per month was granted to him, which secured his declining age from want. He died in 1836, at which time he had been a member of the Methodist church over a quarter of a century. The frosts of more than eighty winters had fallen on his head without entirely whitening his locks, notwithstanding he had passed through more dangers, privations, perils and hair-breadth escapes than any man living or dead.

INCIDENTS OF THE FUR TRADE.

THE French were the pioneers in the Fur Trade. It was in fact the great source which gave early sustenance and vitality to their Canadian provinces, and of no less importance to them than the precious metals of the South to the Spanish colonies. At an early period, long before the English had crossed the Alleghanies, their colonies, missionary stations, trading-posts and forts were located in

the choicest points of the West. The enormous profits of this trade, the ease with which they conformed to the Indian habits, led them to extend the traffic far into the interior and over an immense extent of territory. This trade was carried on by a hardy race, the "*Coueurs des bois*," who joined with the Indians in hunting parties, and often passing from one to two years in these expeditions. These men were a sort of peddlers, who received credit from the merchants for their stock in trade and supplied them in return with their furs. Eventually military posts were established, and a body of more respectable men introduced order in the traffic, repressed the excesses of the *coueurs des bois*, who were extremely licentious and dissipated, and extended the trade as far north as Saskatchewan River, in lat. 52 deg. north, and long. 102 deg. west. The French first visited Red River, and built *Fort de la Reine*, near the mouth of the Assiniboine, which became a place of great resort for traders.

While the French were thus spreading themselves over the western country, the English were not idle. In the year 1669, the Hudson's Bay Company was formed under the auspices of a charter from Charles II, which gave them the sole right to trade in Hudson's Bay and the territories on the coast. Previous to this, however, the French had established Post Nelson and New Albany on Hudson's Bay, and in 1686, they took all the English posts, from Fort Rupert to Albany, except that of Nelson. By the treaty of 1763, the French surrendered to the English, Canada and their western possessions, and the trade became almost exclusively confined to the Hudson's Bay Company, whose agents were distributed throughout the western country. Although rid of their French rivals, they were not long permitted to enjoy their monopoly. In 1796 private adventurers began to extend their traffic along the shores of the lake and to come into collision with them. Some of the most wealthy of these individuals united in 1783, and established the Northwest Company, which became one of the most active and enterprising associations that ever existed—almost rivaling the famous East India Company. They erected new posts along the lakes and occupied the old French trading stations. Their agents were posted at Montreal, Detroit, Mackinaw, Sault Saint Marie, and at Fort Charlotte, at the Grand Portage near Lake Superior; also at Sandy Lake, Leech Lake and other points in Minnesota.

Their principal depot in the northwest was at Fort William, situated on Kamanatekwoye River, in lat. 48 deg. 23½ min. north. This fort was on so large a scale as to accommodate forty partners, with their clerks and families. About these posts were many half-breeds, whose numbers were constantly increasing by the intermarriages of the French traders with the Indian women. Their goods consisting principally of blankets, cutlery, printed calicoes, ribbons, glass beads, and other trinkets, were forwarded to the posts from Montreal in packages of about ninety pounds each, and exchanged

in winter for furs, which in the summer were conveyed to Montreal in canoes carrying each about sixty-five packages and ten men. The Mackinaw Company, also English merchants, had their headquarters at Mackinaw, while their trading posts were over a thousand miles distant, on the head waters of the Mississippi.

Between the Northwest and the Hudson's Bay Company a powerful rivalry existed. The boundaries of the latter not being established desperate collisions often took place, and the posts of each were frequently attacked. When Lieutenant Pike ascended the Upper Mississippi in 1805, he found the fur trade in the exclusive possession of the Northwest Company, which was composed wholly of foreigners. Although the lake posts were surrendered to our government in 1796, American authority was not felt in that quarter until after the war of 1812, owing to the influence the English exercised over the Indians. It was from fear of American rivalry that the British fur traders instigated the Indians to border wars against the early settlements. In 1816, Congress passed a law excluding foreigners from the Indian trade. For the encouragement of the fur trade and the protection of our frontier, military posts were established at St. Peters and Prairie du Chien in 1819, and St. Mary's Falls, at the outlet of Lake Superior, in 1822.

In the meantime the Northwest Company transferred all their trading-posts south of the boundary line to an American Fur Company, organized by John Jacob Astor. They however carried on an active trade along the lines, and maintained a spirited opposition to the Hudson's Bay Company.

The Hudson's Bay Company in 1811 made a grant to Lord Selkirk, who was one of the principal partners, of a tract of land about as large as Georgia, including Red River up to Red Fork. Having extinguished the Indian title, he engaged with great enthusiasm in colonizing this El Dorado of his. In 1812 he planted a colony on Red River, which he settled with English, Highland Scotch, Swiss, and soldiers, and emigrants from other parts of Europe. In consequence of the hardships endured and the hostilities between the Hudson's Bay and the Northwest Companies, by which some of the colonists lost their lives, the settlement in 1815 was broken up. In an attempt to refound it the next year, they were again assaulted and Semple, their governor, killed.

Lord Selkirk, however, persevered in maintaining the rights of the Hudson's Bay Company. With a detachment of soldiers he marched through the country, and took possession of the trading-posts of the rival company; and finally, in 1821, put an end to hostilities by consolidating the two companies into one. From that period his colony began to thrive. In 1822, it being discovered that Pembina, the southern settlement on Red River, in the Upper Mississippi country, was within the boundary line of the United States, the post of the Company was removed to the other settlement about sixty miles distant on the British side of the line, in a region of almost Siberian severity.

The fur traders, stationed at a distance from the borders of civilization, generally select their wives from among the Indians, which they are accustomed to obtain by purchase from their parents. Hence, there has arisen around the trading-posts large numbers of half-breeds. Of these the males who are employed in the business are nicknamed *Bois Brule*, *i. e.* Burnt Wood, from their dark complexion. Their dress is picturesque, being a combination of the European and Indian costume. Their countenance is full of expression, and when excited to anger, more demoniac, if possible, than even the Indian. They are expert in everything that appertains to a forest life; active, enduring, and skillful in the chase or in managing the bark canoe through perilous passages. Accustomed from their early infancy to the arts of the fur trade, one of the worst schools for morals, they are unsurpassed in cunning and artifice by even the shrewdest specimen of the Sam Slick genus.

The *voyageurs* in carrying their packs of skins use bark canoes, or the *canos du nord*. This kind of canoe is generally constructed of ribs of cedar bent to the required form, the ends being secured to a band that forms the superior edge of the vessel and acts as a gunwale. Over these ribs the birch bark is laid in as large pieces as possible, usually so that there shall be but two longitudinal seams and two or three transverse. Between the bark and the ribs thin splints of cedar are placed to prevent the bark from splitting. All the joints are sewed by long threads made by splitting the roots of a tree, called by the voyageurs *epinette*, and which is probably a spruce. The joints and cracks are made water-tight, by applying hot pitch from the gum of the same tree. In this manner a little vessel is made, capable of carrying three thousand pounds. In dimensions they are generally about thirty feet long, four feet wide in the center, and thirty inches deep. Great care is required in preventing them from touching the shore or a rock, as they would otherwise break; hence they are never brought near a bank. Two men keep the canoe afloat at a distance, while the rest of the crew load and unload her. Every night the canoe is unloaded, raised out of the water, and left on the beach bottom upward. This is also occasionally done when they ship during the day. It affords an opportunity for it to dry, as otherwise the bark would become too heavy by absorbing water.

The many portages on the routes of the fur trader require a boat of this light material, that can be readily carried over land and again launched. As soon as a canoe reaches a portage a scene of bustle and activity takes place. The goods are unloaded and conveyed across, while the canoe is carried over and again launched and loaded without loss of time—a portage of one hundred yards not detaining the voyageurs over twenty minutes. The whole care and attention of the voyageur seems to center in his canoe, which he handles with an astonishing degree of dexterity and caution: indeed the greatest care and skill is required in their management.

The voyageurs compute distances by *pipes*, which are the intervals between the times when they cease to paddle in order to smoke their pipe. As may be imagined, the length of a pipe is varied according to circumstances. When the portage is of much length, they divide it into *pauses*, or distances traveled without stopping to rest. These average about a third of a mile.

The fur trade was formerly very lucrative, and immense fortunes were realized in a short time by those engaged in it. It was this trade that laid the foundation of the fortune of Astor. Major Long's guide, in 1823, informed him that, eighteen years before, he purchased of an Indian one hundred and twenty beaver skins for two blankets, two gallons of rum, and a pocket mirror. The beaver sold in Montreal for over four hundred dollars. This was considered fair dealing with the Indians at the time. Now competition has reduced it nearer to a par with ordinary commercial transactions.

The resident trader not only endures a good deal of hardship and suffering from his position in the distant wilderness, but often is in great personal danger from the treacherous race with whom he deals. In resisting the attacks of the Indians, some of the traders generally exhibit great courage and presence of mind, of which the subjoined anecdote is illustrative:

Some Indians entered the store of a trader at St. Peters to assassinate him. Aware of the plot he seized a coal of fire as they came in, placed himself before a keg of gunpowder, and addressed them as follows: "You come here to kill me. You know that I am a brave man and not a coward, and that I will not die like a dog. Go back to your lodges and bid adieu to your wives and children, for if I die, you must all die with me. Approach not another foot toward me. Leave instantly, or I will apply a coal to this keg of powder and blow you all to atoms." They decamped precipitately and molested him no farther.

The lives of the fur traders, in early times, were not of constant privations. They had their seasons of relaxation and their times of conviviality. When assembled at their periodical meetings at Mackinaw or Fort William, on Lake Superior, they were provided with the choicest dainties, and the hours passed away with a continual round of feasting and hilarity. The wealthy partners in Montreal lived like nabobs. They were the aristocrats of Canada. Their glory vanished by the failure of the Northwest Company.

The wealthy bachelor fur traders were considered high game by the fashionable belles of the Canadian cities. And many were there of this class who, after having spent a generation in the backwoods and raised up families of half-breed children, that in their old age found themselves united to young and beautiful ladies of Montreal and Quebec.

Two different kinds of lodges are used by the Indians of the Northwest, viz: the conical buffalo skin lodge and the oblong birch bark lodge. Those who reside on the prairies, and who hunt the

buffalo, use the skin lodge, which is formed of several buffalo skins united into one and wound around a number of light poles so as to form a conical tent. Those who live northeast of the buffalo regions construct their lodges of large pieces of birch bark, stretched upon the young branches of trees bent so as to form an oblong lodge. These are covered with bark, which, when they travel, is rolled up and carried by the women. In the engraving the dress, appearance, and attitude of the Indians and half-breeds are given. It also exhibits two Indian dogs carrying burdens in the manner of pack-horses. This animal generally consumes daily from six to ten pounds of fresh meat. They are almost indispensable to the fur traders, who have initiated the Indians in their use. For winter traveling in a country so covered with snow, the dog is the most convenient beast of burden. Six dogs will easily draw a load of one thousand pounds. In traveling on the snow with dog trains, it is usual for a man to walk ahead with snow shoes to trample down the snow in which they otherwise would sink. After death the dog forms one of the best articles of food for the Indian. In the narrative of Long's expedition, the writer describes the meat as remarkably fat, sweet, and palatable, and says, that "could we have divested ourselves of the prejudices of education, we should doubtless have unhesitatingly acknowledged it to be among the best meat we had ever eaten.

The most successful trading stations are now beyond the Rocky Mountains. The fur companies from the Pacific, east to the Rocky Mountains, are now occupied—exclusive of private combinations and individual trappers and traders—by the Russians on the northwest from Bhering's Straits to Queen Charlotte's Island, in north latitude fifty degrees; and by the Hudson's Bay Company thence south of the Columbia River, while American companies take the remainder of the region down to California. Indeed, the mountains and the forests of the Far West, from the Arctic Sea to the Gulf of Mexico, are threaded through every maze by the hunter and trapper.

The prosecution of the fur trade by citizens of the United States is of comparatively recent date. The prominent rendezvous for American fur traders has been St. Louis. Even before the commencement of the present century over \$200,000 worth of furs were collected there annually, St. Louis then forming a part of the Spanish Territory of Louisiana. In 1808, the Missouri Fur Company was organized there, and its hunters were the first who entered Oregon. The operations of that company were suspended by the war of 1812. One of the most noted companies has been that of Gen. Wm. H. Ashley. The spirit, enterprise, and hardihood of Ashley have been the themes of the highest eulogy, and his adventures and exploits would furnish a volume of thrilling interest. He fitted out his first expedition to the western waters in 1823. He first discovered the *South Pass* in the Rocky Mountains, the great highway to Oregon and California, and, in 1824,

extended his explorations and trade to the Great Salt Lake of Utah.

The fur trade must henceforth decline in North America, as the animals are rapidly decreasing before the hunter and the appropriation to the uses of civilization of the forests and rivers which have afforded them protection.

LEWIS WHETZEL, THE INDIAN HUNTER.

AMONG the earliest settlers in the region of Wheeling was a family of the name of Whetzel, the head of whom was of German origin. Although it was the hottest time of the Indian war, the old man was so rash as to build a cabin some distance from the fort, and moved his family into it. Dearly did he pay for his temerity.

His family consisted, beside himself and wife, of four sons—Martin, Lewis, Jacob and John—respectively fifteen, thirteen, eleven and nine years of age. One day during the temporary absence of Martin, the oldest, and John, the youngest of the boys, the Indians made an attack upon the house, killed the old man, and carried off Lewis and Jacob captive. Mrs. Whetzel, in the confusion of the scene, escaped.

In the attack on their house, Lewis received a slight wound from a bullet, which carried away a small piece of the breast-bone. The second night after the capture, the Indians encamped at the Biglick, twenty miles from the river, in what is now Ohio, and upon the waters of McMahon's Creek. The extreme youth of the boys induced the savages to neglect their usual precautions of tying their prisoners at night. After the Indians had fallen asleep, Lewis whispered to his brother to get up, and they would make their way home. They started, and after going a few hundred yards, sat down on a log. "Well," said Lewis, "we can't go home barefooted. You stay here, and I will go back and get a pair of moccasins for each of us." He did so and returned. After sitting a little longer, he said: "Now I will go back and get one of their guns, and we will then start." This was accordingly done. Young as they were, the boys were sufficiently expert with tracking paths in the woods to trace their course home, the moon enabling them, by her occasional glimpses, to find the trail which they had followed from the river. The Indians soon discovered their escape, and were heard by them hard on their heels. When the party in pursuit had almost overtaken them, they stepped aside in the bushes and let them pass, then fell into the rear and traveled on. On the return of their pursuers they did the same. They were then followed by two Indians on horseback, whom they evaded in the same manner. The next day they reached Wheeling.

in safety, crossing the river on a raft of their own making; Lewis by this time being nearly exhausted by his wound.

As the Whetzels grew up to be men—and the frontier boys whenever large enough to handle a rifle considered themselves as such—they took a solemn oath never to make peace with the Indians while they had strength to wield a tomahawk, or sight to draw a bead. They esteemed revenge for the death of their father as the most precious and sacred portion of their inheritance.

Fully did they glut their vengeance. It was estimated that the four brothers, in the course of this long Indian war, took near one hundred scalps. War was the business of their lives. They would prowl through the Indian country singly, suffer all the fatigues of hasty marches in bad weather, or starvation, lying in close concealment watching for a favorable opportunity to inflict death on the devoted victims who were so unfortunate as to come within their grasp. Notwithstanding their numberless exploits, they were no braggadocios. In truth, when they had killed an Indian, they thought no more of it than a butcher would after killing a bullock. It was their trade.

Lewis Whetzel was perhaps the most indefatigable Indian hunter on the frontiers. During the wars, it is said that, disguised as an Indian, he killed in the region of the Upper Ohio alone twenty-seven of the enemy, beside a number more on the Kentucky frontier. His person was in keeping with his character. He was about five feet nine inches in height, very broad shouldered and full breasted. His complexion was dark and swarthy as an Indian's, and his face pitted with the small-pox. His hair, of which he was very careful, reached, when combed out, to the calves of his legs; his eyes were remarkably black, and when excited, which was easily done, they would sparkle with such a vindictive glance as almost to curdle the blood of the beholder. He was a true friend, but a dangerous enemy. In mixed company, he was a man of few words, but with his friends a social and cheerful companion. Such was Lewis Whetzel, of whom we relate but a few anecdotes of his numberless adventures while pursuing his trade of blood.

About the year 1787, a party of Indians having committed some murders a few miles above Wheeling, some twenty men, under Major McMahon, crossed the Ohio, and followed their trail until they came to the Muskingum. The spies in advance then discovered the enemy to be vastly their superior. A council was called, and it was determined most prudent to retreat. Lewis Whetzel, who was present, took no part in the council, but in the meanwhile sat on a log, with his rifle laid across his lap, and his tomahawk in his hand. As the party set off on the retreat, Lewis stirred not from his seat. Major McMahon called to him, and inquired if he was going with them. Lewis answered, "that he was not; that he came out to hunt Indians; they were now found, and he was not going home like a fool with his finger in his mouth. He would take an Indian scalp or lose his own before he went

home." All their arguments were without avail. His stubborn, unyielding disposition was such, that he never submitted himself to the control or advice of others. They were compelled to leave him, a solitary being in the midst of the thick forest, surrounded by vigilant enemies. Notwithstanding that this solitary individual appeared to rush into danger with the fury of a madman, yet in his disposition was displayed the cunning of a fox, as well as the boldness of the lion.

As soon as his friends had left him, he picked up his blanket, shouldered his rifle, and struck off into a different part of the country, in hope that fortune would place in his way some lone Indian. He kept aloof from the large streams, where large parties of the enemy generally camped. He prowled through the woods with a noiseless tread and the keen glance of the eagle that day, and the next until evening, when he discovered a smoke curling up among the bushes. He crept softly to the fire, and found two blankets and a small copper kettle in the camp. He instantly concluded that this was the camp of only two Indians, and that he could kill them both. He concealed himself in the thick brush, but in such a position that he could see the number and motions of the enemy. About sunset one of the Indians came in, made up the fire, and went to cooking his supper. Shortly after the other came in; they ate their supper; after which they began to sing, and amuse themselves by telling comic stories, at which they would burst into a roar of laughter. Singing and telling amusing stories was the common practice of the white and red men when lying in their hunting-camps. These poor fellows, when enjoying themselves in the utmost glee, little dreamed that the grim monster Death, in the shape of Lewis Whetzel, was about stealing a march upon them. Lewis kept a keen watch on their maneuvers.

About nine or ten o'clock at night, one of the Indians wrapped his blanket around him, shouldered his rifle, took a chunk of fire in his hand, and left the camp, doubtless with the intention of going to watch a deer-lick. The fire and smoke would serve to keep off the gnats and mosquitoes. It is a remarkable fact, that deer are not alarmed at seeing fire, from the circumstance of seeing it so frequently in the fall and winter seasons, when the leaves and grass are dry, and the woods on fire. The absence of the Indian was the cause of vexation and disappointment to our hero, whose trap was so happily set, that he considered his game secure. He still indulged the hope that the Indian might return to camp before day. In this he was disappointed. There were birds in the woods who chirped and chattered just before break of day; and, like the cock, gave notice to the woodsman that day would soon appear. Lewis heard the wooded songster begin to chatter, and determined to delay no longer the work of death for the return of the Indian. He walked to the camp with a noiseless step, and found his victim buried in profound sleep, lying upon his side. He drew his butcher-knife, and with all his force, impelled by revenge, he sent

MASSACRE OF THE CHRISTIAN INDIANS

"Of the number thus cruelly murdered by the backwoodsmen of the upper Ohio, between fifty and sixty were women and children—some of them innocent babes."

the blade through his heart. He said the Indian gave a short quiver, and a convulsive motion, and laid still in death's eternal sleep. He then scalped him, and set off for home. He arrived at the Mingo Bottom only one day after his unsuccessful companions.

One more of Lewis Whetzel's tragedies, and we are done. He set off alone (as was frequently his custom) on an Indian hunt. It was late in the fall of the year, when the Indians were generally scattered in small parties on their hunting-grounds. He proceeded somewhere on the waters of the Muskingum River, and found a camp where four Indians had fixed their quarters for a winter hunt. The Indians, unsuspecting of any enemies prowling about them so late in the season, were completely off their guard, keeping neither watch nor sentinels. Whetzel at first hesitated about the propriety of attacking such overwhelming numbers. After some reflection, he concluded to trust to his usual good fortune, and began to meditate upon his plan of attack. He concluded their first sleep would be the fittest time for him to commence the work of death. About midnight, he thought their senses would be the most profoundly wrapped in sleep. He determined to walk to the camp, with his rifle in one hand, and his tomahawk in the other. If any of them should happen to be awake, he could shoot one, and then run off in the darkness of the night, and make his escape; should they be all asleep, he would make the onset with his trusty scalping-knife and tomahawk. Now, reader, imagine that you see him gliding through the darkness, with the silent, noiseless motion of an unearthly demon, seeking mischief, and the keen glance of the fabled Argus, and then you can imagine to your mind Whetzel's silent and stealthy approach upon his sleeping enemies. On he went to the camp, the fire burning dimly, but affording sufficient light to distinguish the forms of his sleeping victims. With calm intrepidity he stood a moment, reflecting on the best plan to make the desperate assault. He set his rifle against a tree, determined to use only his knife and tomahawk; as these would not miss their aim, if properly handled with a well strung arm. What a thrilling, horrible sight! See him leaning forward, with cool self-possession and eager vengeance, as if he had been the minister of death; he stands a moment, then wielding his tomahawk, with the first blow leaves one of them in death's eternal sleep. As quick as lightning, and with tremendous yells, he applies the tomahawk to the second Indian's head, and sent his soul to the land of spirits. As the third was rising, confounded and confused with the unexpected attack, at two blows he fell lifeless to the ground. The fourth darted off, naked as he was, to the woods. Whetzel pursued him some distance, but finally he made his escape.

HEROISM OF THE PIONEER WOMEN.

THE early annals of the western country abound in anecdotes illustrating fortitude under suffering, and heroism in circumstances of peril among the wives and mothers of the early pioneers. Their nerves became strengthened by the trials which they were obliged to undergo, and their minds inured to danger by their constant peril from a savage enemy. Many were the instances in which, when their cabins were attacked by the savages, they displayed a wonderful courage and presence of mind. Had the places of the four thousand Mexicans who, at the battle of Sacramento, were defeated by the Missouri Regiment, of eight hundred and fifty-six men, under Doniphan, been occupied by a tithe of their number of such females, that victory would not have been effected with so small a loss to the conquerors as one killed, one mortally and seven slightly wounded; nor would many of the other battles of that war, which covered our arms "with glory," have been so easily won had the enemy been animated by the spirit and courage of the strong armed and strong nerved pioneer women of the West. Among the many incidents illustrative of this subject we subjoin the following:

Some time in the year 1785 or '6, Mrs. Woods, a young married female who lived near the Crab Orchard settlement in Kentucky, happening early one morning, on the absence of her husband, to be in a field near her cabin, discovered a party of Indians making toward it. She ran, and reached it before all but one, who was so far ahead of the others that before she could close and fasten the door he entered. Instantly he was seized by a lame negro man of the family, and in the scuffle the negro fell underneath, upon which Mrs. Woods seized an ax which was under the bed and dispatched the Indian. The other Indians, who, in the meantime, were endeavoring to break open the door with their tomahawks, were soon driven off by a party of men coming to their rescue.

Early one morning, in August of 1782, Samuel Daviess, a settler at Gilmer's Lick, Kentucky, having stepped a few paces from his cabin, was suddenly surprised by an Indian appearing between him and the door with an uplifted tomahawk, almost within striking distance; and, in a moment after, he perceived that four other Indians had just entered his dwelling. Being entirely unarmed, he made for an adjacent cornfield, closely pursued by the first Indian. He, however, eluded the savage, and ran with the utmost speed to the nearest station, five miles distant, and raised a party to pursue the enemy, whom it was ascertained, on visiting the cabin, had taken off the whole family captive. They followed in their trail, and, by nine o'clock in the forenoon, had rescued the whole family, without the loss of a single life. Mrs. Daviess then related the following account of the manner in which the Indians had acted.

A few minutes after her husband had opened the door and

stepped out of the house, four Indians rushed in, while the fifth, as she afterward found out, was in pursuit of her husband. Herself and children were in bed when the Indians entered the house. One of the Indians immediately made signs, by which she understood him to inquire how far it was to the next house. With an unusual presence of mind, knowing how important it would be to make the distance as far as possible, she raised both her hands, first counting the fingers of one, then of the other—making a distance of eight miles. The Indian then signed to her that she must rise; she immediately got up, and as soon as she could dress herself, commenced showing the Indians one article of clothing after another, which pleased them very much; and in that way, delayed them at the house nearly two hours. In the meantime, the Indian who had been in pursuit of her husband returned with his hands stained with poke-berries, which he held up, and with some violent gestures, and waving of his tomahawk, attempted to induce the belief, that the stain on his hands was the blood of her husband, and that he had killed him. She was enabled at once to discover the deception, and instead of producing any alarm on her part, she was satisfied that her husband had escaped uninjured. After the savages had plundered the house of everything that they could conveniently carry off with them, they started, taking Mrs. Daviess and her children, seven in number, as prisoners along with them. Some of the children were too young to travel as fast as the Indians wished, and discovering, as she believed, their intention to kill such of them as could not conveniently travel, she made the two oldest boys carry them on their backs.

The annexed anecdote further illustrates her heroic character.

Mrs. Daviess was a woman of cool, deliberate courage, and accustomed to handle the gun so that she could shoot well, as many of the women were in the habit of doing in those days. She had contemplated, as a last resort, that if not rescued in the course of the day, when night came and the Indians had fallen asleep, she would rescue herself and children by killing as many of the Indians as she could—thinking that, in a night attack, as many of them as remained would most probably run off. Such an attempt would now seem a species of madness; but to those who were acquainted with Mrs. Daviess, little doubt was entertained that, if the attempt had been made, it would have proved successful.

Kentucky, in its early days, like most new countries, was occasionally troubled with men of abandoned character, who lived by stealing the property of others, and after committing their depredations, retired to their hiding-places, thereby eluding the operation of the law. One of these marauders, a man of desperate character, who had committed extensive thefts from Mr. Daviess, as well as from his neighbors, was pursued by Daviess and a party whose property he had taken, in order to bring him to justice. While the party were in pursuit, the suspected individual, not knowing

any one was pursuing him, came to the house of Daviess, armed with his gun and tomahawk—no person being at home but Mrs. Daviess and her children. After he had stepped into the house, Mrs. Daviess asked him if he would drink something, and having set a bottle of whisky on the table, requested him to help himself. The fellow not suspecting any danger, set his gun up by the door, and while drinking, Mrs. Daviess picked up his gun, and placing herself in the door, had the gun cocked and leveled upon him by the time he turned round, and in a peremptory manner ordered him to take a seat or she would shoot him. Struck with terror and alarm, he asked what he had done. She told him he had stolen her husband's property, and that she intended to take care of him herself. In that condition she held him a prisoner until the party of men returned and took him into their possession.

In the year 1786, about twenty young persons of both sexes were in a field pulling flax, in the vicinity of a fort on Green River, Kentucky, when they were fired on by a party of Indians in ambush. They instantly retreated toward the fort, hotly pursued by the savages. Among them were two married women who had gone out to make them a visit, one of whom had taken with her a young child about eighteen months old. The older of the two mothers, recollecting in her flight that the younger, a small and feeble woman, was burdened with her child, turned back in the face of the enemy, they firing and yelling hideously, took the child from its mother and ran with it to the fort, nearly a quarter of a mile distant. During the chase she was twice shot at with rifles, when the enemy was so near that the powder burned her, and one arrow passed through her sleeve, but she escaped uninjured.

On the 24th of December, 1791, a small party of Indians attacked the dwelling-house of Mr. John Merrill, in Nelson county, Kentucky. Mr. Merrill, who was first alarmed by the barking of his dog, opened the door to discover the cause, when he received the fire of seven or eight Indians, by which his leg and arm were broken. The Indians then attempted to enter the house, but were prevented by the door being closed by Mrs. Merrill and her daughter. The Indians having succeeded in hewing away a part of the door, one of them attempted to enter, but the heroic mother, in the midst of her screaming children and groaning husband, seized an ax and gave the savage a fatal blow, after which she hauled him through the passage into the house. The others, unconscious of the fate of their companion, and supposing that they had now nearly succeeded in their object, rushed forward, four of whom Mrs. Merrill in like manner dispatched before the others discovered their mistake.

The remaining Indians after retiring a few moments, returned and renewed their efforts to enter the house. Despairing of succeeding at the door, they attempted to descend the chimney, upon which Mr. Merrill directed his little son to empty the contents of a feather bed upon the fire. The smoke and heat suddenly brought

down two of the enemy. Mr. Merrill, at this critical moment, exerting every faculty, seized a billet of wood and dispatched the two half-smothered Indians. In the meantime his heroic wife was busily engaged in defending the door against the efforts of the only remaining savage, whom she so severely wounded with the ax that he was soon glad to retire.

A prisoner, who escaped from the enemy soon after the transaction, stated that the wounded savage was the only one that escaped of his party, which consisted of eight; that on his return, being asked by the prisoner "what news?" he answered, "bad news for poor Indian; me lose a son, me lose a broder; the squaws have taken the breech clout, and fight worse than the "Long Knives."

Even children, in the early settlement of the West, not unfrequently performed acts of heroism when brought in collision with the savages. Among the anecdotes on this point often related is that of the two Johnson boys, who in the fall of 1788, killed two Indians near the site of Steubenville. The younger of these, Henry, is, or was lately residing in Monroe county, Ohio, where we made his acquaintance in the spring of 1846. We found him a fine specimen of the fast vanishing race of Indian hunters—tall and erect, with the bearing of a genuine backwoodsman.

These two little fellows, the one nine and the other twelve years of age, were surprised and taken captive in the woods by two Indians, disguised in the dress of white men. At night, when the Indians were asleep, one took a rifle and the other a tomahawk and simultaneously killed their captors, and then escaped to their homes.

THE INDIAN SUMMER.

As connected with the history of the Indian wars of the western country, it may not be amiss to give an explanation of the term "*Indian Summer*."

This expression, like many others, has continued in general use, notwithstanding its original import has been forgotten. A backwoodsman seldom hears this expression without feeling a chill of horror, because it brings to his mind the painful recollection of its original application. Such is the force of the faculty of association in human nature.

The reader must here be reminded that, during the long-continued Indian wars, sustained by the first settlers of the western country, they enjoyed no peace excepting in the winter season, when, owing to the severity of the weather, the Indians were unable to make their excursions into the settlements. The onset of winter was therefore hailed as a jubilee, by the early inhabitants of the country, who, throughout the spring and the early part of the fall, had been cooped up in their little uncomfortable forts, and subjected to all the distresses of the Indian war.

At the approach of winter, therefore, all the farmers, excepting the owner of the fort, removed to their cabins on their farms, with the joyful feelings of a tenant of a prison on recovering his release from confinement. All was bustle and hilarity in preparing for winter, by gathering in the corn, digging potatoes, fattening hogs, and repairing the cabins. To our forefathers, the gloomy months of winter were more pleasant than the zephyrs of spring and the flowers of May.

It however sometimes happened that, after the apparent onset of winter, the weather became warm; the smoky time commenced and lasted for a considerable number of days. This was the *Indian summer*, because it afforded the Indians another opportunity of visiting the settlements with their destructive warfare. The melting of the snow saddened every countenance, and the general warmth of the sun chilled every heart with horror. The apprehension of another visit from the Indians and of being driven back to the detested fort, was painful in the highest degree, and the distressing apprehension was frequently realized.

Toward the latter part of February we commonly had a fine spell of open warm weather, during which the snow melted away. This was denominated the "*parowawing days*"—from the supposition that the Indians were then holding their war councils, for planning off their spring campaigns into the settlements. Sad experience taught us that, in this conjecture, we were not often mistaken.

A DESPERATE BOAT FIGHT.

In May, 1787, a flatboat loaded with kettles intended for the manufacture of salt at Bullitt's lick, left Louisville with thirteen persons, twelve armed men and one woman on board. The boat and cargo were owned by Henry Crist and Solomon Spears; and the company consisted of Crist, Spears, Christian Crepps, Thomas Floyd, Joseph Boyce, Evans Moore, an Irishman named Fossett, and five others, and a woman whose name is not preserved. The intention of the party was to descend the Ohio, which was then very high, to the mouth of Salt River, and then ascend the latter river, the current of which was entirely deadened by back water from the Ohio, to a place near the licks, called Mud Garrison, which was a temporary fortification, constructed of two rows of slight stockades, and the space between filled with mud and gravel from the bank of the river hard by. The works inclosed a space of about half an acre, and stood about midway between Bullitt's lick and the falls of Salt River, where Shepherdsville now stands. These works were then occupied by the families of the salt makers and those who hunted to supply them with food, and acted also as an advanced guard to give notice of the approach of any considerable body of men.

On the 25th of May the boat entered Salt River, and the hands commenced working her up with sweep-oars. There was no current one way or the other—while in the Ohio, the great breadth of the river secured them against any sudden attack, but when they came into Salt River, they were within reach of the Indian rifle from either shore. It became necessary, therefore, to send out scouts to apprise them of any danger ahead. In the evening of the first day of their ascent of the river, Crist and Floyd went ashore to reconnoiter the bank of the river ahead of the boat. Late in the evening they discovered a fresh trail, but for want of light they could not make out the number of Indians. They remained out all night, but made no further discoveries. In the morning, as they were returning down the river toward the boat, they heard a number of guns, which they believed to be Indians killing game for breakfast. They hastened back to the boat and communicated what they had heard and seen.

They pulled on up the river until eight o'clock, and arrived at a point eight miles below the mouth of the Rolling Fork, where they drew into shore on the north side of the river, now in Bullitt county, intending to land and cook and eat their breakfast. As they drew into shore they heard the gobbling of turkeys (as they supposed) on the bank where they were going to land, and as the boat touched, Fossett and another sprang ashore with their guns in their hands to shoot turkeys. They were cautioned of their danger, but disregarding the admonition, hastily ascended the bank. Their companions in the boat had barely lost sight of them, when they heard a volley of rifles discharged all at once on the bank immediately above, succeeded by a yell of savages so terrific as to induce a belief that the woods were filled with Indians. This attack, so sudden and violent, took the boat's company by surprise, and they had barely time to seize their rifles and place themselves in a posture of defense, when Fossett and his companion came dashing down the bank, hotly pursued by a large body of Indians. Crist stood in the bow of the boat with his rifle in his hand. At the first sight of the enemy he brought his gun to his face, but instantly perceived that the object of his aim was a white man, and a sudden thought flashed across his mind, that the enemy was a company of surveyors that he knew to be then in the woods, and that the attack was made in sport, etc., let his gun down, and at the same time his white foeman sunk out of his sight behind the bank. But the firing had begun in good earnest on both sides. Crist again brought his rifle to his face, and as he did so the white man's head was rising over the bank, with his gun also drawn up and presented. Crist got the fire on him, and at the crack of his rifle the white man fell forward dead. Fossett's hunting companion plunged into the water and got safely into the bow of the boat. But Fossett's arm was broken by the first fire on the hill. The boat, owing to the high water, did not touch the land and he got into the river further toward the stern, and swam round with his

gun in his left hand, and was taken safely into the stern. So intent were the Indians on the pursuit of their prey, that many of them ran to the water's edge, struck, and shot at Fossett and his companion while getting into the boat, and some even seized the boat and attempted to draw it nearer the shore. In this attempt many of the Indians perished; some were shot dead as they approached the boat, others were killed in the river, and it required the most stubborn resistance and determined valor to keep them from carrying the boat by assault. Repulsed in their efforts to board the boat, the savages withdrew higher up the bank, and taking their stations behind trees, commenced a regular and galling fire, which was returned with the spirit of brave men rendered desperate by the certain knowledge that no quarter would be given and that it was an issue of victory or death to every soul on board.

The boat had a log-chain for a cable, and when she was first brought ashore the chain was thrown round a small tree that stood in the water's edge, and the hook run through one of the links. This had been done before the first fire was made upon Fossett on shore. The kettles in the boat had been ranked up along the sides, leaving an open gangway through the middle of the boat from bow to stern. Unfortunately the bow lay to shore, so that the guns of the Indians raked the whole length of the gangway, and their fire was constant and destructive. Spears and several others of the bravest men had already fallen, some killed and others mortally wounded. From the commencement of the battle many efforts had been made to disengage the boat from the shore, all of which had failed. The hope was that, if they could once loosen the cable, the boat would drift out of the reach of the enemy's guns; but any attempt to do this by hand would expose the person to certain destruction. Fossett's right arm was broken and he could no longer handle his rifle. He got a pole, and placing himself low down in the bow of the boat, commenced punching at the hook in the chain, but the point of the hook was turned from him, and all his efforts seemed only to drive it further into the link. He at length discovered where a small limb had been cut from the pole, and left a knot about an inch long; this knot, after a number of efforts, he placed against the point of the hook, and, jerking the pole suddenly toward him, threw the hook out of the link. The chain fell and the boat drifted slowly out from the bank; and by means of an oar worked over head, the boat was brought into the middle of the river, with her side to the shore, which protected them from the fire of the Indians. The battle had now lasted upward of an hour. The odds against the crew was at least ten to one. The fire had been very destructive on both sides and a great many of the Indians had been killed; but if the boat had remained much longer at the shore it was manifest that there would have been none of the crew left to tell the tale of their disaster.

The survivors had now time to look round upon the havoc that had been made of their little band. Five of their com-

PESTIVITIES OF THE EARLY FRENCH OF ILLINOIS.

"In the light, fantastic dance, the young and the gay were active participants, while the serene and smiling countenance of the aged Patriarch and his companion in years, and even of the 'Reverend Father,' lent sanction and a blessing."

panions lay dead in the gangway—Spears, Floyd, Fossett, and Boyce were wounded—Crepps, Crist, and Moore remained unhurt. It was evident that Spears' wound was mortal and that he could survive but a few moments. He urged the survivors to run the boat to the opposite side of the river and save themselves by immediate flight, and leave him to his fate. Crepps and Crist positively refused.

But the boat was gradually nearing the southern shore of the river. At this time the Indians, to the number of forty or fifty, were seen crossing the river above at a few hundred yards' distance, some on logs, and some swimming and carrying their rifles over their heads. The escape of the boat was now hopeless, as there was a large body of Indians on each side of the river. If the boat had been carried immediately to the opposite side of the river as soon as her cable was loosened, the survivors might have escaped; but to such minds and hearts the idea of leaving their dying friends to the mercy of the Indian tomahawk was insupportable. The boat at length touched the southern shore—a hasty preparation was made to bury the dead in the woods—Floyd, Fossett, and Boyce got to land and sought concealment in the thickets. Crepps and Crist turned to their suffering friend, Spears, but death had kindly stepped in and cut short the savage triumph. The woman now remained. They offered to assist her to shore that she might take her chance of escape in the woods, but the danger of her position and the scenes of blood and death around her had overpowered her senses, and no entreaty or remonstrance could prevail with her to move. She sat with her face buried in her hands, and no effort could make her sensible that there was any hope of escape.

The Indians had gained the south side of the river, and were yelling like bloodhounds as they ran down toward the boat, which they now looked upon as their certain prey. Crepps and Crist seized a rifle apiece and ascended the river bank; at the top of the hill they met the savages, and charged them with a shout. Crepps fired upon them, but Crist, in his haste, had taken up Fossett's gun, which had got wet as he swam with it to the boat on the opposite side—it missed fire. At this time Moore passed them and escaped. The Indians, when charged by Crepps and Crist, fell back into a ravine that put into the river immediately above them. Crist and Crepps again commenced their flight. The Indians rallied and rose from the ravine, and fired a volley at them as they fled. Crepp received a ball in his left side; a bullet struck Crist's heel and completely crushed the bones of his foot. They parted, and met no more. The Indians, intent on plunder, did not pursue them, but rushed into the boat. Crist heard one long, agonizing shriek from the unfortunate woman and the wild shouts of the savages, as they possessed themselves of the spoils of a costly but barren victory.

Crepps, in the course of the next day, arrived in the neighborhood of Long Lick, and being unable to travel farther laid down

in the woods to die. Moore alone escaped unhurt and brought in the tidings of the defeat of the boat. The country was at once roused. Crepps was found and brought in, but died about the time he reached home. Crist describes Crepps as a tall, fair-haired, handsome man; kind, brave, and enterprising, and possessed of all those high and striking qualities that gave the heroic stamp to that hardy race of pioneers among whom he had lived and died. He had been the lion of the fight. By exposing himself to the most imminent peril he inspirited his companions with his own contempt of danger. He and Crist had stood over Fossett, and kept the Indians treed while he disengaged the cable; and his coolness, during the long and bloody struggle of the day, had won the admiration of Crist himself—than whom a more dauntless man had never contended with mortal foe. Crepps left a young wife and one son, then an infant. His wife was *enceinte* at the time of his death—the posthumous child was a daughter, and is the wife of the Hon. Charles A. Wickliffe, of Kentucky. The son died shortly after he arrived at man's estate.

Crist was so disabled by the wound that he could not walk. The bones of his heel were crushed. He crept into a thicket and laid down—his wound bled profusely. He could not remain there long. His feet were now of no use to him. He bound his moccasins on his knees, and commenced his journey. Piece by piece his hat, hunting-shirt, and vest were consumed to shield his hands against the rugged rocks which lay in his way. He crawled on all day up the river, and at night crossed over to the north side upon a log that he rolled down the bank. He concealed himself in a thicket and tried to sleep—but pain and exhaustion and loss of blood had driven sleep from his eyes. His foot and leg were much swollen and inflamed. Guided by the stars, he crept on again—between midnight and day, he came in sight of a camp fire, and heard the barking of a dog. A number of Indians rose up around the fire, and he crept slowly away from the light. He laid down and remained quiet for some time. When all was still again, he resumed his slow and painful journey. He crawled into a small branch, and kept on down it for some distance upon the rocks, that he might leave no trace behind him. At daylight, he ascended an eminence of considerable height to ascertain, if possible, where he was, and how to shape his future course; but all around was wilderness. He was aiming to reach Bullitt's Lick, now about eight miles distant, and his progress was not half a mile an hour. He toiled on all day—night came on—the second night of his painful journey. Since leaving the small branch the night before, he had found no water—since the day before the battle, he had not tasted food. Worn down with hunger, want of sleep, acute pain, and raging thirst, he laid himself down to die. But his sufferings were not to end here—guided again by the stars, he struggled on. Every rag that he could interpose between the rugged stones and his bleeding hands and knee (for he could now

use but one), was worn away. The morning came—the morning of the third day; it brought him but little hope; but the indomitable spirit within him disdained to yield, and during the day he made what progress he could. As the evening drew on, he became aware that he was in the vicinity of Bullitt's Lick; but he could go no further; nature had made her last effort, and he laid himself down and prayed that death would speedily end his sufferings.

When darkness came on, from where lay, he could see the hundred fires of the furnaces at the licks all glowing; and he even fancied he could see the dusky forms of the firemen as they passed to and fro around the pits, but they were more than half a mile off, and how was he to reach them? He had not eaten a morsel in four days; he had been drained of almost his last drop of blood, the wounded leg had become so stiff and swollen that for the last two days and nights he had dragged it after him; the flesh was worn from his knee and from the palms of his hands. Relief was in his sight, but to reach it was impossible. Suddenly he heard the tramp of a horse's feet approaching him, and hope sprang up once more in his breast. The sound came nearer and still more near. A path ran near the place where he lay; a man on horseback approached within a few rods of him, he mustered his remaining strength and hailed him; but to his utter surprise and dismay, the horseman turned suddenly and galloped off toward the licks. Despair now seized him. To die alone of hunger and thirst, in sight of hundreds and of plenty, seemed to him the last dregs of the bitterest cup that fate could offer to mortal lips. O! that he could have fallen by the side of his friend in the proud battle! That he could have met the Indian tomahawk, and died in the strength of his manhood; and not have been doomed to linger out his life in days and nights of pain and agony, and to die by piecemeal in childish despair. While these thoughts were passing in his mind, the horseman (a negro) regained the licks and alarmed the people there with the intelligence that the Indians were approaching. On being interrogated, all the account he could give was, that some person had called to him in the woods, a half mile off, and called him by the wrong name. It was manifest it was not Indians; and forthwith a number of men set out, guided by the negro, to the place. Crist's hopes again revived, when he heard voices, and saw lights approaching. They came near and hailed. Crist knew the voice, and called to the man by name. This removed all doubt, and they approached the spot where he lay. A sad and mournful sight was before them. A man that had left them but a few days before, in the bloom of youth, health and buoyant spirits, now lay stretched upon the earth, a worn and mangled skeleton, unable to lift a hand to bid them welcome. They bore him home; the ball was extracted; but his recovery was slow and doubtful. It was a year before he was a man again.

The woman in the boat was carried a prisoner to Canada. Ten

years afterward, Crist met her again in Kentucky. She had been redeemed by an Indian trader, and brought into Wayne's camp on the Maumee, and restored to her friends. She informed Crist that the body of Indians which made the attack on the boat, numbered over one hundred and twenty, of whom about thirty were killed in the engagement. The account was confirmed by Indians whom Crist met with afterward, and who had been in the battle. They told Crist that the boat's crew fought more like devils than men, and if they had taken one of them prisoner, they would have roasted him alive. Crist was afterward a member of the Kentucky Legislature, and in 1808, was a member of Congress. He died at his residence in Bullitt county, in August, 1844, aged eighty years.

REBELLION IN TENNESSEE.

THE country now constituting the State of Tennessee, was originally comprised within the territory of the State of North Carolina. The settlers who poured in just after the close of the Revolutionary war, found it of great inconvenience to remain under the jurisdiction of North Carolina. At that time hostilities had been commenced against them by the Creeks and Cherokees; and being unprotected by the troops of North Carolina, and without any government of their own, their situation was perilous. A large proportion of her people determined to form an independent State government, which would enable them to legally assemble a military force for defense.

In 1786, a convention met at Jonesborough, consisting of five members from each county, who declared the district independent of North Carolina, and formed it into a State, under the name of "Frankland." They appointed Col. John Sevier, Governor, elected judges and other State officers, and sent a delegate to Congress, but he was refused admittance; that body being indisposed to countenance this rebellion against North Carolina: that State was determined to maintain her jurisdiction. In 1786, Frankland had two conflicting courts in its jurisdiction; one under the authority of North Carolina, the other under that of the new State, each of which decided that they alone had legal authority. It was a fruitful source of collision and quarrel. The sheriff of Frankland, with his posse, in some instances, went into the other court, seized the papers and turned the officers out of doors. In turn, the party of North Carolina retaliated in the same way. Soon after his inauguration, Gov. Sevier came in collision with Col. Tipton, the most prominent man among the stanch adherents of the old State. From the argument of words, they proceeded to that of the fists, but were separated in the midst of the combat. This example was often imitated among the people, and it was

evident, that in such a crisis things must come to a more serious issue.

The party of North Carolina sent Colonel Tipton their representative to the legislature; taxes were imposed by the authority of both legislatures; the people paid neither, speciously declaring they did not know to which authority they ought to yield their money. Another convention of Frankland met, and elected William Cocke, Esq., to Congress. That body courteously allowed him to address them. He eloquently portrayed, in a speech before them, the helpless and miserable condition of Frankland; on the one hand engaged in a civil war with the parent State, and on the other assailed by the merciless savages. He was heard; Congress interposed to promote harmony, and a general amnesty was passed in regard to all who were willing to yield to the authority of North Carolina. The pacific and decided measures of Congress seemed at once to restore things to their former condition before the formation of the State of Frankland. Under the external appearance of tranquillity remained the smothered fire; a considerable number remained stanch to the cause of the fallen State, and disposed, under the first favorable circumstances, to rear it up again. Governor Sevier still retained his integrity in his faith in the new State.

In 1788, an execution was taken out by the existing government, organized by North Carolina, against the property of Governor Sevier, as he still continued to be called. His negroes had been taken by this execution, during his absence, while contending with the hostile Indians. Considering this illegal, he on his return collected one hundred and fifty men, and proceeded to attack the house of Colonel Tipton, where he was informed his negroes were placed for safe keeping. He also was told that he was sought by Tipton's men to be put in prison. Colonel Sevier was highly exasperated, and he proceeded to the attack of Tipton's house, which stood nine miles from Jonesborough. The dwelling was barricaded and defended by stanch friends of Tipton. Sevier summoned the garrison to surrender; the only reply was for the assailants to disband themselves before the regular troops of the government came to the aid of the besieged. Hostilities were commenced, and one man killed, and a number of men wounded. The morning of the attack was snowy, and the assailing force had hardly commenced an attack upon the house, when news came of the approach of Colonel Maxwell, with one hundred and eighty men, in aid of the besieged. Upon this they fled. Two were taken prisoners. Colonel Tipton determined to hang them upon the spot; he was hardly swayed from his purpose by strong persuasion. This defeat put an end to the pretensions of the partisans of Frankland. Sevier concealed his mortification by removing to the remoter frontier, when, with a number of devoted friends, he gave his services to making war upon the Indians. The Indians made an attack upon the settlements around Knoxville; he drove

them off, and burnt their towns. While thus meritoriously engaged, he was called to the seat of government to answer the charge of high treason. Colonel Sevier was seized at Jonesborough by order of Colonel Tipton, imprisoned and put in irons. He eventually was aided to escape. He was very popular with the mass of the people, in consequence of his services in the Revolution, and his conduct in many Indian fights. By a law of North Carolina he was made an outlaw, and his property confiscated. But his character and public services ultimately created a reaction in his favor; the law was repealed, and he was elected to the Senate of North Carolina, and brigadier-general over the territory.

INCIDENTS OF BORDER WARFARE, FROM THE TERMINATION OF THE AMERICAN REVOLUTION UNTIL THE TREATY OF GREENVILLE.

Soon after the Revolutionary war, treaties were made with the different tribes of Indians in the West and Southwest; and under the impression that these would be effectual in restraining them from hostilities, thousands were induced to emigrate to the "new countries." Hopes based upon such promises were doomed to disappointment. The Shawanese Indians, instigated by the British at Detroit, commenced sending marauding parties into Kentucky in less than two years after the war, and committed so many murders upon emigrants descending the Ohio in boats as to render its navigation extremely perilous.

From the close of the war until 1790, not less than fifteen hundred men, women and children had been killed or carried into captivity by the savages south of the Ohio.

The General Government, anxious to preserve peace, opposed measures of retaliation, and to settle amicably all difficulties, a treaty was made with the Shawanese at the mouth of the Miami, in January, 1786, Generals Richard, Butler and Clarke being the commissioners. No regard being paid to its stipulations, an expedition was organized in Kentucky in the ensuing fall to punish them. It was divided into two divisions. The division under General Clarke of one thousand men assembled at Louisville and marched to Vincennes. There they were delayed nine days in waiting for provisions, which had been sent in transports by water down the Ohio and up the Wabash. This delay, together with a mutiny among the troops, in which three hundred men deserted when within two days' march of the hostile villages, rendered the expedition abortive, and they returned without having seen an enemy, or struck a blow. The expedition under General Logan was more fortunate. He marched into what is now Logan county, Ohio, destroyed eight towns, together with their cornfields, and took seventy or eighty prisoners. This served but to exasperate the enemy to more active hostilities, to retaliate which three hundred

mounted Kentuckians, under Todd, Hinkston, and Kenton, in the succeeding year, crossed the Ohio, and marching up the Scioto about sixty miles, destroyed the Indian town of Chilicothe, on Paint Creek.

In the summer of 1788, the Indian incursions increased in frequency and audacity, and they did their utmost to arrest the settlements of the whites, which had now advanced across the Ohio into the vicinity of Marietta. While some hostile parties were lurking on the banks of the Ohio to attack, decoy or pursue the boats of the emigrant, others were incessantly roaming inland, ambuscading every neighborhood, and patiently watching in covert places to pick off unfortunate individuals who might come within their reach. The early settlers of Illinois also suffered from the depredations of the Kickapoo Indians, that country having its first American settlement founded in 1781, by Western Virginians, near the site of Bellefontaine, in Monroe county.

The artifices of the Indians to decoy the crews of the boats passing down the Ohio into their power were various. Sometimes a single Indian, disguised in the dress of some unfortunate white who had fallen into their hands, appeared on the shore making signals of distress and counterfeiting the motions of a wounded man—or, perhaps, as it was frequently the case, the unhappy white captive was forced by threats of horrible torture to act this part. The crews supposing the suppliants to be their countrymen who had escaped from the Indians, would turn their boats to the shore to take them in, when suddenly on touching the bank, a fierce band of warriors would rush upon them from their ambuscade with terrific yells. Sometimes the savages crawled to the water's edge, wrapped in the skins of bears, and thus alluring the boatmen, who were ever ready to exchange the oar for the rifle, into their power.

The situation of those who fell into the hands of the savages was truly pitiable. Some were subjected to most unnatural and slow tortures. Some were butchered in their beds in the darkness of night. Many scalps were shown clotted with gore! limbs were terribly mangled! women were ripped up! the heart and bowels still palpitating with life and smoking on the ground! The barbarians not satisfied with even this, were seen swilling their blood and imbibing a more courageous fury from the draught.

In January, 1789, two treaties were made by the Indians at Fort Harmar, at the mouth of the Muskingum, opposite Marietta, by Arthur St. Clair, Governor of the Northwestern Territory. The first was with the Five Nations, and the second with six of the northwestern tribes. It did not produce the favorable results anticipated. The northwestern tribes, in defiance of its stipulations, resumed the hatchet; and the General Government finding their pacific attempts frustrated, were obliged to have recourse to aggressive measures.

Harmar's Expedition.—In the autumn of 1790, about thirteen hundred troops, of whom less than one-fourth were regulars,

marched from Cincinnati under General Harmar against the Indian towns on the Maumee, near the site of Fort Wayne. When within a short distance of their point of destination, Col. Hardin was detached with six hundred and fifty men. This advance, on reaching the Indian villages, found them deserted. The next day, the main body having arrived, their towns, containing three hundred wigwams, were burnt, the fruit trees girdled, and twenty thousand bushels of corn destroyed. While the troops were at the villages a detachment of one hundred and fifty Kentucky militia and thirty regulars, under Colonel Hardin, were sent on an Indian trail, when they fell into an ambush of seven hundred warriors under Little Turtle. At the first fire the militia fled without firing a shot, but the thirty regulars resisted with the greatest obstinacy until all were killed, except two officers and two or three privates. Ensign Armstrong was saved by falling behind a log while on the retreat, which screened him from his pursuers; while Captain Armstrong was preserved by plunging up to his neck in a swamp. There he remained all night a spectator of the war dance over the bodies of the dead and wounded soldiers, the shrieks of the latter, as they were tortured, mingling with the yells of the savages.

When the army had proceeded one day on the return march, Colonel Hardin and Major Willis were sent back with four hundred men, of whom sixty were regulars, to surprise the Indians whom it was supposed would return. On entering the town a few of the enemy were seen, who immediately fled, and decoyed the militia into an irregular pursuit in different directions. This being accomplished, Little Turtle fell, with his main body, upon the regulars with great fury. They threw down their guns, and with their tomahawks, rushed upon the bayonets of the soldiers. While a soldier was engaged in the use of his bayonet upon one Indian, two others would sink their tomahawks in his head. The result was that every regular fell, together with their gallant major. Ere the conflict was over a part of the militia who had returned from the pursuit, joined in the contest, but were compelled to retreat, leaving the dead and wounded in the hands of the enemy.

The expedition, in destroying the Indian villages, had accomplished the great object of its mission, although under circumstances of misfortune. It was succeeded by such vigorous exertions on the part of the savages that they must have succeeded in breaking up the American settlements were it not for the total destruction of their property and provisions just at the approach of winter.

On the second of January (1791) the settlement at Big Bottom, on the Muskingum, about thirty miles above Marietta, was surprised and broken up by the Indians. Twelve persons were killed and a number taken prisoners. So sudden was the attack that no resistance was made by any of the men when the Indians entered the blockhouse; but Mrs. Meeks, a stout, backwoods Virginia woman, seized an ax and inflicted a severe wound upon an Indian

warrior: she was instantly tomahawked. Within a few days all the settlements on the Muskingum, except that at Marietta, were broken up.

On the 9th of the same month, Dunlap's station at Colerain, a few miles north of Cincinnati, was violently attacked by about four hundred Indians, under the notorious Simon Girty. The garrison, consisting of not one-tenth of their number, were United States troops, commanded by Captain Kingsbury. They displayed unusual gallantry, frequently exposing their persons above the pickets to insult and provoke their assailants. While the post was completely surrounded by the enemy, John Wallace volunteered to go to Cincinnati for aid. Late in the night he crossed the Big Miami in a canoe, on the bank of which the fort stood, and thence followed down it some miles; then, although in the dead of winter, he swam the river and directed his course for Cincinnati: but before he returned with aid, the Indians had left.

So constant were the Indians in their depredations around the settlements, that it was unsafe to venture into the woods unarmed; and even at Cincinnati, in sight of Fort Washington, the people were obliged to attend church armed to repel an attack.

In May, seven hundred and fifty Kentuckians, under General Charles Scott, rendezvoused at the mouth of the Kentucky River, and crossing the Ohio on the twenty-third, marched northward with great rapidity. In about three weeks the expedition returned to Kentucky without the loss of a man, after having surprised and destroyed several towns on the Wabash and Eel Rivers, killed thirty-two of the enemy in skirmishes, and taken fifty-eight prisoners.

In the succeeding August, Colonel James Wilkinson left Fort Washington with five hundred and fifty mounted Kentucky volunteers, to complete the work which had been so successfully begun by General Scott against the Indians on the Wabash and its tributaries. The expedition was successful. Several towns were destroyed, the corn was cut up, and thirty-four prisoners taken.

St. Clair's Campaign.—While these military movements were going on against the Wabash Indians, the war department was engaged in raising an army of three thousand men, ordered by Congress for an invasion of the country of the Northwestern Indians; the whole to be placed under the command of Governor St. Clair, as major-general. On the last of August, the troops which had rendezvoused at Fort Washington, to the number of two thousand, marched to Ludlow's station, five miles in advance, where they encamped until the 17th of September, awaiting reinforcements and supplies. Then, their number being augmented to twenty-three hundred men, they marched northwardly, stopping on their route to erect Forts Hamilton and Jefferson. At this last post three hundred militia deserted in a body. Upon this General St. Clair detached the 1st regiment, under Major Hamtramck, to bring them back.

Having made that arrangement, the army moved on and, on the 2d of November, came to a small branch of the Wabash, about one hundred miles north of Cincinnati, within two or three miles of what is now the Indiana State line. Here the troops were encamped in the following order: "upon a very commanding piece of ground, in two lines, having the above mentioned creek in front, the right wing composed of Butler, Clarke, and Patterson's battalions, commanded by Major General Butler, forming the first line; and the left wing consisting of Bedinger and Gaither's battalions and the second regiment, commanded by Col. Darke, formed the second line; with an interval of about seventy yards, which was all the ground allowed. The right flank was pretty well secured by the creek, a steep bank, and Faulkner's corps; some of the cavalry and their picket covered the left flank. The militia were thrown over the creek in advance about a quarter of a mile, and encamped in the same order." The next day the general had intended to throw up a slight work, the plan of which was concerted that evening with Major Ferguson, and to have moved on to attack the enemy as soon as the first regiment had come up. The wily enemy did not wait for this junction of the force opposed to them, but about half an hour before sunrise, on the 4th of November, and just after the men had been dismissed from parade, the attack began on the militia. This portion of the army soon gave way and rushed into camp through the battalions of Butler and Clarke, throwing them into considerable confusion, and followed by the Indians at their heels; the fire of the front line checked them, but almost immediately a very heavy attack began upon that line, and in a very few minutes it was extended to the second likewise. The great weight of it was directed against the center of each, where the artillery was placed, from which the men were repeatedly driven with great slaughter. General St. Clair, who, notwithstanding he was ill, was borne about everywhere in his litter into the thickest of the fire, giving his orders with the coolness and self-possession worthy of a better fortune; he directed Col. Darke to rouse the Indians from their covert with the bayonet, and to turn their left flank. This was executed with great spirit; but although the enemy was driven three or four hundred yards, for want of numbers or cavalry, they soon returned and our troops were forced to give back in their turn. The savages had now got into the American camp by the left flank, having pursued back the troops that were posted there. Again several charges were made with effect; but in these efforts great carnage was suffered from the concealed enemy, and particularly by the officers. Every officer of the second regiment fell except three, and more than half the army was killed. Under this lamentable slaughter it became necessary to make another charge against the enemy, as if with a view to turn their right flank, but in fact to regain the road from which the army was intercepted. This object attained, the retreat began and soon degenerated into a "flight," a "precipitate one

it was in fact," as so honestly owned in the simple and dignified dispatch of Gen. St. Clair. Arms were thrown away even after the pursuit had ceased; the artillery was necessarily abandoned, for not a horse was left to have dragged it off, had that been practicable, and the general was mounted on a pack-horse "which could not be pricked out of a walk." "The rout continued quite to Fort Jefferson, twenty-nine miles from the scene of action," which was reached about sunset; while the battle ended about half after nine in the morning.

The melancholy result of this action was felt and lamented by all who had sympathy for private distress or public misfortune. The officers exposed themselves in an unusual degree to rally the men and remedy the want of discipline, and hence the loss fell heavily upon them. It was alleged by the officers, that the enemy far outnumbered their troops; a conclusion drawn from the fact that they outflanked and attacked the American lines with great force at the same time on every side.

The Indians engaged in the battle were supposed to number about two thousand, and were under the command of Blue Jacket, Buckongahelas, and Little Turtle. In this disastrous action the number of killed and wounded was over nine hundred, among whom were forty-nine commissioned officers. The Indian loss was only about sixty killed. Accompanying the army was a large number of women, of whom fifty-six were killed. The unfortunate men who fell into the enemy's hands with life were used with the greatest torture, having their limbs torn off; and the poor women were treated with the most indecent cruelty, stakes as large as a person's arms being driven through their bodies.

Among the officers in St. Clair's defeat, who distinguished themselves in the war of the Revolution, was Captain Littell, of Essex county, New Jersey. He was engaged as a partisan officer in the early part of the war, having been in no less than thirteen skirmishes with the enemy, in several of which, particularly in the attack on Springfield, he gained great credit for his daring bravery. He was also at the battles of Brandywine and Germantown, where he commanded a company of artillery.

His broken fortunes eventually compelled him to turn his attention to the new lands of the West. Considering the contemplated expedition of St. Clair as giving a favorable chance to explore the country, he applied for a commission; but being too late in his application, he together with his son, a young man just of age, enlisted in the ranks under the supposition generally entertained, that there would be no fighting—that the Indians, overawed by the formidable force of St. Clair, would sue for peace. In the action, his company, one of the best in the army, was stationed on the right wing. It was composed mainly of young men from New Jersey, many of whom had come out principally with the object of viewing the country; more than one half of whom fell on this disastrous occasion. Being hotly engaged, Captain Littell was not

aware of the order to retreat, until the enemy were in the encampment. Closely followed by the Indians, he then sprang down the bank of the creek, gained the opposite bank, accidentally stepped into a hollow, and fell unharmed amid a shower of bullets from his pursuers who, supposing him killed, turned their attention in another direction, doubtless intending to scalp him at leisure. Screened from observation by the grass and underwood, he was emptying his boots of water with which they had been filled, and making other preparations to facilitate his flight, when he was discovered by a solitary Indian, who ran over to the bank on which Littell lay. Failing to climb it on the first attempt, he reached over and laid down his rifle to facilitate that object; as he rose above the bank Littell plunged his sword into his breast, when the savage fell back dead into the water. This adventure being over, Littell fled, and after two days of weary, solitary wandering arrived safe at Fort Jefferson.

His son, Stephen, had a still more remarkable escape. At the commencement of the battle he was with an advanced party, who being closely pressed by the enemy, were compelled to fall back. Unable to keep up with his comrades, he sprang aside and hid in some fallen brushwood, the Indians in the meanwhile hurrying on to the attack, having got between him and the rest of the troops. There he lay in dreadful suspense until the battle was over and the Indians in full pursuit of the flying army, when he ventured to the scene of conflict. The dead and wounded lay strewn in every direction. The scalped heads, in the heavy morning frost, were reeking with smoke; groans of agony ascended from all quarters, and many of the wounded begged him to terminate their misery and thus save them from the horrible tortures that were to ensue. This he refused, but did his utmost to assist some of them to places of comparative safety. Among the dead he saw, lying upon his face, an officer whose figure bore a striking resemblance to his father. He was in the act of turning him over to examine his features, when the terrific shouts of some of the savages, returning from the pursuit, compelled him to secrete himself in the top of a fallen tree. He had barely time to screen himself from casual observation when the Indians came bounding upon the ground, yelling like so many demons, and pouncing upon the unfortunate wounded, commenced with a fiend-like avidity to perpetrate upon them all sorts of barbarities. What were his emotions as he, from his hiding-place, witnessed these atrocities, cannot well be described. At one moment he thought he was discovered—a party of the Indians set up some of the wounded as targets, and were amusing themselves in striving to see how near they could throw their tomahawks without hitting them. A weapon, thus thrown, fell so near that he could easily have reached out his hand and taken it, when a savage sprang forward, and as he approached the spot Littell thought his eye rested upon him, and considered himself as lost. The Indian, however, intoxicated with his tri-

umph, fortunately did not see him; but catching up his murderous weapon, he buried it in the brains of his unfortunate victim, and then left to commit new atrocities. Among the Indians was a white man, probably Simon Girty, who appeared to exercise considerable influence. Poor Littell, in momentary expectation of discovery, determined to rush out and claim his protection; but was restrained by witnessing his monstrous barbarities, in which he appeared to excel even the savages themselves. Among other things he saw them throw two pieces of artillery into the creek. He did not abandon his hiding-place until they had all left the field, when he set off in the direction of the fort—the last person who left the battle-ground.

These various campaigns had inflamed the rage and malice of the savages to the highest pitch, and prompted them to fill the country with marauding parties, whose depredations and cruelties were most distressing.

In the succeeding April (1792), General Anthony Wayne was appointed to the command of the Northwestern army. He accepted the office on the express condition that he should not be required to advance against the enemy until the army was full and well disciplined. For this purpose the general government were making extraordinary exertions for a vigorous and effective campaign.

In the course of the season, unsuccessful attempts were made to open a negotiation with the Indians to effect a general peace. Colonel Hardin and Major Trueman, who had been sent on embassies with flags from Fort Washington, were barbarously murdered.

During the year, the advanced Forts St. Clair and Jefferson, in the Miami country, were frequently assailed by the Indians, and skirmishes often took place between the Indians and parties of soldiers passing to and fro between these posts and Fort Washington, at Cincinnati. On the 6th of November, a severe action took place almost under the guns of Fort St. Clair, between one hundred mounted Kentuckians, commanded by Captain Adair, and two hundred and fifty Indians, under Little Turtle, in which the whites were worsted.

In the spring following (1793), while arrangements for the campaign were going on, commissioners were appointed to negotiate a treaty with the Northwest Indians, on the basis of that of Fort Harmar. They proceeded to Niagara, crossed Lake Erie in a vessel, and landed at the mouth of Detroit River in the latter part of July. They held a council there with a deputation of twenty Indians, from about as many different tribes, assembled at the foot of the Maumee Rapids. The Indians denied the validity of the treaty of Fort Harmar, made in 1789, on the ground that it was made with chiefs of two or three nations only, who had no right to cede any territory to the whites. They insisted on the first treaty of Fort Stanwix, made in 1768, which establishes the Ohio

River as the boundary, and that if the United States wished to make a firm and lasting peace, they would immediately remove all their people from the upper side of that river, which the Indians claimed as their own. The commissioners, in reply, called the attention of the Indian deputies to the second treaty of Fort Stanwix, made in 1784, and to that of Fort Harmar, by which the United States purchased large tracts of land from the Indians north of the Ohio, which had been settled by the whites at great expense, and could not be given up on any terms whatever. They also offered liberal pecuniary inducements to them to confirm the extensive grant of land in the Ohio country made by the treaty of Fort Harmar. The Indians, however, would not agree to any other boundary than the Ohio, and the council was broken up. It was evident that a treaty satisfactory to both parties would have been made, but for the influence steadily and successfully exerted on the minds of the savages by the agents of the British government.

All prospects of peace now being at an end, Wayne advanced with his forces about eighty miles northward from Cincinnati, and erected a fort on the site of Greenville, Ohio. In October, while Lieutenant Lowry, with ninety men, was conveying military stores for the supply of the army, they were attacked at Ludlow's Spring, about seven miles northerly from the site of Eaton, Ohio, by a superior body of Indians under Little Turtle. They made an obstinate resistance. Lieutenant Lowry, Ensign Boyd, and thirteen of the men were slain, and seventy horses were either carried off or killed by the savages.

Wayne remained at Greenville through the winter and spring until midsummer (1794), actively preparing for his campaign against the savages. He was assiduous in drilling his men according to a plan suggested to him by Washington, in the peculiar tactics necessary to fighting the Indians, the want of which had been so disastrous to Harmar and St. Clair. The men were taught to load when running, and while on a march, even in a dense forest, to form instantly in a line of battle. Instead of being instructed to stand in dense order, according to the European manner, which had proved so fatal to the whites in previous campaigns, they were taught to form in extreme open order, and in such a way as to prevent them from being outflanked.

Wayne sent forward, twenty-three miles north from Greenville, a detachment of troops to the spot where St. Clair had been defeated more than two years previous. The bones of the dead were thickly strewn around; although destitute of flesh, yet in many cases the sinews still held them together. The bones were then all buried, six hundred skulls being among them. This melancholy duty performed, they erected a fortification called Fort Recovery, and garrisoned it with two companies. On the 30th of June, a severe and bloody battle was fought under the walls of

this fort, between a detachment of troops who had come up from Greenville with supplies, consisting of ninety riflemen and fifty dragoons, under Major M'Mahon, and about fifteen hundred Indians, aided by a considerable number of British soldiers and Canadian militia from Detroit. At the same instant, they rushed on the detachment and assailed the fort on every side with great fury. They were repulsed with a heavy loss; renewed the attack, and kept it up through the entire day. The next morning M'Mahon's detachment entered the fort, when they again assailed the post, and fought with desperation during the day; but owing to the skill and bravery of the garrison, were eventually compelled to retreat. Their loss was very great—more than double what they experienced at the defeat of St. Clair, and it continued to be severely felt by them for a long time after. The Indians exposed their persons in an unusual degree, and were determined to conquer or perish. Three British officers were present, dressed in scarlet, who encouraged them to persevere. The loss of the Americans was about fifty in killed and wounded; among the former was the brave Major M'Mahon.

In the latter part of July, Wayne was reinforced by sixteen hundred mounted Kentuckians under General Scott, which augmented his army to near four thousand strong. All things being in readiness, on the 29th, he took up his line of march for an attack upon the Indians, who were concentrated upon the Maumee in strong force, having made great preparations to encounter their invaders. He advanced by slow and regular marches, proceeding with the utmost caution to guard against surprise. The army generally halted and pitched their tents about the middle of the afternoon; and the ground of the encampment being previously marked out by the surveyor, each company fortified in front of its position by cutting down trees and erecting a breast-work, so that by dark a complete fortification inclosed the camp.

On the 4th, the army arrived at St. Mary's River, forty-seven miles from Greenville, where they erected Fort Adams, garrisoned it with one hundred men, and then resumed its march. On the 8th of August, they encamped at the junction of the Auglaize with the Maumee, one hundred and three miles north of Greenville, at which point stood some of the finest villages of the Indians, which they had deserted at the approach of the troops. Here Wayne halted several days, and commenced the construction of Fort Defiance, on the site of the present town of that name. While there, Wayne received full information of the Indians, and the assistance they were to derive, from the volunteers at Detroit and vicinity. On the 13th of August, true to the spirit of peace advised by Washington, he sent Christian Miller, who had been naturalized among the Shawanese, as a special messenger to offer terms of friendship. Impatient of delay, he moved forward, and on the 16th, met Miller on his return with the message, that if the Americans would wait ten days at Grand Glaize (Fort Defiance),

they, the Indians, would decide for peace or war. On the 18th, the army arrived at *Roche de Bouf*, just south of the site of Waterville, where they erected some light works as a place of deposit for their heavy baggage, which was named Fort Deposit. During the 19th, the army labored at their works, and about eight o'clock on the morning of the 20th moved forward to attack the Indians, who were encamped on the bank of the Maumee, at and around a hill called "Presque Isle," about two miles south of the site of Maumee City, four south of the British Fort Miami, and twelve south of the site of Toledo—all of the above being on the west bank of the river. From Wayne's report of the battle, we make the following extract.

The legion was on the right, its flank covered by the Maumee: one brigade of mounted volunteers on the left, under Brig. Gen. Todd, and the other in the rear, under Brig. Gen. Barbee. A select battalion of mounted volunteers moved in front of the legion, commanded by Major Price, who was directed to keep sufficiently advanced, so as to give timely notice for the troops to form in case of action, it being yet undetermined whether the Indians would decide for peace or war.

After advancing about five miles, Major Price's corps received so severe a fire from the enemy, who were secreted in the woods and high grass as to compel them to retreat. The legion was immediately formed in two lines, principally in a close thick wood, which extended for miles on our left, and for a very considerable distance in front; the ground being covered with old fallen timber, probably occasioned by a tornado, which rendered it impracticable for the cavalry to act with effect, and afforded the enemy the most favorable covert for their mode of warfare. The savages were formed in three lines, within supporting distance of each other, and extended for near two miles at right angles with the river. I soon discovered, from the weight of the fire and extent of their lines, that the enemy were in full force in front, in possession of their favorite ground, and endeavoring to turn our left flank. I therefore gave orders for the second line to advance and support the first; and directed Major-General Scott to gain and turn the right flank of the savages, with the whole force of the mounted volunteers, by a circuitous route; at the same time I ordered the front line to advance and charge with trailed arms, and rouse the Indians from their coverts at the point of the bayonet, and when up, to deliver a close and well-directed fire on their backs, followed by a brisk charge, so as not to give them time to load again.

I also ordered Captain Mis. Campbell, who commanded the legionary cavalry, to turn the left flank of the enemy next the river, and which afforded a favorable field for that corps to act in. All these orders were obeyed with spirit and promptitude; but such was the impetuosity of the charge by the first line of infantry that the Indians and Canadian militia and volunteers were driven from all their coverts in so short a time, that although every possible

exertion was used by the officers of the second line of the legion, and by Generals Scott, Todd, and Barbee, of the mounted volunteers, to gain their proper positions, but part of each could get up in season to participate in the action; the enemy being driven in the course of one hour, more than two miles through the thick woods already mentioned, by less than one-half their numbers. From every account the enemy amounted to two thousand combatants. The troops actually engaged against them were short of nine hundred. This horde of savages, with their allies, abandoned themselves to flight, and dispersed with terror and dismay, leaving our victorious army in full and quiet possession of the field of battle, which terminated under the influence of the guns of the British garrison.

The loss of the enemy was more than that of the federal army. The woods were strewed for a considerable distance with the dead bodies of Indians and their white auxiliaries, the latter armed with British muskets and bayonets.

We remained three days and nights on the banks of the Maumee, in front of the field of battle, during which time all the houses and corn-fields were consumed and destroyed for a considerable distance, both above and below Fort Miami, as well as within pistol-shot of the garrison, who were compelled to remain tacit spectators to this general devastation and conflagration, among which were the houses, stores, and property of Colonel M'Kee, the British Indian agent and principal stimulator of the war now existing between the United States and the savages.

The loss of the Americans in this battle was thirty-three killed and one hundred wounded, including five officers among the killed, and nineteen wounded.

One of the Canadians taken in the action, estimated the force of the Indians at about fourteen hundred. He also stated that about seventy Canadians were with them, and that Colonel M'Kee, Captain Elliott, and Simon Girty were in the field, but at a respectable distance and near the river. When the broken remains of the Indian army were pursued under the British fort, the soldiers could scarce be restrained from storming it. This, independent of its results in bringing on a war with Great Britain, would have been a desperate measure, as the fort mounted ten pieces of artillery, and was garrisoned by four hundred and fifty men, while Wayne had no armament proper to attack such a strongly fortified place. While the troops remained in the vicinity, there did not appear to be any communication between the garrison and the savages. The gates were shut against them, and their rout and slaughter witnessed with apparent unconcern by the British. That the Indians were astonished at the lukewarmness of their real allies, and regarded the fort, in case of defeat, as a place of refuge, is evident from various circumstances, not the least of which was the well known reproach of Tecumseh, in his celebrated speech to Proctor, after Perry's victory. The near approach of the troops

drew forth a letter of remonstrance from Major Campbell, the British commandant, to General Wayne. A sharp correspondence ensued, but without any especial results. The morning before the army left, General Wayne, after arranging his force in such a manner as to show that they were all on the alert, advanced with his numerous staff and a small body of cavalry, to the glacis of the British fort, reconnoitering it with great deliberation, while the garrison were seen with lighted matches, prepared for any emergency. It is said that Wayne's party overheard one of the British subordinate officers appeal to Major Campbell for permission to fire upon the cavalcade, and avenge such an insulting parade under his majesty's guns; but that officer chided him with the abrupt exclamation, "*Be a gentleman! be a gentleman!*" On the 27th, Wayne's army returned to Fort Defiance by easy marches, laying waste the villages and cornfields of the Indians for about fifty miles on each side of the Maumee.

Wayne received very essential aid during the campaign from a band of some six or eight spies, who brought in at different times more than twenty prisoners, beside killing many of the enemy. Several of them had been in their earlier days taken captive by the Indians, and adopted and bred by them. The Indian language and customs were as familiar to them as that of the whites. Their commander was Captain William Wells, who had been taken captive while a child, and adopted by the famous Little Turtle. In the defeat of St. Clair, Wells commanded a large body of warriors with great skill and effect. A short time after he determined to abandon the savages, and announced this determination to his adopted father, Little Turtle, one morning when traversing the woods. Pointing to the heavens, he said, "When the sun reaches the meridian, I leave you for the whites; and whenever you meet me in battle you must kill me, as I shall endeavor to do by you." This event did not shake the bonds of intimacy and friendship between these gifted men. Wells soon after joined Wayne's army, and by his intimacy with the wilderness, and perfect knowledge of the Indian haunts, habits, and modes of Indian warfare, became an invaluable auxiliary. When the war was over Wells renewed his friendship and connection with Little Turtle, which continued until the death of the latter.

Wells was killed at the massacre at Chicago in 1812. Not wishing to fall into the enemy's hands, and to avoid a cruel and lingering death, he wetted powder and blacked his face, as a token of defiance, mounted his horse and commenced addressing the Indians with all the opprobrious and insulting language he could think of. His purpose evidently was to induce them to dispatch him forthwith. His object was accomplished. They became so enraged at last with his taunts and jeers that one of them shot him off his horse, and immediately pouncing upon him, cut his body open, took out his heart and eat it. The Indians it is said also drank his

blood, from a superstitious belief that they should thus imbibe his warlike endowments.

Among the many anecdotes related of the confidence and self-possession of Wells and his spies, during Wayne's campaign, is the following:

While Wayne's army lay at the Indian village at the confluence of the Auglaize and Maumee, building Fort Defiance, the general, wishing to be informed of the intentions of the enemy, dispatched Captain Wells' party to bring in another prisoner. It consisted of Wells, M'Clellan, the Millers, May, and Mahaffy. They proceeded cautiously down the Maumee until opposite the site of Fort Meigs, where was an Indian village. This was on the 11th of August, nine days before the battle. Wells and his party, disguised as Indians, boldly rode into this town, as if they had come from the British fort, and occasionally stopped and talked with the Indians in their language. The savages believed them to be Indians from a distance, who had come to take a part in the expected battle. After passing through the village, they met, some distance from it, an Indian man and woman on horseback, who were returning to town from hunting. They made them captives without resistance, and set off for Defiance.

A little after dark they came near a large encampment of Indians, merrily amusing themselves around their camp fires. Ordering their prisoners to be silent under pain of instant death, they went around the camp until they got half a mile above it. They then held a consultation, tied and gagged their prisoners, and rode into the Indian camp with their rifles lying across the pummels of their saddles. They inquired when they had heard last of Gen. Wayne and the movements of his army, and how soon and where they expected a battle would be fought? The Indians standing about Wells and his party were very communicative, and answered the questions without any suspicions of deceit in their visitors. At length an Indian who was sitting at some distance said, in an under tone, in another tongue, to some who were near him, that he suspected these strangers had some mischief in their heads. Wells overheard it, gave the preconcerted signal, and each fired his rifle into the body of an Indian, at not more than six feet distance. The moment the Indian had made the remark, he and his companions rose up with their rifles in hand, but not before each of the others had shot his man. The moment after Wells and party had fired, they put spurs to their horses, lying with their breasts on their animals' necks, so as to lessen the mark to fire at, and before they had got out of the light of the camp fires, the Indians had fired upon them. As M'Clellan lay in this position, a ball entered beneath his shoulder-blade and came out at the top of his shoulder; Wells' arm was broken by a ball, and his rifle dropped to the ground; May was chased to the smooth rock on the Maumee, where, his horse falling, he was taken prisoner, and next day set up as a target and riddled with bullets. The rest of

the party escaped without injury and rode full speed to where their prisoners were confined, and putting them upon horses, continued their route.

Indian Hostilities in the Southwestern Territory.—While the events narrated in the previous pages of this article were transpiring in the region of the Northwest Territory, the pioneer population of the Southwestern Territory, now the State of Tennessee, suffered from the hostilities of the Cherokees and Creeks. As early as 1789, murders upon the inhabitants of that Territory had become quite frequent. To conciliate the hostile tribes, Gov. Blount (Superintendent of Indian Affairs for the general government) negotiated with them for the sale of their lands and the adjustment of all difficulties on just terms. Continuing these negotiations through the years 1790–91 he was enabled to keep the great mass of these powerful nations from making open war; but could not prevent the encroachment of emigrants upon their lands, which brought on a partisan warfare on the frontier. In spite of his persevering efforts these two nations, in the early part of 1792, were making preparations for a grand invasion and destruction of the settlements. They were secretly supplied with arms and ammunition, and instigated to hostilities by emissaries of Spain; that power being as jealous of the advance of the Americans toward their settlements in the South, as was that of Britain toward theirs in the North.

Attack on Buchanan's Station.—These scenes of partisan warfare continued until the summer of 1792, when Gov. Blount held a council at the farm of Gen. James Robertson with the Indians, with the view on the part of the whites to peace, and on that of the Cherokees, as subsequent events seemed to confirm, to ascertain the vulnerable points of the whites.

During the council one of the chiefs was frequently heard to say that, "before the leaves fall, an attack would be made on the white settlements." This intimation had the effect of inducing the settlers to prepare for defense.

Buchanan's Station was on the road from Nashville to the Cherokee nation, about four miles from the former. It was on high ground, on the bank of a creek, and consisted of a few log cabins surrounded by a slender picket. Major Buchanan invited several of the Cherokee chiefs to his home, where he entertained them with hospitality. They carefully examined the fort and its means of resistance, and several times carelessly remarked that "such a fort could afford but little protection."

About the beginning of September, Joseph Durat, a Frenchman who had resided among the Indians, and Richard Fennelstone, a half-breed Cherokee, arrived from the Cherokee nation, and communicated the intelligence that they intended to attack Buchanan's station on or about the 10th of September, and then fall upon the other stations in the neighborhood and upon Nashville. On receiving this information, Gen. Robertson ordered the militia to

assemble at Rains', about two miles south of Nashville, when about three hundred men, nearly the whole effective force of the district, assembled. To ascertain the truth of the report of Durat and be apprised in time of the approach of the enemy, Abraham Castleman, a man of bold and daring spirit, was sent out as a spy. He proceeded cautiously to the "Black Fox Camp," near the site of Murfreesboro', and having discovered Indian traces, returned. This tended to confirm the report; but as the time mentioned for the attacks had elapsed, and as Watts, the Cherokee chief, had repeatedly assured Governor Blount of his peaceable intentions, the apprehensions of the settlers were quieted and the militia disbanded. Two men had been dispatched as scouts, who started toward the Cherokee nation, on what was called Taylor's trace. A few miles south of the station they met the advancing enemy and fell victims to the tomahawk. The Indians secretly advanced, and at midnight on the 30th September their force, consisting of about eight hundred warriors, appeared before Buchanan's station.

This formidable body was commanded by Watts, a half-breed Cherokee, a chief of noble and commanding person, who had given many proofs of magnanimity and humanity in his wars with the whites, and a distinguished chief of the Shawanees, whose name is not recollected. The first intimation the inmates of the fort had of their approach was from the barking of the dogs. Two men in a blockhouse, awakened by the noise, looked out and distinctly saw by the light of the moon about sixty Indians approaching. Undismayed by their numbers they fired upon them; the Indians returned the fire, and the woods resounded with the warhoop. This roused the remainder of the little garrison, consisting of but twenty men and several women and children. Each man flew to his post, determined to repulse the enemy or die. The women, not less resolute, determined to share the glory of the defense with their fathers, husbands, and brothers. The wife of Major Buchanan was particularly distinguished. The Indians, relying on their superiority, soon surrounded the fort in certain expectation of compelling a surrender; they approached so near that they fired into the port-holes, and several times attempted to set fire to one of the block-houses. For a moment this little garrison thought all was lost. Determined, however, to sell their lives as dearly as possible, they kept up a vigorous fire, and many of the assailants were seen to fall. The attack and defense were continued for about an hour, when the Shawanee chief was killed and Watts severely wounded. The face of affairs now changed; dispirited by the death of the Shawanee chief and the wound of Watts, the Indians precipitately retreated. At a treaty held subsequently Watts admitted their loss to have been thirty killed and a number wounded. In the fort not one was killed and but two wounded. In consequence of this signal repulse and defeat, the intended attack upon Nashville and the neighboring fort was abandoned.

The succeeding year (1793) the Indians so infested the settle-

ments with their scouting parties, that the walls of the stockades were the only places of security. In the military operations undertaken this year against the Indians, Gen. Sevier became greatly distinguished. The savages, however, usually avoided a general engagement, relying mainly upon their small parties to harass the settlers, and were kept somewhat in awe by the formidable preparations of Wayne in the north.

The next year an important expedition was undertaken against the Nickajack towns on the Tennessee, one of the principal sources of mischief to the whites. Their villages were destroyed, and a few months after the Indians sued for peace.

In the north the effect of Wayne's victory was crushing to the hopes of the Indians. The destruction of their towns and their vast fields of corn, which spread along the banks of the Maumee and Auglaize for over fifty miles, reduced them to great privation and suffering, and they were compelled to sue for peace. Had Wayne been defeated, it is believed that the northern and southern Indians, respectively incited by British and Spanish emissaries, would have united in one grand confederacy for the extermination of all the settlements west of the mountains.

On the 3d of August, 1795, Wayne concluded a treaty of peace with the northwest tribes at Greenville, in grand council assembled. The negotiation lasted over six weeks, during which over one thousand Indians were assembled, among whom were the chiefs most noted for bravery and eloquence. On this occasion the Indians ratified the concessions of land made at the treaties of Forts M'Intosh and Harmar, including several other grants. It was a most important era in the history of the West which, for nearly half a century, had been the theater of almost continuous Indian wars. It filled the whole nation with rejoicing, and gave a great impetus to the settlement of the West.

The Nickajack Campaign.—What has been termed the Nickajack Campaign, was an expedition of the settlers of Tennessee, undertaken in 1794 against a branch of the Cherokee nation. The annexed detailed narrative of that campaign was orally communicated to us in the spring of 1850, by the late James Collier, of Xenia, Ohio, who served as a spy on that occasion.

The Cherokee nation generally respected the treaty of Holston, made on the site of Knoxville, in July, 1791. A minority only were dissatisfied with it, and refused to acquiesce in its terms. Separating from the rest, they settled on the Chickamauga, and became known as the Chickamauga Indians. From this branch of the tribe mainly originated all the depredations and murders subsequently committed upon the settlements in Tennessee, a fact which appears to have been entirely lost sight of by writers of that period.

A branch of the Chickamaugas settled the Nickajack towns. They were three in number, and situated on the south bank of the Tennessee, about fifty miles above the site of Huntsville. The lower

town, name not recollected, contained about twenty houses; two miles above stood Nickajack, containing about two hundred dwellings; and Running Water, which was larger still, was near five miles above Nickajack. These villages indicated considerable civilization; the houses were principally built of round logs, and covered with split boards and fine bark; within, at the end of each dwelling, was a fire-place. The council-house, which was at Running Water, was a regular circle, of sixty or seventy feet diameter, with a conical roof running up to a point, and the whole was covered with bark. The towns were surrounded by potatoe and cornfields, peach-orchards and melon-patches. Their sites were pleasant, and that of Running Water of unusual natural beauty.

In the year 1794, the depredations of the Nickajack Indians had excited so much alarm, that some of the leading men of the country saw the necessity of punishing them. Colonel William Whitley, of Lincoln county, Kentucky, whose residence was near the Crab Orchard settlement, originated the plan of the invasion of their towns. After General Scott had raised a force to join Wayne, Whitley put this plan into execution, corresponding for the purpose with General James Robertson, of Middle Tennessee, and Colonel John Orr, of East Tennessee; the latter of whom commanded at the time a company of United States Rangers, under the general control of William Blount, Governor of the Southwest Territory. Their preparatory measures were conducted with great secrecy, for it was feared that Governor Blount, had it come to his knowledge, would have frustrated the expedition, under the apprehension that the friendly Cherokees would have suffered.

On the 20th of August, a day memorable as that of Wayne's victory, Whitley left home for Nashville, the point of rendezvous, with a small party of Kentuckians, which by the time they had arrived at the borders of the State had augmented to one hundred and twenty. At Nashville they were joined by Orr, with his company of Rangers, numbering sixty-two men. In a few days their ranks were increased to six hundred men, all volunteers. About the 6th of September the expedition left Nashville, and the day after organized by the choice of Colonel Whitley as commandant, with Colonel John Orr and Colonel John Montgomery next under him. Richard Fennelstone, a half-breed, acted as guide.

At that time I was about twenty years of age, having come on by invitation from Colonel Whitley, who resided in my vicinity. Upon organizing, Alexander McFarland and Jesse Gray, two old hunters and Indian fighters, were selected as spies, who, in turn, being allowed to select a third, chose me. We three daily kept in advance, looking out for signs, and at night returning to camp. The troops were mainly on horseback, and attired in hunting-shirts. Their provisions were principally bacon and corn-meal, some of it parched. At night the horses were hopped out to grass, and the men lay on their blankets in the open air.

On the night of the 11th, the army arrived at a beautiful spring, the largest I ever saw, on what I believe is the site of Huntsville. We were then fifty miles below the crossing place of the Tennessee, in the vicinity of the Nickajack towns. At midnight of the 12th, the troops reached the crossing place. Great confusion prevailed; for as the night was very dark, many of the men in consequence had become deadly sick from riding on horseback. The only means which we brought with us to cross the stream, which was high and wide from recent rains, were two ox-hide boats. These had been transported on horseback, and being stiff and unwieldy, were first soaked, and then stretched on poles and launched. They were square, box-like in shape, and held each from two to four men. Several rafts were constructed on the spot.

By sunrise, two hundred and forty men having succeeded in crossing, it was thought best to push on, leaving the others, who did not cross at all, and were consequently not participators in the scenes about to be related.

After proceeding about five miles, they came into the vicinity of the lower and smaller towns, where fifteen men were placed in ambush until they heard the attack above, while the main body, making a detour, marched on. When in sight of Nickajack, they formed for the attack in three divisions, the right, center and left, being respectively under Whitley, Orr and Montgomery. The last first came within firing distance, and soon all were warmly engaged. The poor Indians were taken completely by surprise, and made little or no resistance. Indeed, it was a massacre. Large numbers rushed to their canoes to escape, and so many were shot, that the stream was crimsoned with their blood. The Indians having been killed and dispersed, and their women and children taken prisoners, their houses were committed to the flames.

When the melee was about over, several of us tried to shoot an Indian who was escaping in a canoe down the river. He was lying nearly flat, with his arms only showing over the sides, vigorously paddling for life, and our shots failed; but Colonel Whitley coming up, said, "Let me try." I watched his shot, and instantly saw the blood spout out of his shoulder. Subsequently, Joseph Brown swam out to the canoe, and as he was approaching, the Indian entreated him to spare his life; "For," said he, "I'm a Cherokee." Brown, who had been two years a prisoner at Nickajack, and understood their language, inquired, "What were you doing at Nickajack?" "To visit some friends," was the reply. Brown then tomahawked him.

I was amused at an incident that I witnessed between a large, powerful squaw and the famous Joe Logston. She had secreted herself in the brush. Joe, on attempting to take her prisoner, encountered most furious resistance. She fought like a tigress, while he, disdaining to resort to blows, had great difficulty in overcoming her.

Collingsworth, one of our men, related to me an affecting

incident. Entering one of the houses, he saw an Indian mother lying dead on the floor, over whose corpse was crawling an infant of ten or twelve months old, with its bowels hanging out from a wound in the abdomen. He was horrified at the sight, and for a moment debated with himself what was best to be done; then deciding as an act of mercy, he put his rifle to its head and blew out its brains.

At the lower town, those in ambush saw a beautiful Indian maiden beating hominy in a mortar outside of a cabin. In a few moments she was joined by a young man, probably her lover, who placed his arms around her waist, playfully slung her about, and then assisted her with the pestle. While engaged in this sort of dalliance, and unsuspecting of danger, the firing was heard at Nickajack, and then the party here fired, and the Indian lover fell a corpse beside his dusky sweetheart. The maiden was captured; but the party finding resistance likely to be desperate, retreated to Nickajack.

Immediately after shooting the Indian in the canoe, Whitley said to the group around him, that they must proceed without delay to the upper town, lest the Indians might make a stand at the Gap, midway between the villages, and prevent their passage. Starting with from fifteen to twenty men, they hastened toward Running Water. A few Indians were in ambush at the Gap; but after the exchange of a few shots, the latter retreated with slight loss. Being joined at the Gap by more men, the party, among whom I was one, numbering less than forty in all, proceeded to Running Water. As we neared the town, the Indians were discovered in great numbers escaping across the river in their canoes, and on our arrival there, we found it entirely deserted, and nothing was left for us but to commit their dwellings to the flames. To prevent their being tracked by the dogs, the Indians on leaving shut them in their cabins, and when they were burnt, they filled the air with their howlings.

Our troops recrossed the river at a late hour the same night, and on the 14th, commenced our return march. When in the barrens of Green River, we learned the news of Wayne's victory from a party of Chickasaws.

Our loss in this campaign was trifling, we having two men wounded, viz: Luke Anderson slightly in the leg, and S. Donaldson in the heel. He was a brother-in-law of General Jackson, and was supposed to have been shot by our own men. We killed about one hundred and forty Indians, and brought in seventeen prisoners, all females, except two boys. They were subsequently exchanged for white prisoners. The results of this campaign were important. It stopped the murders by the Indians, and in a few months thereafter, the Chickamaugas sued for peace.

FRENCH AND SPANISH INTRIGUES—PLANS TO EFFECT AN INDEPENDENT GOVERNMENT IN THE WEST.

IN the spring of 1793, Genet, the French minister, arrived in this country and was received with great enthusiasm by the people who sympathized with the new republic of France. He at once began a series of intrigues to involve the United States in a war with the enemies of France. He proceeded to arm and equip privateers, and to enlist crews in the American ports to cruise against the commerce of England and Spain, as if this country were openly at war with those powers. At that time democratic societies, in imitation of the Jacobin Clubs of France, had been established in Kentucky. Their spirit was anti-federal. The failure to secure from Spain the free navigation of the Mississippi, the excise upon distilled liquors, the Indian war, what was considered the base truckling to England, and the still baser desertion of France in her terrible struggles with the leagued despotism of Europe, all became subjects of passionate declamation in the clubs and violent invectives in the papers. The protracted negotiation with Spain, relative to the navigation of the Mississippi, which was then in her dominions, had not been closed. The people of the West were jealous upon that subject, and distrustful of the intentions of the Federal Government. It was rumored that government was about to form an alliance with England, that hated power, against their beloved France, and that the old project of giving up to Spain the sole right of navigating the Mississippi was to be revived.

Aware of this deep feeling against the Federal Government, Genet sent four French agents to Kentucky to enlist an army of two thousand-men under the banners of France, to descend the Ohio and Mississippi in boats, and attack, conquer, and bring the Spanish settlements under the dominion of France. These emissaries found their plans met with the warmest approbation, and some of the leading men in Kentucky enlisted in the cause, among whom was General George Rogers Clarke, who was thereupon commissioned Major-General in the French service. The free navigation of the Mississippi forever would be the only direct benefit accruing to Kentucky, but French pay, French rank, and magnificent donations of land in the conquered provinces, were the allurements held out to private adventurers.

President Washington, acting under information from the minister of the king of Spain, used his efforts to suppress these movements. In consequence, General Wayne, whose cavalry was then wintering in Kentucky, wrote to Governor Shelby, that he should, by force of arms, repress any illegal expedition from Kentucky. The Governor, in his reply to the Secretary of State, said that he doubted if this could be legally done, for if it was lawful for one citizen to leave a State, it was equally so for any number. Again he said: "Much less would I assume power to exercise it against men whom I consider as *friends* and *brethren*, in favor of a man

whom I view as an *enemy* and a *tyrant*; I shall also feel but little inclination to take an active part in punishing or restraining my fellow-citizens for a supposed intention only, to gratify or remove the fears of the minister of a prince who openly withholds from us an invaluable right, and who secretly instigates against us a most savage and cruel enemy."

These sentiments were prevalent among a vast majority of all classes of citizens. Upon receiving this answer, Washington, justly alarmed, ordered General Wayne to occupy Fort Massac, which stood on the Ohio River, in the Illinois country, with his artillery, and to take other necessary steps to arrest this rash expedition.

In the meantime, the democratic societies resorted to every method of inflaming the popular mind upon the subject of the navigation of the Mississippi, and the jealousy of the East, which they contended was the true cause of the failure of the general government to procure it for them. They had invited a general meeting of the people in Lexington, in the spring of 1794, where resolutions were adopted of a violent character, breathing the deepest hostility to the general government, and recommending the election of county delegates to a convention, whose object was not precisely defined; but which *looked* like a plan for separating from the East and erecting an independent government west of the mountains. At this juncture the intelligence arrived of the recall of Genet and the disavowal of his acts by the French republic, although in truth he had but conformed with their *secret* instructions. This ended the project.

About this period the Spanish authorities attempted an intrigue with Wilkinson, Sebastian, Innis, and Nicholas, all prominent men of Kentucky. From 1787, when Wilkinson made his first trip to New Orleans, until he took part in the Indian war in 1791, he held constant intercourse with the Spanish provinces; but whether his plans reached only so far as to form a commercial treaty with those provinces that would secure the navigation of the Mississippi to the West, or contemplated a disunion of the West from the East, is yet in doubt. He, however, in 1808 and again in 1811, was tried before a court martial on charge of having received a pension from Spain in consideration of his turning traitor and effecting a disunion of the States, but was triumphantly acquitted.

In the summer of 1797, Thomas Powers, agent for Carondelet, Governor of the Spanish provinces, came to Kentucky from Louisiana, and sent a communication to Sebastian for his consideration, and that of Nicholas, Innis, Murray, and others whom they might see fit to consult upon the subject. This paper embodied a plan by which the West was to rebel and declare its independence of the Union, and form a government wholly independent of the Atlantic States. The sum of two hundred thousand dollars, twenty field pieces, and other munitions of war, were supplied by his Catholic

Majesty. Fort Massac was to be seized instantly, and the federal troops to be dispossessed of all posts upon the western waters. In the event of their success in establishing a new government, that of Spain was to grant them especial commercial privileges, and the idea was held out that that government would not respect the treaty of 1795, which gave to the United States the free navigation of the Mississippi. Innis and Nicholas replied coldly to these overtures. It is not known whether Sebastian signed this reply; but it was proved afterward, in 1806, before the Kentucky Legislature, that he had for years received a pension of two thousand dollars from the Spanish government, and he was considered guilty of holding treasonable intercourse with her agents.

THE WHISKY INSURRECTION.

In the year 1791, Congress enacted laws laying duties upon spirits distilled in the United States, and upon stills. From the very commencement of the operation of these laws, combinations were formed in the four western counties of Pennsylvania to defeat them, and violences were repeatedly committed. The western insurgents followed, as they supposed, the example of the American revolution in opposing an excise law. Distilling was then considered a reputable business, and was very extensively carried on in Western Pennsylvania. Rye, their principal crop, was too bulky to transport across the mountains; therefore, having no market for it, they were obliged to convert it into the more easily transported article of whisky, which was their principal item to pay for their salt, sugar, and iron. They had cultivated their lands for years, at the peril of their lives, with little or no protection from the federal government, and when at last they were enabled to raise a little surplus grain to meet their expenses of living, they were met by a law which forbade them doing as they pleased with the fruits of their labors. In effect it was as bad as a government tax on wheat would be at the present day to the western farmer.

The indignation of the people at this law was universal. Public meetings were held, composed of the most influential men, denouncing the law, and resolutions passed recommending the public to treat all persons, holding the office of collector of the tax, with contempt. The tax collectors were subjected to all sorts of indignities from the populace. In September, 1791, Robert Johnson, the collector for Alleghany and Washington, was waylaid, dragged from his horse, his hair cut off, and he was tarred and feathered. The officer sent to serve the process against these offenders was treated in a similar manner. The next month a man named Wilson was torn from his bed by persons in disguise, carried several miles to a blacksmith's shop, stripped naked, burnt with a red-hot iron, and covered with a coat of tar and feathers.

Not long after, one Rosebury was tarred and feathered for speaking in favor of the law.

Congress in May, 1792, passed material modifications to the law, but all to no purpose. The excitement increased, not only were collectors visited with violence, but those distillers who complied with the law. The adversaries of the law went so far as to burn the barns and tear down the houses of the collectors and others, and threaten with death those who should disclose their names. So strong was the public feeling that one word in favor of the law was enough to ruin any man. It was considered as a badge of toryism. No clergyman, physician, lawyer, nor merchant was sustained by the people unless his sentiments were in opposition.

On the 16th of July, 1794, a band of about forty individuals attacked the mansion of Gen. John Neville, chief inspector of Western Pennsylvania, situated seven miles southwest of Pittsburgh. It was defended by Major Kirkpatrick, with eleven men from the garrison at Pittsburgh. The attack was previously made with small arms, and fire having been set to the house the garrison was obliged to surrender. One of the insurgents was killed.

Gen. Neville was one of the most zealous patriots of the revolution, and a man of great wealth and unbounded benevolence. During the "starving years" of the early settlements in that region, he had largely contributed to the necessities of the suffering pioneers; and when necessary, he had divided his last loaf with the needy. In accepting the office he was governed by a sense of public duty. It was done at the hazard of his life and the loss of all his property. All his revolutionary services and his great popularity were insufficient to shield him from public indignation, and his hospitable mansion was consumed to ashes in the presence of hundreds who had shared his bounty or had enjoyed his benevolence.

Insubordination everywhere prevailed; all law was disregarded; the peaceable members of society became obnoxious to the mob and their adherents; the mail was boldly robbed, and disclosed letters which added new victims to the lawless rage; the United States marshal was compelled to escape for his life down the Ohio.

At length, so dangerous had become the state of affairs, that President Washington, on the 7th August (1794) issued a proclamation, commanding the insurgents to disperse, and warning all persons against abetting, aiding, or comforting the perpetrators of these treasonable acts, and requiring all officers and other citizens, according to their respective duties and the laws of the land, to exert their utmost endeavors to prevent and suppress such dangerous proceedings.

Washington having ordered out fifteen thousand militia from the adjoining States, proceeded in October to Bedford, whence he gave out instructions to Gen. Lee, of Virginia, who marched his troops to Pittsburgh. On their approach the insurgents were awed into submission to the law. In the spring succeeding a part of the

military, who had remained at Pittsburgh through the winter under Gen. Morgan, returned: order had been fully restored, and the law acquiesced in. Some of the insurgents were imprisoned for nearly a year.

FRONTIER DESPERADOES.

THERE are two states of society perhaps equally bad for the promotion of good morals and virtue—the densely populated city and the wilderness. In the former, a single individual loses his identity in the mass, and being unnoticed is without the view of the public, and can, to a certain extent, commit crimes with impunity. In the latter, the population is sparse, and the strong arm of the law not being extended over him, his crimes are, in a measure, unobserved, or if so, frequently the power is wanting to bring him to justice. Hence both are the resort of desperadoes.

In the early settlement of the West, the borders were infested with desperadoes flying from justice, suspected or convicted felons escaped from the grasp of the law, who sought safety in the depth of the forest. The counterfeiter and the robber found there a secure retreat or a new theater for crime.

While St. Louis was under Spanish dominion, in the latter part of the last century, the intercourse with New Orleans was at one time rendered very dangerous, by a very large band of robbers, under the command of two desperadoes by the names of Culbert and Magilbray, who, stationing themselves at a certain point on the Mississippi, carried on a regular and extensive system of piracy.

In the year 1787, a barge richly laden left New Orleans, bound for St. Louis. At Beausoliel's Island the robbers boarded the vessel, and ordered the crew below, with the owner, Mr. Beausoliel, among them. His whole fortune was in the barge, and now that he was to be deprived of it, he was in agony. But all was saved to him through the heroic daring of a negro, one of the crew. The negro Cacasotte was short and slender, but exceedingly strong and active, and the peculiar characteristics of the race had in him given place to features of exceeding grace and beauty. As soon as the robbers had taken possession, Cacasotte appeared overjoyed. He danced, sang, laughed, and soon induced them to believe that his ebullitions of pleasure arose from their having liberated him from irksome slavery. His constant attention to their smallest wants won their confidence, and he alone was permitted to roam unmolested and unwatched through the vessel.

Having thus far effected his object, he seized the first opportunity to speak to Mr. Beausoliel, and beg permission to rid him of his dangerous intruder. He laid his plan before his master, who, with a good deal of hesitation, acceded to it. Cacasotte was cook, and it was agreed between him and his fellow-conspirators,

likewise two negroes, that the signal for dinner should be the signal for action. When the hour arrived, the robbers assembled in considerable numbers on the deck, and stationed themselves on the bow and stern, and along the sides, to prevent any rising of the men. Cacasotte went among them with the most unconcerned look and demeanor imaginable. As soon as his comrades had taken their assigned stations, he placed himself at the bow, near one of the robbers, a stout, herculean fellow, who was armed cap-a-pie. Cacasotte gave the preconcerted signal, and immediately the robber near him was struggling in the water. With the speed of lightning he ran from one robber to another, as they were sitting on the sides of the boat, and in a few seconds' time had thrown several of them overboard. Then seizing an oar, he struck on the head those who had attempted to save themselves by grappling the running boards; then shot with rifles that had been dropped on deck those who swam away. In the meantime, his comrades had done almost as much execution as their leader. The deck was soon cleared, and the robbers who remained below were too few to offer any resistance. But as these did not comprise all the band, they continued their depredations until the next year, when they were broken up, and all kinds of valuable merchandise, the fruits of their depredations, were found on the island.

About the year 1800, a person by the name of Mason became an audacious depredator. He dwelt for awhile in the Cave-in-the-Rock, on the Ohio. This noted cavern is about twenty miles below the mouth of the Wabash, and presents itself to view a little above high-water mark, close to the bank of the river. It is about two hundred feet long, eighty wide, and twenty-five in height. The floor is level through the whole length of the center, the sides rising in strong grades, in the manner of the seats in the pit of a theater. It is a great curiosity, being connected by another, still more gloomy, which is situated exactly above. They are united by an aperture of about fourteen feet, which to ascend is like passing up a chimney, while the top of the mountain is yet far above.

Mason was a man of more than ordinary talents, of gigantic stature, and was both a land and water pirate, infesting the rivers and the woods, and robbing all who fell in his way. Sometimes he plundered the descending boats; but more frequently preferred to wait and plunder the owners of their money as they returned. The rapid advance of population led him to desert the Cave-in-the-Rock, and he began to infest the great route through the Indian nation, known to travelers as the "Natchez and Nashville Trace," where he soon became the terror of every peaceful traveler through the wilderness. Associated with him were his two sons, and a few other desperate miscreants; and the name of Mason and his band was known and dreaded from the morasses of the southern frontier to the silent shades of the Tennessee. The outrages of

Mason became more frequent and sanguinary. One day found him marauding on the banks of the Pearl, against the life and fortune of the trader; and before pursuit was organized, the hunter, attracted by the descending sweep of the solitary vulture, learned another story of robbery and murder on the remote shores of the Mississippi. Their depredations at last became so frequent and daring, that Governor Claiborne, of the Mississippi Territory, offered a liberal reward for his capture, dead or alive! But such was the knowledge of the wilderness possessed by the wily bandit, and such his untiring vigilance and activity, that for a time he baffled every effort for his capture.

Treachery at last succeeded where stratagem, enterprise and courage had failed. Two of his band, tempted by the large reward, concerted a plan to obtain it. Watching their opportunity, when Mason was counting out his ill-gotten plunder, the conspirators came behind him, struck a tomahawk into his brains, cut off his head, carried it to Washington, then the seat of the territorial government, and claimed the reward. Ere it was paid to them, a vast assemblage gathered from all the country adjacent to view the grim and ghastly head of the robber-chief, which was identified by many, from certain marks and scars. Among these were two young men, who recognized the conspirators as part of the gang by which they had been robbed. Upon their evidence, their treachery met its reward; for they were arrested, imprisoned, tried, condemned and executed. The band being thus deprived of their leader and two of its most efficient men, dispersed and fled the country.

At a later period, the celebrated counterfeiter, Sturdevant, fixed his residence in Illinois, on the Ohio, and for several years set the laws at defiance. He was a man of talent and address, possessed mechanical genius, was an expert artist, was skilled in some of the sciences, and excelled as an engraver. For several years he resided in a secluded spot, where all his immediate neighbors were his confederates, or persons whose friendship he had conciliated. At any time, by the blowing of a horn, he could summon from fifty to a hundred armed men to his defense, while the few quiet farmers around, who lived near enough to get their feelings interested, and who were really not at all implicated in his crimes, rejoiced in the impunity with which he practiced his schemes. He was a grave, quiet, inoffensive man in his manners, who commanded the obedience of his comrades and the respect of his neighbors. He had a very excellent farm; his house was one of the best in the country; his domestic arrangements were liberal and well ordered. Yet this man was the most notorious counterfeiter that ever infested our country, and carried on his nefarious art to an extent which no other person has ever attempted. His confederates were scattered over the whole western country, receiving through regular channels of intercourse their regular supplies of counterfeit bank-notes, for which they paid him a stipulated

price—sixteen dollars in cash for one hundred in counterfeit bills.

His security arose partly from his caution in not allowing his subordinates to pass a counterfeit bill, or do any other unlawful act in the State in which he lived, and in his obliging them to be especially careful of their deportment in the *county* of his residence; measures which effectually protected him from the civil authority; for although all the counterfeit bank-notes with which a vast region was inundated were made in his house, that fact never could be proved by legal evidence.

But he became a great nuisance, from the immense quantity of spurious paper which he threw into circulation; and although personally he never committed any acts of violence, and is not known to have sanctioned any, the unprincipled felons by whom he was surrounded, were guilty of many acts of desperate atrocity; and Sturdevant, though he escaped the arm of the law, was at last with all his confederates driven from the country by the enraged people, who rose almost in mass, to rid themselves of one whose presence they had long considered an evil and a disgrace.

The *Lynch Law*, as it is termed, originated in Virginia at the time of the American Revolution, and was first adopted by Colonel Lynch against a lawless band of tories and desperadoes, who infested the country at the base of the Blue Ridge. This plan was afterward followed in the West, and its operation was salutary in ridding the country of miscreants when the law was not strong enough to punish. The tribunal of *Squire Birch*, as the person who personated the judge was called, was established under a tree in the woods; the culprit being usually found guilty, was tied to a tree and lashed without mercy, and then expelled from the country. In general "*the regulators*" only exercised this law upon the most base and vile characters.

In the fall of the year 1801 or 1802, a company consisting of two men and three women arrived in Lincoln county, Kentucky, and encamped about a mile from the present town of Stanford. The appearance of the individuals composing this party was wild and rude in the extreme. The one who seemed to be the leader of the band, was above the ordinary stature of men. His frame was bony and muscular, his breast broad, his limbs gigantic. His clothing was uncouth and shabby, his exterior weatherbeaten and dirty, indicating continual exposure to the elements, and designating him as one who dwelt far from the habitations of men, and mingled not in the courtesies of civilized life. His countenance was bold and ferocious, and exceedingly repulsive, from its strongly marked expression of villiany. His face, which was larger than ordinary, exhibited the lines of ungovernable passion, and the complexion announced that the ordinary feelings of the human breast were in him extinguished. Instead of the healthy hue which indicates the social emotions, there was a livid unnatural redness, resembling that of a dried and lifeless skin. His eye was

fearless and steady, but it was also artful and audacious, glaring upon the beholder with an unpleasant fixedness and brilliancy, like that of a ravenous animal gloating on its prey. He wore no covering on his head, and the natural protection of thick coarse hair, of a fiery redness, uncombed and matted, gave evidence of long exposure to the rudest visitations of the sunbeam and the tempest. He was armed with a rifle, and a broad, leathern belt, drawn closely around his waist, supported a knife and a tomahawk. He seemed, in short, an outlaw, destitute of all the nobler sympathies of human nature, and prepared at all points for assault or defense. The other man was smaller in size than him who led the party, but similarly armed, having the same suspicious exterior, and a countenance equally fierce and sinister. The females were coarse, and wretchedly attired.

The men stated in answer to the inquiry of the inhabitants, that their names were Harpe, and that they were emigrants from North Carolina. They remained at their encampment the greater part of two days and a night, spending the time in rioting, drunkenness, and debauchery. When they left they took the road leading to Green River. The day succeeding their departure, a report reached the neighborhood that a young gentleman of wealth from Virginia, named Lankford, had been robbed and murdered on what was then called, and is still known as the "Wilderness Road," which runs through the Rockcastle hills. Suspicion immediately fixed upon the Harpes as the perpetrators, and Captain Ballinger, at the head of a few bold and resolute men, started in pursuit. They experienced great difficulty in following their trail, owing to a heavy fall of snow, which had obliterated most of their tracks, but finally came upon them while encamped in a bottom on Green River, near the spot where the town of Liberty now stands. At first they made a show of resistance, but upon being informed that if they did not immediately surrender, they would be shot down, they yielded themselves prisoners. They were brought back to Stanford, and there examined. Among their effects were found some fine linen shirts, marked with the initials of Lankford. One had been pierced by a bullet and was stained with blood. They had also a considerable sum of money in gold. It was afterward ascertained that this was the kind of money Lankford had with him. The evidence against them being thus conclusive, they were confined in the Stanford jail, but were afterward sent for trial to Danville, where the District Court was in session. Here they broke jail and succeeding in making their escape.

They were next heard of in Adair county, near Columbia. In passing through that county they met a small boy, the son of Col. Trabue, with a pillow-case of meal or flour, an article they probably needed. This boy it is supposed they robbed and then murdered, as he was never afterward heard of. Many years afterward human bones, answering the size of Colonel Trabue's son at the

time of his disappearance, were found in a sink hole near the place where he was said to have been murdered. The Harpes still shaped their course toward the mouth of Green River, marking their path by murders and robberies of the most horrible and brutal character. The district of country through which they passed was at that time very thinly settled, and from this reason their outrages went unpunished. They seemed inspired with the deadliest hatred against the whole human race, and such was their implacable misanthropy that they were known to kill where there was no temptation to rob. One of their victims was a little girl, found at some distance from her home, whose tender age and helplessness would have been protection against any but incarnate fiends. The last dreadful act of barbarity, which led to their punishment and expulsion from the country, exceeded in atrocity all the others.

Assuming the guise of Methodist preachers, they obtained lodgings one night at a solitary house on the road. Mr. Stagall, the master of the house, was absent, but they found his wife and children and a stranger, who, like themselves, had stopped for the night. Here they conversed and made inquiries about the two noted Harpes who were represented as prowling about the country. When they retired to rest they contrived to secure an ax, which they carried with them into their chamber. In the dead of night they crept softly down stairs, and assassinated the whole family, together with the stranger, in their sleep, and then setting fire to the house, made their escape. When Stagall returned he found no wife to welcome him; no home to receive him. Distracted with grief and rage, he turned his horse's head from the smouldering ruins, and repaired to the house of Captain John Leeper. Leeper was one of the most powerful men of his day, and fearless as powerful. Collecting four or five other men well armed, they mounted and started in pursuit of vengeance. It was agreed that Leeper should attack "Big Harpe," leaving "Little Harpe" to be disposed of by Stagall. The others were to hold themselves in readiness to assist Leeper and Stagall, as circumstances might require.

This party found the women belonging to the Harpes attending to their little camp by the roadside; the men having gone aside into the woods to shoot an unfortunate traveler of the name of Smith, who had fallen into their hands, and whom the women had begged might not be dispatched before their eyes. It was this halt that enabled the pursuers to overtake them. The women immediately gave the alarm, and the miscreants mounting their horses, which were large, fleet, and powerful, fled in separate directions. Leeper singled out the Big Harpe, and being better mounted than his companions, soon left them far behind. Little Harpe succeeded in escaping from Stagall, and he with the rest of his companions turned and followed on the track of Leeper and the Big Harpe. After a chase of about nine miles, Leeper came within gunshot of the latter and fired. The ball, entering his thigh, passed through

it and penetrated his horse, and both fell. Harpe's gun escaped from his hand and rolled some eight or ten feet down the bank. Reloading his rifle, Leeper ran to where the wounded outlaw lay weltering in his blood, and found him with one thigh broken and the other crushed beneath his horse. Leeper rolled the horse away and set Harpe in an easier position. The robber begged that he might not be killed. Leeper told him that he had nothing to fear from him, but that Stagall was coming up and could not probably be restrained. Harpe appeared very much frightened at hearing this and implored Leeper to protect him. In a few moments Stagall appeared, and without uttering a word, raised his rifle and shot Harpe through the head. They then severed the head from the body, and stuck it upon a pole where the road crosses the creek, from which the place was then named and is yet called *Harpe's Head*. Thus perished one of the boldest and most noted freebooters that has ever appeared in America. Save courage, he was without one redeeming quality, and his death freed the country from a terror which had long paralyzed its boldest spirits.

The Little Harpe afterward joined the band of Mason, and became one of his most valuable assistants in the dreadful trade of robbery and murder. He was one of the two bandits that, tempted by the reward for their leader's head, murdered him, and eventually themselves suffered the penalty of the law as previously related.

PURCHASE OF LOUISIANA.

IN 1763, Louisiana was ceded to Spain, and by a secret article in the treaty of St. Ildefonso, concluded in 1800, that power ceded it back to France. Napoleon, however, wished to keep this cession secret until he should have—as he hoped to do—reduced St. Domingo to submission. Failing in this, he was rendered indifferent to his new acquisition. In January, 1803, he sent out Laussat as prefect of the colony, which was the first intimation that the inhabitants had of the transfer which gave them great joy.

On being informed of this retrocession, President Jefferson had dispatched instructions to Robert Livingston, the American minister at Paris, to represent to the First Consul that the occupation of New Orleans by France would endanger the friendly relations between the two nations, and perhaps even oblige the United States to make common cause with England; as the possession of this city by the former, by giving her the command of the Mississippi, the only outlet to the produce of the Western States, and also of the Gulf of Mexico, so important to American commerce, would render it almost certain that the conflicting interests of the two nations would lead to an open rupture. Mr. Livingston was, therefore, instructed not only to insist upon the free navigation of

the Mississippi, but to negotiate for the acquisition of New Orleans itself and the surrounding territory, and Mr. Monroe was appointed with full powers to assist him in the negotiation.

Bonaparte, who always acted promptly, soon came to the conclusion that what he could not defend he had better dispose of on the best terms; but before deciding, he summoned two of his ministers in council, on the 10th of April, 1803, and thus addressed them:

"I am fully sensible of the value of Louisiana, and it was my wish to repair the error of the French diplomatists who abandoned it in 1763. I have scarcely recovered it before I run the risk of losing it; but if I am obliged to give it up, it shall hereafter cost more to those who force me to part with it than to those to whom I yield it. The English have despoiled France of all her northern possessions in America, and now they covet those of the South. I am determined that they shall not have the Mississippi. Although Louisiana is but a trifle compared to their vast possessions in other parts of the globe, yet, judging from the vexation they have manifested on seeing it return to the power of France, I am certain that their first object will be to gain possession of it. They will probably commence the war in that quarter. They have twenty vessels in the Gulf of Mexico, and our affairs in St. Domingo are daily getting worse since the death of Le Clerc. The conquest of Louisiana might be easily made, and I have not a moment to lose in putting it out of their reach. I am not sure but what they have already begun an attack upon it. Such a measure would be in accordance with their habits; and in their place I should not wait. I am inclined, in order to deprive them of all prospect of ever possessing it, to cede it to the United States. Indeed, I can hardly say that I cede it, for I do not yet possess it; and if I wait but a short time, my enemies may leave me nothing but an empty title to grant to the republic I wish to conciliate. They only ask for one city of Louisiana, but I consider the whole colony as lost; and I believe that in the hands of this rising power it will be more useful to the political and even the commercial interests of France, than if I should attempt to retain it. Let me have both your opinions on the subject."

One of the ministers, Barbe Marbois, fully approved of the cession, but the other opposed it. They debated the matter for a long time, and Bonaparte concluded the conference without making his determination known. The next day, however, he sent for Marbois, and said to him:

"The season for deliberation is over: I have determined to renounce Louisiana. I shall give up not only New Orleans, but the whole colony, without reservation. That I do not undervalue Louisiana I have sufficiently proved, as the object of my first treaty with Spain was to recover it. But, though I regret parting with it, I am convinced it would be folly to persist in trying to keep it. I commission you, therefore, to negotiate this affair with the envoys of the United States. Do not wait the arrival of Mr. Monroe, but

go this very day and confer with Mr. Livingston. Remember, however, that I need ample funds for carrying on the war, and I do not wish to commence it by levying new taxes. For the last century France and Spain have incurred great expense in the improvement of Louisiana, for which her trade has never indemnified them. Large sums have been advanced to different companies, which have never returned to the treasury. It is fair that I should require repayment for these. Were I to regulate my demands by the importance of this territory to the United States, they would be unbounded; but, being obliged to part with it, I shall be moderate in my terms. Still, remember, I must have fifty millions of francs, and I will not consent to take less. I would rather make some desperate effort to preserve this fine country."

The negotiations commenced that very day. Mr. Monroe arrived at Paris on the 12th of April, and the two representatives of the United States, after holding a private conference, announced that they were ready to treat for the cession of the entire territory, which at first Mr. Livingston had hesitated to do, believing the proposal of the First Consul to be only a device to gain time.

On the 30th of April, 1803, the treaty was signed. The United States were to pay fifteen million dollars for their new acquisition, and be indemnified for some illegal captures; while it was agreed that the vessels and merchandise of France and Spain should be admitted into all the ports of Louisiana free of duty for twelve years.

Bonaparte stipulated in favor of Louisiana that it should as soon as possible be incorporated into the Union, and that its inhabitants should enjoy the same rights, privileges, and immunities as other citizens of the United States; and the third article of the treaty, securing to them these benefits, was drawn up by the First Consul himself, who presented it to the plenipotentiaries with these words:

"Make it known to the people of Louisiana that we regret to part with them; that we have stipulated for all the advantages they could desire; and that France, in giving them up, has insured to them the greatest of all. They could never have prospered under any European government as they will when they become independent. But, while they enjoy the privileges of liberty, let them ever remember that they are French, and preserve for their mother-country that affection which a common origin inspires."

The completion of this important transaction gave equal satisfaction to both parties. "I consider," said Livingston, "that from this day the United States takes rank with the first powers of Europe, and now she has entirely escaped from the power of England;" and Bonaparte expressed a similar sentiment in these words: "By this cession of territory I have secured the power of the United States, and given to England a maritime rival, who at some future time will humble her pride." These words appeared

prophetic when the troops of Britain, a few years after, met so signal an overthrow on the plains of Louisiana.

The boundaries of the colony had never been clearly defined, and one of Bonaparte's ministers drew his attention to this obscurity. "No matter," said he, "if there was no uncertainty, it would, perhaps, be good policy to leave some;" and, in fact, the Americans, interpreting to their own advantage this uncertainty, some few years after seized upon the extensive territory of Baton Rouge, which was in dispute between them and the Spaniards.

On the 30th of November, 1803, Laussat took possession of the country, when Casa Calvo and Salcedo, the Spanish commissioners, presented to him the keys of the city, over which the tri-colored flag floated but for the short space of twenty days. The colony had been under the rule of Spain for a little more than thirty-four years.

On the 20th of December, in the same year, General Wilkinson and Claiborne, who were jointly commissioned to take possession of the country for the United States, made their entry into New Orleans at the head of the American troops. Laussat gave up his command, and the star-spangled banner supplanted the tri-colored flag of France.

The purchase of Louisiana, which gave the United States their sole claim to the vast territory west of the Mississippi, extending on the north through Oregon to the Pacific, and further south to the Mexican dominions, was the most important event to the Nation which has occurred in this century. From that moment, the interest of the whole people of the Mississippi valley became as one, and its vast natural resources began to be rapidly developed. So great are they that it is destined to become the center of American power—"the mistress of the world."

INTERESTING NARRATIVE.

OUR story will carry the reader back a little more than sixty years. Then all north of the Ohio River was an almost unbroken wilderness, the mysterious red man's home. On the other side a bold and hardy band from beyond the mountains, had built their log cabins and were trying to subdue the wilderness. To them every hour was full of peril. The Indians would often cross the river, steal their children and horses and kill and scalp any victim who came in their way. They worked in the field with weapons at their side, and on the Sabbath met in the grove or the rude log church to hear the word of God with their rifles in their hands.

To preach to these settlers, Mr. Joseph Smith, a Presbyterian minister, had left his parental home east of the mountains. He, it was said, was the second minister who had crossed the Monon-

gahela River. He settled in Washington County, Pennsylvania, and became the pastor of the Cross Creek and Upper Buffalo congregations, dividing his time between them. He found them a willing and united people, but still unable to pay him a salary which would support his family. He in common with all the early ministers, must cultivate a farm. He purchased one on credit, proposing to pay for it with the salary pledged him by his people. Years passed away; the pastor was unpaid. Little or no money was in circulation. Wheat was abundant, but there was no market. It could not be sold for more than twelve and a half cents cash. Even their salt had to be brought across the mountains on pack horses—was worth eight dollars per bushel, and twenty-one bushels of wheat were often given for one of salt.

The time came when the last payment must be made, and Mr. Smith was told he must pay or leave his farm. Three years' salary was now due from his people. From the want of this, his land, his improvements upon it, and his hopes of remaining among a beloved people must be abandoned. The people were called together and the case laid before them. They were greatly moved. Counsel from on high was sought. Plan after plan was proposed and abandoned. The congregations were unable to pay a tithe of their debts, and no money could be borrowed.

In despair, they adjourned to meet again the following week. In the meantime, it was ascertained that a Mr. Moore, who owned the only mill in the country, would grind wheat for them on moderate terms. At the next meeting, it was resolved to carry their wheat to Mr. Moore's mill. Some gave fifty bushels, some more. This was carried from fifteen to twenty-five miles on horses to the mill.

In a month, word came that the flour was nearly ready to go to market. Again the people were called together. After an earnest prayer, the question was asked, who will run the flour to New Orleans? This was a startling question. The work was perilous in the extreme. Months must pass before the adventurer could hope to return, even though his journey should be fortunate. Nearly all the way was a wilderness. And gloomy tales had been told of the treacherous Indians. More than one boat's crew had gone on that journey and came back no more.

Who then would endure the toil and brave the danger? None volunteered. The young shrunk back, and the middle-aged had their excuse. Their last scheme seemed likely to fail. At length a hoary-headed man, an elder in the church, sixty-four years of age, arose, and to the astonishment of the assembly said, "Here am I, send me." The deepest feeling at once pervaded the whole assembly. To see their venerated old elder thus devote himself for their good, melted them all to tears. They gathered around old Father Smiley to learn that his resolution was indeed taken; that rather than lose their pastor, he would brave danger, toil, and even death. After some delay and trouble, two young men were

BOONE'S FIRST VIEW OF KENTUCKY.

"Here from the top of an eminence, Boone and his companions first beheld a distant view of the beautiful lands of Kentucky. The plains and forests abounded with wild beasts of every kind; deer and elk were common; the buffalo were seen in herds, and the plains covered with the richest verdure."

"Fair was the scene that lay
Before the little band,
Which paused upon its toilsome way,
To view this new-found land.

Field, stream and valley spread,
Far as the eye could gaze,
With summer's beauty o'er them shed,
And sunlight's brightest rays.

Flowers of the fairest dye,
Trees clothed in richest green;
And brightly smiled the deep blue skies
O'er this enchanting scene.

Such was Kentucky then,
With wild luxuriance blest;
Where no invading hand had been,
The Garden of the West."

induced, by hope of a large reward, to go as his assistants. A day was appointed for starting. The young and old, from far and near, from love to Father Smiley, and their deep interest in the object of his mission, gathered together, and with their minister came down from the church, fifteen miles away to the bank of the river, to bid the old man farewell. Then a prayer was offered by their pastor. A parting hymn was sung. Then said the old man: "Untie the cable, and let us see what the Lord will do for us." This was done, and the boat floated slowly away.

More than nine months passed, and no word came back from Father Smiley. Many a prayer had been breathed for him, but what had been his fate was unknown. Another Sabbath came. The people came together for worship, and there on his rude bench before the preacher sat Father Smiley. After the services, the people were requested to meet early in the week to hear the report. All came again. After thanks had been rendered to God for his safe return, Father Smiley arose and told his story. That the Lord had prospered his mission; that he had sold his flour for twenty-seven dollars per barrel, and then got safely back. He then drew a large purse, and poured upon the table a larger pile of gold than most of the spectators had ever seen before. Thus their debts were paid, their pastor relieved, and while life lasted, he broke for them the bread of life. The bones of both pastor and elder have long reposed in the same church-yard, but a grateful posterity still tell this pleasing story of the past.

STRANGE MENTAL AND PHYSICAL PHENOMENA.

ABOUT the commencement of the present century, the religious meetings of the West were attended by singular mental and physical phenomena, resembling somewhat, in some of their phases, the mesmeric phenomena of our day. They were not exclusively confined to any one denomination, or those who have been considered the most excitable and enthusiastic; for even the phlegmatic New England Presbyterians of the Reserve came under their influence.

They, however, exhibited themselves with greater power at the earlier forest gatherings of the Methodists. On those occasions, the feelings and mental exercises were contagious, and often spread like an epidemic through a congregation, hundreds being involuntarily smitten down. They could not be accounted for by any known laws of our mental organization, and therefore were ascribed to a supernatural agency.

A clerical writer classifies their different manifestations respectively as "the Falling," "the Jerking," "the Rolling," "the Dancing," and "the Barking" Exercises, together with "Visions and Trances."

The last named was the most common affection. In this the subject was thrown into a state of ecstasy or mental revery, attended with the loss of all muscular power, and consciousness of external relations or objects, similar to a protracted catalepsy. Yet the mind appeared wholly absorbed in delightful contemplations, which often lighted up the countenance with a rapturous, angelic expression. This condition continued from a few hours to two days, during which there was an entire suspension of all the animal and voluntary functions.

The most singular and alarming of those affections was "the Jerking Exercise," which, although common to both sexes, was more frequent in vigorous, athletic men.

The first recorded instance of its occurrence was at a sacrament in East Tennessee, when several hundred of both sexes were seized with this strange and involuntary contortion. The subject was instantaneously seized with spasms or convulsions in every muscle, nerve and tendon. His head was thrown or jerked from side to side with such rapidity, that it was impossible to distinguish his visage, and the most lively fears were awakened lest he should dislocate his neck, or dash out his brains. His body partook of the same impulse, and was hurried on by like jerks over every obstacle—fallen trunks of trees, or, in a church, over pews and benches, apparently to the most imminent danger of being bruised and mangled. It was useless to attempt to hold or restrain him, and the paroxysm was permitted gradually to exhaust itself. An additional motive for leaving him to himself, was the superstitious notion that all attempt at restraint was resisting the spirit of God.

The first form in which these spasmodic contortions made their appearance, was that of a simple jerking of the arms from the elbows downward. The jerk was very quick and sudden, and followed with short intervals. This was the simplest and most common form, but the convulsive motion was not confined to the arms; it extended in many instances to other parts of the body. When the joint of the neck was affected, the head was thrown backward and forward with a celerity frightful to behold, and which was impossible to be imitated by persons who were not under the same stimulus. The bosom heaved, the countenance was disgustingly distorted, and the spectators were alarmed lest the neck should be broken. When the hair was long, it was shaken with such quickness, backward and forward, as to crack and snap like the lash of a whip, so as to be frequently heard twenty feet. Sometimes the muscles of the back were affected, and the patient was thrown down on the ground, when his contortions for some time resembled those of a live fish cast from its native element on the land.

From the universal testimony of those who have described these spasms, they appear to have been wholly involuntary. This remark is applicable also to all the other bodily exercises. What demonstrates satisfactorily their involuntary nature, is not only

that, as above stated, the twitches prevailed in spite of resistance, and even more for attempts to suppress them, but that wicked men would be seized with them while sedulously guarding against an attack, and cursing every jerk when made. Travelers on their journey, and laborers at their daily work, were also liable to them.

LIFE AMONG THE EARLY SETTLERS OF THE WEST.

MORE than three centuries since (in 1541) the Spanish cavalier, De Soto, on a wild, romantic expedition in search of gems and precious metals, discovered the Mississippi—the mighty artery of the West. In the next century the adventurous French Jesuits founded missions on the great lakes of the North. One of their number, Father Marquette, in 1673, leaving their westernmost stations far behind, crossed the country through unknown nations and became the first white man whose eyes had ever rested upon the upper portion of the “great stream.” Just one hundred and forty-one years after its discovery, A. D. 1682, the chivalric La Salle explored it to the sea, and with great pomp took possession of the country in the name of the French monarch. For three-quarters of a century thereafter, the Great West was claimed as part of the dominions of France: French fur traders penetrated to its remote regions, and French settlements and missions here and there arose in the western forests as points of civilization among savage wilds.

The borderers of Virginia and the Carolinas, about the year 1756, first crossed the Alleghanies into what is now Southwestern Virginia and Tennessee. The smoke from the cabins of Anglo-Saxons then, for the first time, curled up in the western valleys. Their stay was brief. The impulsive Cherokees drove back the intruders, and the Anglo-Saxon remained on the eastern side of the mountains until the peace of 1763 removed all danger of French instigation. Then the same borderers, with others of Maryland and Southern Pennsylvania, again crossed the Alleghanies.

In their respective routes they observed the general law of emigrants of the present day, of advancing westward on the same parallel of latitude with that of their nativity. Thus Tennessee was mainly settled by Carolinians; Kentucky by Virginians, Southern Pennsylvanians, and Marylanders; the central and southern parts of Ohio, Indiana, and Illinois from the Middle States; while those from colder regions, found appropriate homes in the northern parts of Ohio, Indiana and Illinois, and in Michigan, Wisconsin, and Iowa. Each sought to secure a climate similar to that in which they had been bred—one adapted to the cultivation of those productions to which they had been accustomed. Thus the Tennessean raises cotton, the staple of the mother State, Carolina; the Kentuckian grows the Virginian weed; and away in the far north-

west, in Minnesota, the hardy emigrant from Maine, as the strokes of his ax echo through the woods with a familiar sound, finds his native element in converting those broad forests into lumber.

This consummation has not been effected until the present time; yet, before the commencement of the American Revolution, permanent settlements had been made in Tennessee, Kentucky, and Western Virginia and Western Pennsylvania, in the region of the Upper Ohio.

The first New England settlement in the West was not founded until many years later, in 1788, when that at Marietta was commenced. That point and vicinity continued to remain the only settlement of these people until subsequent to Wayne's treaty in 1795. Over a quarter of a century elapsed after the Virginians had obtained a permanent foothold west of the mountains, ere the Western Reserve, in Northern Ohio, became the first considerable point of New England emigration in the West. Unlike the early settlers of the regions farther south, they followed almost exclusively the unexciting pursuits of agriculture. Coming after the long Indian wars had closed, such characters as Boone, Kenton, and Whetzel had no corresponding type among them. Laying broad the foundations for religious and intellectual culture, the church and the schoolhouse soon arose among them, exact counterparts of those on the banks of the smooth gliding Connecticut.

These remarks will not apply to the settlers at and around Marietta, who shared to the full in the vicissitudes of Indian warfare, and who had among them some not excelled by any as backwoods hunters, or in skill and finesse, when opposed to their forest-bred enemies. And what is more, that little settlement was composed of an unusually large proportion of polished men of high elevation of sentiment, who having served as officers in the armies of the revolution, had beggared themselves in the service of their country, and were thus compelled to endeavor to retrieve their ruined fortunes in the wilds of the West.

We observe in this connection that two prominent obstacles opposed the first settlement of the West by the people of New England. First, The State of New York, then mostly a wilderness, was on *their* border, and for awhile formed a receptacle for their emigrating population. Second, The part of the West first opened to emigration was too far south of their latitude; but as soon as a portion of Northern Ohio was ceded by the Indians at Wayne's treaty, then the enterprise of New England forthwith availed itself of the first opening in a congenial direction.

The lives of the pioneers of Kentucky, Tennessee, and Western Pennsylvania, and Western Virginia, were more poetical and romantic. The spirit of adventure allured them into the wilderness. The beauty of the country gratified the eye; its abundance of wild animals, the passion for hunting. They were surrounded by an enemy subtle and wary. "The sound of the warhoop oft woke the sleep of the cradle." But those wild borderers flinched

not from the contest: even their women and children often performed deeds of heroism from which the iron nerves of manhood might well have shrunk in fear.

In such circumstances no opportunity could be afforded for the cultivation of the arts and elegancies of refined life. In their seclusion, amid danger and peril, there arose a peculiar condition of society elsewhere unknown. It has been well portrayed by one of their number, the Rev. Dr. Joseph Doddridge, who, giving the results of his experience, pleases by the artless simplicity of his pictures. These the compiler presents below, as nothing equal to them for this object ever has been or probably will be produced, commencing with:

Settlement of the Country.—The settlements on this side of the mountains commenced along the Monongahela, and between that river and the Laurel Ridge, in the year 1772. In the succeeding year they reached the Ohio River. The greater number of the first settlers came from the upper parts of the then colonies of Maryland and Virginia. Braddock's trail, as it was called, was the route by which the greater number of them crossed the mountains. A less number of them came by the way of Bedford and Fort Ligonier, the military road from Pennsylvania to Pittsburgh. They effected their removals on horses, furnished with pack-saddles. This was the more easily done, as but few of these early adventurers in the wilderness were encumbered with much baggage.

Land was the object which invited the greater number of these people to cross the mountain, for, as the saying was, "it was to be had there for taking it up;" that is, building a cabin and raising a crop of grain, however small, of any kind, entitled the occupant to four hundred acres of land and a pre-emption right to one thousand acres more adjoining, to be secured by a land office warrant. This right was to take effect if there happened to be so much vacant land in any part thereof adjoining the tract secured by the settlement right.

At an early period, the government of Virginia appointed three commissioners to give certificates of settlement rights. These certificates, together with the surveyor's plot, were sent to the land office of the State, where they laid six months to await any caveat which might be offered. If none was offered, the patent was then issued.

There was, at an early period of our settlements, an inferior kind of land title, denominated a "tomahawk right," which was made by deadening a few trees near the head of a spring, and marking the bark of some one or more of them with the initials of the name of the person who made the improvement. I remember to have seen a number of these "tomahawk rights" when a boy. For a long time many of them bore the names of those who made them. I have no knowledge of the efficacy of the tomakawk improvement, or whether it conferred any right whatever, unless

followed by an actual settlement. These rights, however, were often bought and sold.

Some of the early settlers took the precaution to come over the mountains in the spring, leaving their families behind, to raise a crop of corn, and then return and bring them out in the fall. This, I should think, was the better way. Others, especially those whose families were small, brought them with them in the spring. My father took the latter course. His family was but small, and he brought it all with him. The Indian meal which he brought over the mountain was expended six weeks too soon, so that for that length of time we had to live without bread. The lean venison and the breast of wild turkeys we were taught to call bread. The flesh of the bear was denominated meat. This artifice did not succeed very well; after living in this way for some time we became sickly; the stomach seemed to be always empty and tormented with a sense of hunger. I remember how narrowly the children watched the growth of the potato-tops, pumpkin and squash vines, hoping from day to day to get something to answer in the place of bread. How delicious was the taste of the young potatoes when we got them! What a jubilee when we were permitted to pull the young corn for roasting ears. Still more so when it had acquired a sufficient hardness to be made into johnny-cakes by the aid of a tin grater. We then, became healthy, vigorous, and contented with our situation, poor as it was.

The division lines between those whose lands adjoined, were generally made in an amicable manner before any survey of them was made by the parties concerned. In doing this they were guided mainly by the tops of ridges and watercourses, but particularly the former. Hence the greater number of farms in the western parts of Pennsylvania and Virginia bear a striking resemblance to an amphitheater. The buildings occupy a low situation, and the tops of the surrounding hills are the boundaries of the tract to which the family mansion belongs. Our forefathers were fond of farms of this description, because, as they said, they were attended with this convenience, "that everything comes to the house down hill." In the hilly parts of the State of Ohio, the land having been laid off in an arbitrary manner by straight parallel lines, without regard to hill or dale, the farms present a different aspect from those on the east side of the river opposite. There the buildings as frequently occupy the tops of the hills as any other situation.

Most of the early settlers considered their land as of little value, from an apprehension that after a few years' cultivation it would lose its fertility, at least for a long time. I have often heard them say that such a field would bear so many crops, and another so many more or less than that. The ground of this belief concerning the short-lived fertility of the land in this country, was the poverty of a great proportion of the land in the lower parts of

Maryland and Virginia, which, after producing a few crops, became unfit for use and was thrown out into commons.

In their unfavorable opinion of the nature of the soil of our country, our forefathers were utterly mistaken. The native weeds were scarcely destroyed, before the white clover and different kinds of grass made their appearance. These soon covered the ground so as to afford pasture for the cattle, by the time the wood range was eaten out, as well as to protect the soil from being washed away by drenching rains, so often injurious to hilly countries.

Judging from Virgil's test of fruitful and barren soils, the greater part of this country must possess every requisite for fertility. The test is this: dig a hole of any reasonable dimensions and depth. If the earth which was taken out, when thrown lightly back into it, does not fill up the hole, the soil is fruitful; but if it more than fill up, the soil is barren. Whoever chooses to make this experiment, will find the result indicative of the richness of our soil. Even our graves, notwithstanding the size of the vault, are seldom finished with the earth thrown out of them, and they soon sink below the surface of the earth.

Furniture and Diet.—The settlement of a new country, in the immediate neighborhood of an old one, is not attended with much difficulty, because supplies can be readily obtained from the latter, but the settlement of a country very remote from any cultivated region is a very different thing, because, at the outset, food, raiment, and the implements of husbandry are obtained only in small supplies, and with very great difficulty. The task of making new establishments in a remote wilderness, in a time of profound peace, is sufficiently difficult; but when, in addition to all the hardships attendant on this business, those resulting from an extensive and furious warfare with savages are superadded, toil, privations, and suffering are then carried to the full extent of the capacity of man to endure them.

Such was the wretched condition of our forefathers in making their settlements here. To all their difficulties and privations the Indian wars were a weighty addition. This destructive warfare they were compelled to sustain almost single-handed, because the revolutionary contest with England, at the outset, gave full employment to all the strength and resources on the east side of the mountains.

The furniture for the table, for several years after the settlement of this country, consisted of a few pewter dishes, plates, and spoons; but mostly of wooden bowls, trenchers, and noggins. If these last were scarce, gourds and hard-shelled squashes made up the deficiency. The iron pots, knives, and forks were brought from the east side of the mountains, along with the salt and iron, on pack-horses. These articles of furniture corresponded very well with the articles of diet on which they were employed. "Hog and hominy" were proverbial for the dishes of which they were the component parts. Johnny-cake and pone were, at the

•

outset of the settlements of the country, the only forms of bread in use for breakfast and dinner. At supper, milk and mush was the standard dish. When milk was not plenty, which was often the case, owing to the scarcity of cattle or the want of proper pasture for them, the substantial dish of hominy had to supply their place. Mush was frequently eaten with sweetened water, molasses, bears' oil, or the gravy of fried meats.

Every family, beside a garden for the few vegetables which they cultivated, had another small inclosure, from one-half to an acre, which they called the "truck patch," in which they raised corn for roasting-ears, pumpkins, beans, squashes and potatoes. These, in the latter part of the summer and fall, were cooked with their pork, venison, and bear meat for dinner, and made very wholesome and well-tasted dishes. The standing dish for every log-rolling, house-raising, or harvest-day, was a pot-pie, or what is in other countries called "sea-pie." This, beside answering for dinner, served for a part of the supper also. The remainder of it from dinner being eaten with milk in the evening, after the conclusion of the labors of the day.

I well recollect the first time I ever saw a tea-cup and saucer, and tasted coffee. My mother died when I was about six or seven years of age. My father then sent me to Maryland with a brother of my grandfather, Alexander Wells, to school. At Bedford everything was changed. The tavern at which my uncle put up was a stone house, and to make the change still more complete, it was plastered on the inside, both as to the walls and ceiling. On going into the dining-room, I was struck with astonishment at the appearance of the house. I had no idea that there was any house in the world that was not built of logs; but here I looked around the house and could see no logs, and above I could see no joists. Whether such a thing had been made so by the hands of man, or had grown so of itself, I could not conjecture; I had not the courage to inquire anything about it. I watched attentively to see what the big folks would do with their little cups and spoons. I imitated them, and found the taste of the coffee nauseous beyond anything I had ever tasted in my life. I continued to drink, as the rest of the company did, with tears streaming from my eyes; but where it was to end I was at a loss to know, as the little cups were filled immediately after being emptied. This circumstance distressed me very much, and I durst not say I had enough. Looking attentively at the grand persons, I saw one man turn his little cup bottom upward, and put his little spoon across it. I observed after this that his cup was not filled again. I followed his example, and to my great satisfaction, the result, as to my cup, was the same.

The introduction of delft-ware was considered by many of the backwoods people, as a culpable innovation. It was too easily broken, and the plates of that ware dulled their scalping and clasp-knives. Tea-ware was too small for *men*; they might do for

CRAWFORD'S BATTLE FIELD.

"The large tree on the right of the engraving, and others in the vicinity, even to the present day, show marks of the bullets."

women and children. Tea and coffee were only slops, which, in the adage of the day, "did not stick by the ribs." The idea was, that they were only designed for people of quality, who do not labor, or the sick. A genuine backwoodsman would have thought himself degraded by showing a fondness for these slops.

Dress.—On the frontiers, and particularly among those who were much in the habit of hunting, and going on scouts and campaigns, the dress of the men was partly Indian, and partly that of civilized nations.

The hunting-shirt was universally worn. This was a kind of loose frock, reaching half way down to the thighs, with large sleeves, open before, and so wide as to lap over a foot or more when belted. The cape was large, and sometimes handsomely fringed with a raveled piece of cloth of a different color from that of the hunting-shirt itself. The bosom of this shirt served as a wallet to hold a chunk of bread, cakes, jerk, tow for wiping the barrel of his rifle, or any other necessary for the hunter or warrior. The belt, which was always tied behind, answered several purposes, beside that of holding the dress together. In cold weather, the mittens and sometimes the bullet-bag, occupied the front part of it. To the right side was suspended the tomahawk, and to the left the scalping-knife in its leathern sheath. The hunting-shirt was generally made of linsey, sometimes of coarse linen, and a few of dressed deer skins. These last were very cold and uncomfortable in wet weather. The shirt and jacket were of the common fashion. A pair of drawers or breeches and leggins were the dress of the thighs and legs; a pair of moccasins answered for the feet much better than shoes. These were made of dressed deer skin. They were mostly made of a single piece, with a gathering seam along the top of the foot, and another from the bottom of the heel without gathers, as high as the ankle-joint, or a little higher. Flaps were left on each side to reach some distance up the legs. These were nicely adapted to the ankles and lower part of the legs by thongs of deer skin, so that no dust, gravel, or snow could get within the moccasins.

The moccasins in ordinary use caused but a few hours' labor to make them. This was done by an instrument denominated a moccasin awl, which was made of the back spring of an old clasp-knife. This awl, with its buckhorn handle, was an appendage, too, of every shot-pouch strap, together with a roll of buckskin for mending the moccasins. This was the labor of almost every evening. They were sewed together, and patched with deer skin thongs, or whangs, as they were commonly called. In cold weather the moccasins were well stuffed with deers' hair, or dry leaves, so as to keep the feet comfortably warm; but in wet weather it was usually said that wearing them was "a decent way of going barefooted;" and such was the fact, owing to the spongy texture of the leather of which they were made.

Owing to this defective covering of the feet, more than to any

other circumstance, the great number of our hunters and warriors were afflicted with the rheumatism in their limbs. Of this disease they were all apprehensive in cold or wet weather, and therefore always slept with their feet to the fire, to prevent or cure it as well as they could. This practice, unquestionably, had a very salutary effect, and prevented many of them from becoming confirmed cripples in early life.

In the latter years of the Indian war, our young men became more enamored of the Indian dress throughout, with the exception of the matchcoat. The drawers were laid aside and the leggins made longer, so as to reach the upper part of the thigh. The Indian breech-clout was adopted. This was a piece of linen or cloth, nearly a yard long, and eight or nine inches broad. This passed under the belt, before and behind, leaving the ends for flaps, hanging before and behind over the belt. These flaps were sometimes ornamented with some coarse kind of embroidery work. To the same belts which secured the breech-clout, strings which supported the long leggins were attached. When this belt, as was often the case, passed over the hunting-shirt, the upper part of the thighs and part of the hips were naked. The young warrior, instead of being abashed by this nudity, was proud of his Indian like dress. In some instances I have seen them go into places of public worship in this dress. Their appearance, however, did not add much to the devotion of the young ladies.

The linsey petticoat and bed gown which were the universal dress of our women in early times, would make a strange figure in our days. A small home-made handkerchief, in point of elegance, would illy supply the place of that profusion of ruffles with which the necks of our ladies are now [1824] ornamented.

They went barefooted in warm weather, and in cold, their feet were covered with moccasins, coarse shoes, or shoe-packs, which would make but a sorry figure beside the elegant morocco slippers, often embossed with bullion, which at present ornament the feet of their daughters and grand-daughters. The coats and bed gowns of the women as well as the hunting-shirts of the men were hung in full display on wooden pegs, round the walls of their cabins, so that while they answered in some degree the place of paper hangings or tapestry, they announced to the stranger as well as neighbor the wealth or poverty of the family in the articles of clothing. This practice has not yet been wholly laid aside among the back-woods families.

The historian would say to the ladies of the present time:—our ancestors of your sex knew nothing of the ruffles, leghorns, curls, combs, rings and jewels with which their fair daughters now [1824] decorate themselves. Such things were not then to be had. Many of the younger part of them were pretty well grown up before they ever saw the inside of a store, or even knew there was such a thing in the world, unless by hearsay, and indeed scarcely that. Instead of the toilet, they had to handle the distaff

and shuttle, the sickle or weeding hoe, contented if they could obtain their linsey clothing, and cover their heads with a sun-bonnet made of six or seven hundred linen.

The Fort.—My reader will understand by this term, not only a place of defense, but the residence of a small number of families belonging to the same neighborhood.

The stockades, bastions, cabins and block-house walls were furnished with port-holes at proper heights and distances. The whole of the outside was made completely bullet-proof. It may be truly said that necessity is the mother of invention; for the whole of this work was made without the aid of a single nail or spike of iron, and for this reason, such things were not to be had. In some places, less exposed, a single block-house, with a cabin or two, constituted the whole fort.

The families belonging to these forts were so attached to their own cabins on their farms, that they seldom moved into their fort in the spring until compelled by some alarm, as they called it; that is, when it was announced by some murder, that Indians were in the settlement. The fort to which my father belonged, was, during the first years of the war, three-quarters of a mile from his farm; but when this fort went to decay, and became unfit for defense, a new one was built at his own house. I well remember that, when a little boy, the family were sometimes waked up in the dead of night by an express, with a report that the Indians were at hand. The express came softly to the door, or back window, and by a gentle tapping raised the family. This was easily done, as an habitual fear made us ever watchful, and sensible to the slightest alarm. The whole family were instantly in motion. My father seized his gun and other implements of war. My stepmother waked up and dressed the children as well as she could, and being myself the oldest of the children, I had to take my share of the burdens to be carried to the fort. There was no possibility of getting a horse in the night to aid us in removing to the fort. Beside the little children, we caught up what articles of clothing and provision we could get hold of in the dark, for we durst not light a candle, or even stir the fire. All this was done with the utmost dispatch, and the silence of death. The greatest care was taken not to awaken the youngest child.

To the rest it was enough to say *Indian*, and not a whisper was heard afterward. Thus, it often happened that the whole number of families belonging to a fort, who were in the evening at their homes, were all in their little fortress before the dawn of the next morning. In the course of the succeeding day, their household furniture was brought in by parties of the men under arms. Some families belonging to each fort were much less under the influence of fear than others, and who, after an alarm had subsided, in spite of every remonstrance, would remove home, while their more prudent neighbors remained in the fort. Such families were denominated "foolhardy," and gave no small amount of trouble,

by creating such frequent necessities of sending runners to warn them of their danger, and sometimes parties of our men to protect them during their removal.

Caravans.—The acquisition of the indispensable articles of salt, iron, steel and castings, presented great difficulties to the first settlers of the western country. They had no stores of any kind, no salt, iron, nor iron works; nor had they money to make purchases where those articles could be obtained. Peltry and furs were their only resources, before they had time to raise horses and cattle for sale in the Atlantic States.

Every family collected what peltry and fur they could obtain throughout the year, for the purpose of sending them over the mountains for barter. In the fall of the year, after seeding time, every family formed an association with some of their neighbors, for starting the little caravan. A master driver was selected from among them, who was to be assisted by one or more young men, and sometimes by a boy or two. The horses were fitted out with pack-saddles, to the hinder part of which was fastened a pair of hobbles, made of hickory withes, a bell and collar ornamented his neck. The bags provided for the conveyance of the salt were filled with feed for the horses; on the journey, a part of this feed was left at convenient stages on the way down, to support the return of the caravan; large wallets, well filled with bread, jerk, boiled ham, and cheese, furnished provision for the drivers. At night, after feeding, the horses, whether put in pasture or turned out into the woods, were hobbled, and the bells were opened.

The barter for salt and iron was made first at Baltimore. Frederick, Hagerstown, Oldtown and Fort Cumberland in succession became the place of exchange. Each horse carried two bushels of alum salt, weighing eighty-four pounds the bushel. This, to be sure, was not a heavy load for the horses, but it was enough, considering the scanty subsistence allowed them on the journey. The common price of a bushel of alum salt, at an early period, was a good cow and calf; and, until weights were introduced, the salt was measured into the half bushel by hand, as lightly as possible. No one was permitted to walk heavily over the floor while the operation of measuring was going on.

The Wedding.—For a long time after the first settlement of this country, the inhabitants in general married young. There was no distinction of rank, and very little of fortune. On these accounts the first impression of love resulted in marriage; and a family establishment cost but a little labor, and nothing else. A description of a wedding, from the beginning to the end, will serve to show the manners of our forefathers, and mark the grade of civilization which has succeeded to their rude state of society in the course of a few years. At an early period, the practice of celebrating the marriage at the house of the bride began, and, it should seem, with great propriety. She also had the choice of the priest to perform the ceremony.

A wedding engaged the attention of a whole neighborhood; and the frolic was anticipated by old and young with eager expectation. This is not to be wondered at, when it is told that a wedding was almost the only gathering which was not accompanied with the labor of reaping, log-rolling, building a cabin, or planning some scout or campaign.

In the morning of the wedding-day, the groom and his attendants assembled at the house of his father, for the purpose of reaching the mansion of his bride by noon, which was the usual time for celebrating the nuptials, which for certain must take place before dinner.

Let the reader imagine an assemblage of people, without a store, tailor or mantuamaker, within a hundred miles; and an assemblage of horses, without a blacksmith or saddler within an equal distance. The gentlemen dressed in shoe-packs, moccasins, leather breeches, leggins, linsey hunting-shirts, and all home-made. The ladies dressed in linsey petticoats, and linsey or linen bed gowns, coarse shoes, stockings, handkerchiefs, and buckskin gloves, if any. If there were any buckles, rings, buttons or ruffles, they were the relics of old times; family pieces, from parents or grandparents. The horses were caparisoned with old saddles, old bridles or halters, and pack-saddles with a bag or blanket thrown over them; a rope or string as often constituted the girth as a piece of leather.

The march, in double file, was often interrupted by the narrowness and obstructions of our horse-paths, as they were called, for we had no roads; and these difficulties were often increased, sometimes by the good and sometimes by the ill-will of neighbors, by falling trees, and tying grapevines across the way. Sometimes an ambuscade was formed by the wayside, and an unexpected discharge of several guns took place, so as to cover the wedding-party with smoke. Let the reader imagine the scene which followed this discharge; the sudden spring of the horses, the shrieks of the girls, and the chivalric bustle of their partners to save them from falling. Sometimes, in spite of all that could be done to prevent it, some were thrown to the ground. If a wrist, elbow or ankle happened to be sprained, it was tied with a handkerchief, and little more was thought or said about it.

Another ceremony commonly took place before the party reached the house of the bride, after the practice of making whisky began, which was at an early period. When the party were about a mile from the place of their destination, two young men would single out to run for the bottle; the worse the path, the more logs, brush and deep hollows, the better, as these obstacles afforded an opportunity for the greater display of intrepidity and horsemanship. The English fox-chase, in point of danger to the riders and their horses, is nothing to this race for the bottle. The start was announced by an Indian yell; logs, brush, muddy hollows, hill and glen were speedily passed by the rival ponies. The bottle was always filled for the occasion, so that there was no use for

judges; for the first who reached the door was presented with the prize, with which he returned in triumph to the company. On approaching them, he announced his victory over his rival by a shrill whoop. At the head of the troop, he gave the bottle first to the groom and his attendants, and then to each pair in succession to the rear of the line, giving each a dram; and then putting the bottle in the bosom of his hunting-shirt, took his station in the company.

The ceremony of the marriage preceded the dinner, which was a substantial backwoods feast, of beef, pork, fowls, and sometimes venison and bear-meat, roasted and boiled, with plenty of potatoes, cabbage and other vegetables. During the dinner, the greatest hilarity always prevailed, although the table might be a large slab of timber, hewed out with a broadax, supported by four sticks set in auger-holes; and the furniture, some old pewter dishes and plates; the rest, wooden bowls and trenchers; a few pewter spoons, much battered about the edges, were to be seen at some tables. The rest were made of horn. If knives were scarce, the deficiency was made up by the scalping-knives, which were carried in sheaths suspended to the belt of the hunting-shirt.

After dinner the dancing commenced, and generally lasted until the next morning. The figures of the dances were three and four-handed reels, or square sets and jigs. The commencement was always a square four, which was followed by what was called jigging it off; that is, two of the four would single out for a jig, and were followed by the remaining couple. The jigs were often accompanied with what was called cutting out; that is, when either of the parties became tired of the dance, on intimation, the place was supplied by some one of the company without any interruption of the dance. In this way, a dance was often continued until the musician was heartily tired of his situation. Toward the latter part of the night, if any of the company through weariness attempted to conceal themselves for the purpose of sleeping, they were hunted up, paraded on the floor, and the fiddler ordered to play, "Hang out until to-morrow morning."

About nine or ten o'clock, a deputation of the young ladies stole off the bride and put her to bed. In doing this, it frequently happened that they had to ascend a ladder instead of a pair of stairs, leading from the dining and ball-room to the loft, the floor of which was made of clapboards, lying loose, and without nails. As the foot of the ladder was commonly behind the door, which was purposely opened for the occasion, and its rounds at the inner ends were well hung with hunting-shirts, petticoats, and other articles of clothing, the candles being on the opposite side of the house, the exit of the bride was noticed but by few. This done, a deputation of young men in like manner stole off the groom, and placed him snugly by the side of his bride. The dance still continued; and if seats happened to be scarce, which was often the case, every young man, when not engaged in the dance, was obliged to offer

his lap as a seat for one of the girls; and the offer was sure to be accepted. In the midst of this hilarity, the bride and groom were not forgotten. Pretty late in the night, some one would remind the company that the new couple must stand in need of some refreshment. Black Betty, which was the name of the bottle, was called for, and sent up the ladder; but sometimes Black Betty did not go alone. I have many times seen as much bread, beef, pork and cabbage sent along with her as would afford a good meal for half a dozen hungry men. The young couple were compelled to eat and drink, more or less, of whatever was offered them.

In the course of the festivity, if any wanted to help himself to a dram and the young couple to a toast, he would call out, "Where is Black Betty, I want to kiss her sweet lips." Black Betty was soon handed to him; then holding her up in his right hand, he would say, "Here's health to the groom, not forgetting myself; and here's health to the bride—thumping luck and big children!" This, so far from being taken amiss, was considered as an expression of a very proper and friendly wish; for big children, especially sons, were of great importance, as we were few in number, and engaged in perpetual hostility with the Indians, the end of which no one could foresee. Indeed, many of them seemed to suppose that war was the natural state of man, and therefore did not anticipate any conclusion of it. Every big son was therefore considered as a young soldier.

It often happened that some neighbors or relations, not being asked to the wedding, took offense; and the mode of revenge adopted by them on such occasions was that of cutting off the manes, foretops and tails of the horses of the wedding company.

On returning to the infair, the order of procession and the race for Black Betty were the same as before. The feasting and dancing often lasted for several days, at the end of which the whole company were so exhausted with loss of sleep, that several days' rest were requisite to fit them to return to their ordinary labors.

Should I be asked why I have presented this unpleasant portrait of the rude manners of our forefathers—I in my turn would ask my reader, why are you pleased with the blood and carnage of battles? Why are you delighted with the fictions of poetry, the novel, and romance? I have related truth, and only truth, strange as it may seem. I have depicted a state of society and manners which is fast vanishing from the memory of man, with a view to give the youth of our country a knowledge of the advantages of civilization, and to give contentment to the aged, by preventing them from saying, "that former times were better than the present."

The House-Warming.—I will proceed to state the usual manner of settling a young couple in the world. A spot was selected on a piece of land of one of the parents for their habitation. A day was appointed, shortly after their marriage, for commencing the building of their cabin. The fatigue party consisted of choppers,

whose business it was to fell the trees and cut them off at proper lengths. A man with a team for hauling them to the place and arranging them, properly assorted, at the ends and sides of the building; a carpenter, if such he might be called, whose business it was to search the woods for a proper tree for making clapboards for the roof. The tree for this purpose must be straight-grained, and from three to four feet in diameter. The boards were split four feet long, with a large frow, and as wide as the timber would allow. They were used without planing or shaving. Another division was employed in getting puncheons for the floor of the cabin. This was done by splitting trees, about eighteen inches in diameter, and hewing the faces of them with a broadax. They were half the length of the floor they were intended to make.

The materials for the cabin were mostly prepared the first day, and sometimes the foundation laid in the evening. The second day was allotted for the raising. In the morning of the next day the neighbors collected for the raising. The first thing to be done was the election of four corner men, whose business it was to notch and place the logs. The rest of the company furnished them with the timbers. In the meantime the boards and puncheons were collecting for the floor and the roof, so that by the time the cabin was a few rounds high, the sleepers and floor began to be laid. The door was made by sawing or cutting the logs on one side, so as to make an opening about three feet wide. This opening was secured by upright pieces of timber, about three inches thick, through which holes were bored into the ends of the logs for the purpose of pinning them fast. A similar opening, but wider, was made at the end for the chimney. This was built of logs, and made large, so as to admit of a back and jambs of stone. At the square, two end logs projected a foot or eighteen inches beyond the wall, to receive the butting poles, as they were called, against the end of which the first run of clapboards was supported. The roof was formed by making the end logs shorter until a single log formed the comb of the roof. On these logs the clapboards were placed, the ranges of them lapping some distance over those next below them, and kept in their places by logs placed at proper distances upon them.

The roof, and sometimes the floor, was finished on the same day of the raising. A third day was commonly spent by a few carpenters in leveling off the floor, making a clapboard door, and a table. This last was made of a split slab, and supported by four round legs set in augur holes. Some three-legged stools were made in the same manner. Some pins stuck in the logs at the back of the house supported some clapboards, which served for shelves for the table furniture. A fork, placed with its lower end in a hole in the floor, and the upper end fastened to a joist, served for a bedstead by placing a pole in the fork with one end through a crack between the logs of the wall. This front pole was crossed by a shorter one within the fork, with its outer end through

another crack. From the front pole, through a crack between the logs at the end of the house, the boards were put on which formed the bottom of the bed. Sometimes other poles were pinned to the fork, a little distance above these, for the purpose of supporting the front and foot of the bed, while the walls were the supports of its back and head. A few pegs around the walls for a display of the coats of the women and the hunting-shirts of the men, and two small forks or buck's horns to a joist, for the rifle and shot-pouch, completed the carpenters' work. In the meantime, masons were at work. With the heart pieces of timber of which the clapboards were made, they made billets for chunking up the cracks between the logs of the cabin and chimney. A large bed of mortar was made for daubing up those cracks. A few stones formed the back and jambs of the chimney.

The cabin being finished, the ceremony of *house-warming* took place before the young couple were permitted to move into it. The house-warming was a dance of the whole night's continuance, made up of the relatives of the bride and groom and their neighbors. On the day following, the young couple took possession of their new mansion.

Working.—The necessary labors of the farms along the frontiers were performed with every danger and difficulty imaginable. The whole population of the frontiers huddled together in their little forts, left the country with every appearance of a deserted region; and such would have been the opinion of a traveler on arriving at it, if he had not seen here and there a small field of corn or other grain in a growing state.

It is easy to imagine what losses must have been sustained by our first settlers, owing to this deserted state of their farms. It was not the full measure of their trouble that they risked their lives, and often lost them in subduing the forest and turning it into fruitful fields; but compelled to leave them in a deserted state during the summer season, a great part of the fruits of their labors were lost by this untoward circumstance. Their sheep and hogs were devoured by the wolves, panthers, and bears. Horses and cattle were often let into their field through breaches made in their fences by the falling of trees; and frequently almost the whole of a little crop of corn was destroyed by squirrels and raccoons, so that many families, after a hazardous and laborious spring and summer, had but little left for the comfort of the dreary winter.

The early settlers on the frontiers of this country were like the Arabs of the desert of Africa in at least two respects; every man was a soldier, and from early in the spring until late in the fall was almost continually in arms. Their work was often carried on by parties, each one of whom had his rifle and everything else belonging to his war dress. These were deposited in some central place in the field. A sentinel was stationed outside of the fence, so that on the least alarm the whole company repaired to their arms, and were ready for the combat in a moment.

Here again the rashness of some families proved a source of difficulty. Instead of joining the working parties, they went out and attended their farms by themselves, and in case of an alarm, an express was sent for them, and sometimes a party of men to guard them to the fort. These families, in some instances could boast that they had better crops and were better provided for the winter than their neighbors. In other instances their temerity cost them their lives.

In military affairs, when every one concerned is left to his own will, matters are sure to be but badly managed. The whole frontiers of Pennsylvania and Virginia presented but a succession of military camps and forts. We had military officers, that is to say, captains and colonels; but they, in many respects were only nominally such. They could advise, but not command. Those who chose to follow their advice, did so to such an extent as suited their fancy or interest. Others were refractory, and thereby gave much trouble. These officers would lead a scout or campaign. Those who thought proper to accompany them did so; those who did not, remained at home. Public odium was the only punishment for their laziness or cowardice.

It is but doing justice to the first settlers of this country to say, that instances of disobedience of families and individuals to the advice of our officers, were by no means numerous. The greater number cheerfully submitted to their direction with a prompt and faithful obedience.

Mechanic Arts.—In giving a history of the state of the mechanic arts as they were exercised at an early period of the settlement of this country, I shall present a people driven by necessity to perform works of mechanical skill, far beyond what a person enjoying all the advantages of civilization could expect from a population placed in such destitute circumstances.

My reader will naturally ask, where were their mills for grinding the grain? Where were their tanners for making leather? Where their smith shops for making and repairing their farming utensils? Who were their carpenters, tailors, cabinet workmen, shoemakers and weavers? The answer is, those manufactures did not exist, nor had they any tradesmen who were professedly such. Every family were under the necessity of doing everything for themselves, as well as they could.

The *hominny block* and *hand-mills* were in use in most of our houses. The first was made of a large block of wood, about three feet long, with an excavation burned in one end, wide at the top and narrow at the bottom, so that the action of the pestle on the bottom, threw the corn up the sides toward the top of it, from whence it continually fell down into the center. In consequence of this movement, the whole mass of the grain was pretty equally subjected to the strokes of the pestle. In the fall of the year, while the Indian-corn was soft, the block and pestle did pretty

well for making meal for making Johnny-cake and mush ; but were rather slow when the corn became hard.

The *sweep* was sometimes used to lessen the toil of pounding grain into meal. This was a pole of some springy, elastic wood, thirty feet long or more. The butt end was placed under the side of a house, or a large stump. This pole was supported by two forks, placed about one-third its length from the butt end, so as to elevate the small end about fifteen feet from the ground. To this was attached, by a large mortice, a piece of a sapling about five or six inches in diameter, and eight or ten feet long. The lower end of this was shaped so as to answer for a pestle. A pin of wood was put through it at a proper height, so that two persons could work at the sweep at once. This simple machine very much lessened the labor and expedited the work. In the Greenbriar country, where they had a number of saltpeter caves, the people made plenty of excellent gunpowder, by means of those sweeps and mortars.

A machine, still more simple than the mortar and pestle, was used for making meal while the corn was too soft to be beaten. It was called a *grater*. This was a half circular piece of tin, perforated with a punch from the concave side, and nailed by its edges to a block of wood. The ears of corn were rubbed on the rough edges of the holes, while the meal fell through them on the board or block, to which the grater was nailed, which, being in a slanting direction, discharged the meal into a cloth or bowl placed for its reception. This, to be sure, was a slow way of making meal, but necessity has no law.

The *hand-mill* was better than the mortar and grater. It was made of two circular stones, the lowest of which, was called the bed stone; the upper one the runner. These were placed in a hoop, with a spout for discharging the meal. A staff was let into a hole, in the upper surface of the runner, near the outer edge, and its upper end through a hole in a board fastened to a joist above, so that two persons could be employed in turning the mill at the same time. The grain was put into the opening in the runner by hand. These mills are still in use in Palestine, the ancient country of the Jews. To a mill of this sort our Saviour alluded, when with reference to the destruction of Jerusalem, he said, "Two women shall be grinding at a mill, the one shall be taken and the other left."

Our first water mills were of that description, denominated *tub-mills*. It consists of a perpendicular shaft, to the lower end of which a horizontal wheel of four or five feet diameter is attached. The upper end passes through the bed stone, and carries the runner after the manner of a trundlehead. These mills were built with very little expense, and many of them answered the purpose very well. Instead of bolting-cloth, sifters were in general use. These were made of deer skins in the state of parchment, stretched over a hoop, and perforated with a hot wire.

Our clothing was all of domestic manufacture. We had no other resource for clothing, and this, indeed, was a poor one. The crops of flax often failed, and the sheep were destroyed by the wolves. Linsey, which is made of flax and wool—the former, the chain, and the latter the filling—was the warmest and most substantial cloth we could make. Almost every house contained a loom, and almost every woman was a weaver.

Every family tanned their own leather. The tan-vat was a large trough sunk to the upper edge in the ground. A quantity of bark was easily obtained every spring in clearing and fencing land. This, after drying, was brought in, and in wet days was shaved and pounded on a block of wood, with an ax or mallet. Ashes was used in place of lime for taking off the hair. Bear's oil, hog's lard and tallow, answered the place of fish oil. The leather, to be sure, was coarse, but it was substantially good. The operation of currying was performed by a drawing-knife, with its edge turned after the manner of a currying-knife. The blacking for the leather was made of soot and hog's lard.

Almost every family contained its own tailors and shoemakers. Those who could not make shoes, could make shoe-packs. These, like moccasins, were made of a single piece of leather, with the exception of a tongue-piece on the top of the foot. This was about two inches broad, and circular at the lower end. To this, the main piece of leather was sewed with a gathering stitch. The seam behind was like that of a moccasin. To the shoe-pack a sole was sometimes added. The women did the tailor work. They could all cut out and make hunting-shirts, leggins and drawers.

The state of society which existed in our country at an early period of its settlement, is well calculated to call into action every native mechanical genius. There was in almost every neighborhood some one whose natural ingenuity enabled him to do many things for himself and neighbors, far above what could have been reasonably expected. With the few tools which they brought with them into the country, they certainly performed wonders. Their plows, harrows with their wooden teeth, and sleds, were in many instances well made. Their cheaper ware, which comprehended everything for holding milk and water, was generally pretty well executed. The cedar ware, by having a white and red stave, was then thought beautiful. Many of their puncheon floors were very neat; their joints close and the top even and smooth. Their looms, although heavy, did very well. Those who could not exercise these mechanical arts, were under the necessity of giving labor or barter to their neighbors in exchange for the use of them, so far as their necessities required.

Sports.—These were such as might be expected among a people who, owing to their circumstances as well as to their education, set a higher value on physical than on mental endowments; and on

skill in hunting and bravery in war, than on any polite accomplishments or fine arts.

Amusements are in many instances either imitations of the business of life, or at least of some of its particular objects of pursuit. Many of the sports of the early settlers were imitative of the exercises and stratagems of hunting and war. Boys were taught the use of the bow and arrow at an early age, and acquired considerable expertness in their use. One important pastime of our boys was that of imitating the noise of every bird and beast in the woods. This faculty was a very necessary part of education, on account of its utility in certain circumstances. The imitations of the gobbling and other sounds of wild turkeys, often brought those keen-eyed and ever watchful tenants of the forests within reach of the rifle. The bleating of the fawn brought its dam to her death in the same way. The hunter often collected a company of mopish owls to the trees above his camp, and amused himself with their hoarse screaming. His howl would raise and obtain responses from a pack of wolves, so as to inform him of their neighborhood as well as to guard him against their depredations.

This imitative faculty was sometimes requisite as a measure of precaution in war. The Indians, when scattered about in a neighborhood, often collected together by imitating turkeys by day and wolves or owls by night. I have often witnessed the consternation of a whole neighborhood in consequence of a few screeches of owls. An early and correct use of this imitative faculty, was considered as an indication that its possessor would become, in due time, a good hunter and valiant warrior.

Throwing the tomahawk was another boyish sport, in which many acquired considerable skill. The tomahawk, with its handle of a certain length, will make a given number of turns in a given distance. Say in five steps it will strike with its edge, the handle downward; at the distance of seven and a half, it will strike with its edge, the handle upward, and so on. A little experience enabled the boy to measure the distance with his eye, when walking through the woods, and strike a tree with his tomahawk any way he chose.

The athletic sports of running, jumping, and wrestling were the pastimes of the boys in common with the men. A well grown boy, at the age of twelve or thirteen years, was furnished with a small rifle and shot-pouch. He then became a fort soldier, and had his port-hole assigned him. Hunting squirrels, turkeys, and raccoons soon made him expert in the use of his gun. Dancing was the principal amusement of our young people of both sexes. Their dances, to be sure, were of the simplest forms; three-handed and four-handed reels and jigs. Country (contra) dances, cotillions, and minuets were unknown. I remember to have seen, once or twice, a dance which was called "The Irish Trot."

Shooting at a mark was a common diversion among the men when their stock of ammunition would allow it; this, however, was

far from being always the case. The present mode of shooting off-hand was not then in practice. This mode was not considered as any trial of the value of a gun; nor, indeed, as much of a test of the skill of a marksman. Their shooting was from a rest, and at as great a distance as the length and weight of the barrel of the gun would throw a ball on a horizontal level. Such was their regard to accuracy in those sportive trials of their rifles, and in their own skill in the use of them, that they often put moss or some other soft substance on the log or the stump from which they shot, for fear of having the bullet thrown from the mark by the spring of the barrel. When the rifle was held to the side of a tree for a rest, it was pressed against it as lightly as possible for the same reason. Rifles of former times were different from those of modern date; few of them carried more than forty-five bullets to the pound. Bullets of a less size were not thought sufficiently heavy for hunting or war.

Dramatic narrations, chiefly concerning Jack and the Giant, furnished our young people with another source of amusement during their leisure hours. Many of these tales were lengthy and embraced a considerable range of incident. Jack, always the hero of the story, after encountering many difficulties and performing many great achievements, always came off conqueror of the Giant. Many of these stories were tales of knight errantry, in which some captive virgin was released and restored to her lover.

Singing was another but not very common amusement among our first settlers. Their tunes were rude enough, to be sure. Robin Hood furnished a number of our songs; the balance were mostly tragical. These last were denominated "love songs about murder." As to cards, dice, back-gammon, and other games of chance we knew nothing about them. They are among the blessed gifts of civilization.

Witchcraft.—The belief in witchcraft was prevalent among the early settlers of the western country. To the witch was ascribed the tremendous power of inflicting strange and incurable diseases, particularly on children; of destroying cattle by shooting them with hair balls, and a great variety of other means of destruction; of inflicting spells and curses on guns and other things; and lastly of changing men into horses, and after bridling and saddling them, riding them at full speed over hill and dale, to their frolics and other places of rendezvous. More ample powers of mischief than these cannot well be imagined.

Wizards were men supposed to possess the same mischievous powers as the witches; but these were seldom exercised for bad purposes. The powers of the wizards were exercised almost exclusively for the purpose of counteracting the malevolent influences of the witches of the other sex. I have known several of those *witch masters*, as they were called, who made a public profession of curing the diseases inflicted by the influence of witches, and I

have known respectable physicians, who had no greater proportion of business in the line of their profession, than many of those witch masters had, in theirs.

The means by which the witch was supposed to inflict diseases, cures, and spells I never could learn. They were hidden sciences, which no one was supposed to understand, excepting the witch herself, and no wonder, as no such arts ever existed in any country. The diseases of children, supposed to be inflicted by witchcraft, were those of internal dropsy of the brain and the rickets. The symptoms and cure of these destructive diseases were utterly unknown in former times in this country. Diseases which neither could be accounted for nor cured, were usually ascribed to some supernatural agency of a malignant kind.

For the cure of the diseases inflicted by witchcraft, the picture of the supposed witch was drawn on a stump or a board, and shot at with a bullet containing a little bit of silver. This silver bullet transferred a painful, and sometimes a mortal spell on that part of the witch corresponding with the part of the portrait struck by the bullet. Another method of cure was that of getting some of the child's water, which was closely corked up in a vial and hung up in the chimney. This complimented the witch with a stranguary, which lasted as long as the vial remained in the chimney. The witch had but one way of relieving herself of any spell inflicted on her in any way, which was that of borrowing something, no matter what, of the family to which the subject of the exercise of her witchcraft belonged. I have known several poor old women much surprised at being refused requests which had usually been granted without hesitation, and almost heart-broken when informed of the cause of the refusal.

When cattle or dogs were supposed to be under the influence of witchcraft, they were burnt in the forehead by a branding-iron, or when dead, burned wholly to ashes. This inflicted a spell upon the witch, which could only be removed by borrowing as above stated.

Witches were often said to milk the cows of their neighbors. This they did by fixing a new pin in a new towel for each cow intended to be milked. This towel was hung over her own door, and by means of certain incantations the milk was extracted from the fringes of the towel after the manner of milking a cow. This happened when the cows were too poor to give much milk. The first German glass-blowers in this country drove the witches out of their furnaces by throwing living puppies into them.

Morals.—In the section of country where my father lived, there was for many years after the settlement of the country "neither law nor gospel." Our want of legal government was owing to the uncertainty whether we belonged to the State of Virginia or Pennsylvania. The line, which at present divides the two States, was not run until some time after the conclusion of the revolutionary war. Thus it happened during a long period of time, that we

knew nothing of courts, lawyers, magistrates, sheriffs, or constables. Every one was, therefore, at liberty "to do whatsoever was right in his own eyes."

As this is a state of society which few of my readers have ever witnessed, I shall describe it as minutely as I can, and give in detail those moral maxims which in a great degree answered the important purposes of municipal jurisprudence.

In the first place let it be observed, that in a sparse population, where all the members of a community are well known to each other, and especially in a time of war where every man capable of bearing arms is considered highly valuable as a defender of his country, public opinion has its full effect and answers the purpose of a legal government better than it would in a dense population and in a time of peace.

Such was the situation of our country along the line of our settlement. They had no civil, military, nor ecclesiastical laws, at least none that were enforced; and yet "they were a law unto themselves," as to the leading obligations of our nature, in all the relations in which they stood to each other. The turpitude of vice and the majesty of moral virtue were then as apparent as now, and were then regarded with the same sentiments of aversion or respect which they inspire at the present time. Industry in working and hunting, bravery in war, candor, hospitality, honesty, and steadiness of deportment received their full reward of public honor and public confidence among our rude forefathers, as well as among their better instructed and more polished descendants. The punishments, which they inflicted upon offenders by the imperial court of public opinion, were well adapted for the reformation of the culprit or his expulsion from the community.

The punishment for idleness, lying, dishonesty, and ill-fame generally, was that of "hating the offender out," as they generally expressed it. This mode of chastisement was like the *atimeia* of the Greeks. It was a public expression, in various ways, of a general sentiment of indignation against such as transgressed the moral maxims of the community to which they belonged. This commonly resulted either in the reformation or banishment of the person against whom it was directed.

At house-raising, log-rollings, and harvest parties every one was expected to do his duty faithfully. A person who did not perform his share of labor on these occasions, was designated by the epithet of "Lawrence," or some other title still more opprobrious. And when it came to his turn to require the like aid from his neighbors, the idler soon felt his punishment in their refusal to attend his calls.

Although there was no legal compulsion to the performance of military duty; yet every man of full age and size was expected to do his full share of public service. If he did not do so, he was "hated out as a coward." Even the want of any article of war equipments, such as ammunition, a sharp flint, a priming-wire, a

scalping-knife, or a tomahawk, was thought highly disgraceful. A man who, without reasonable cause, failed to go on a scout or campaign, when it came to his turn, met with an expression of indignation in the countenances of his neighbors, and epithets of dishonor were fastened on him without mercy.

Debts, which make such an uproar in civilized life, were but little known among our forefathers at the early settlement of this country. After the depreciation of the continental paper they had no money of any kind; everything purchased was paid for in produce or labor. A good cow and calf were often the price of a bushel of alum salt. If a contract was not punctually fulfilled the credit of the delinquent was at an end.

Any petty theft was punished with all the infamy that could be heaped on the offender. A man on a campaign stole from his comrade a cake out of the ashes, in which it was baking. He was immediately named "the bread rounds." This epithet of reproach was bandied about in this way: when he came in sight of a group of men one of them would call, "Who comes there?" Another would answer, "The bread rounds." If any one meant to be more serious about the matter, he would call out, "Who stole a cake out of the ashes?" Another replied by giving the name of the man in full; to this a third would give confirmation by exclaiming, "That is true, and no lie." This kind of "tongue-lashing" he was doomed to hear for the rest of the campaign, as well as for years after his return home.

If a theft was detected in any of the frontier settlements, a summary mode of punishment was always resorted to. The first settlers, as far as I knew of them, had a kind of innate or hereditary detestation of the crime of theft in any shape or degree, and their maxim was that "a thief must be whipped." If the theft was of something of value, a kind of jury of the neighborhood, after hearing the testimony, would condemn the culprit to Moses' law, that is, to forty stripes, save one. If the theft was of some small article, the offender was doomed to carry on his back the flag of the United States, which then consisted of thirteen stripes. In either case some able hands were selected to execute the sentence, so that the stripes were sure to be well laid on.

This punishment was followed by a sentence of exile. He then was informed that he must decamp in so many days and be seen there no more, on penalty of having the number of his stripes doubled. For many years after, this law was put in operation in the western part of Virginia; the magistrates themselves were in the habit of giving those who were brought before them on charges of small thefts, the liberty of being sent to jail or taking a whipping. The latter was commonly chosen and was immediately inflicted, after which the thief was ordered to clear out. In some instances the stripes were inflicted, not for the punishment of an offense, but for the purpose of extorting a confession from suspected persons. This was the torture of our early times, and, no doubt,

sometimes very unjustly inflicted. If a woman was given to tattling and slandering her neighbors, she was furnished, by common consent, with a kind of patent right to say whatever she pleased without being believed. Her tongue was then said to be harmless, or to be no scandal.

With all their rudeness, these people were given to hospitality, and freely divided their rough fare with a neighbor or stranger, and would have been offended at the offer of pay. In their settlements and forts, they lived, they worked, they fought and feasted, or suffered together in cordial harmony. They were warm and constant in their friendships. On the other hand, they were revengeful in their resentments. And the point of honor sometimes led to personal combats. If one man called another a liar, he was considered as having given a challenge, which the person who received it must accept, or be deemed a coward, and the charge was generally answered on the spot with a blow. If the injured person was decidedly unable to fight the aggressor, he might get a friend to do it for him. The same thing took place on a charge of cowardice, or any other dishonorable action—a battle must follow, and the person who made the charge must fight either the person against whom he made charge, or any champion who chose to espouse his cause. Thus circumstanced, our people in early times were much more cautious of speaking evil of their neighbors than they are at present.

Sometimes pitched battles occurred, in which time, place and seconds were appointed beforehand. I remember having seen one of those pitched battles in my father's fort when a boy. One of the young men knew very well beforehand that he should get the worst of the battle, and no doubt repented the engagement to fight; but there was no getting over it. The point of honor demanded the risk of battle. He got his whipping; they then shook hands, and were good friends afterward. The mode of single combats in those days was dangerous in the extreme; although no weapons were used, fists, teeth and feet were employed at will; but above all, the detestable practice of gouging, by which eyes were sometimes put out, rendered this mode of fighting frightful indeed. It was not, however, so destructive as the stiletto of an Italian, the knife of a Spaniard, the small sword of the Frenchman, or the pistol of the American or English duelist.

Instances of seduction and bastardy did not frequently happen in our early times. I remember one instance of the former, in which the life of the man was put in jeopardy by the resentment of the family to which the girl belonged. Indeed, considering the chivalrous temper of our people, this crime could not then take place without great personal danger from the brothers, or other relations of the victims of seduction; family honor being then estimated at a high rate.

I do not recollect that profane language was much more prevalent in our early times than at present. Among the people with

whom I was most conversant, there was no other vestige of the Christian religion than a faint observation of Sunday, and that merely as a day of rest for the aged, and a play for the young.

The first Christian service I ever heard was in the Garrison church, Baltimore county, Maryland, where my father had sent me to school. I was then about ten years old. The appearance of the church, the windows of which were Gothic, the white surplice of the minister, and the responses in the service, overwhelmed me with surprise.

Civilization.—The causes which led to the present state of civilization of the western country, are subjects which deserve some consideration in a work of this nature.

The state of society and manners of the early settlers, as presented in these notes, shows very clearly that their grade of civilization was indeed low enough. The descendants of the English cavaliers from Maryland and Virginia, who settled mostly along the rivers, and the descendants of the Irish, who settled the interior parts of the country, were neither of them remarkable for science or urbanity of manners. The former were mostly illiterate, rough in their manners, and addicted to the rude diversions of horse-racing, wrestling, jumping, shooting, dancing, etc. These diversions were often accompanied with personal combats, which consisted of blows, kicks, biting and gouging. This mode of fighting was what they called *rough* and *tumble*. Sometimes a previous stipulation was made, to use the fists only. Yet these people were industrious, enterprising, generous in their hospitality, and brave in the defense of their country.

The rude sports of former times have been discontinued. Athletic trials of muscular strength and activity, in which there certainly is not much of merit, have given way to the more noble ambition for mental endowments, and skill in useful arts. To the rude, and often indecent songs, but roughly and unskillfully sung, have succeeded the psalm, the hymn, and swelling anthem. To the clamorous boast, the provoking banter, the biting sarcasm, the horrid oath and imprecation have succeeded urbanity of manners, and course of conversation enlightened by science, and chastened by mental attention and respect. Above all the direful spirit of revenge, the exercise of which so much approximated the character of many of the first settlers of our country to that of the worst of savages, is now unknown.

The state of society and manners from the commencement of the settlements in this country, during the lapse of many years, owing to the sanguinary character of the Indian mode of warfare, and other circumstances, was in a state of retrogression.

The early introduction of commerce was among the first means of changing, in some degree, the exterior aspect of the population of the country, and giving a new current to public feeling and individual pursuit. The huntsman and warrior, when he had exchanged his hunter's dress for that of the civilized man, soon

lost sight of his former occupations, and assumed a new character and a new line of life; like the soldier, who, when he receives his discharge, and lays aside his regimentals, soon loses the feeling of a soldier, and even forgets, in some degree his manual exercise. Had not commerce furnished the means of changing the dresses of our people, and the furniture of their houses; had the hunting-shirt, moccasin and leggins, continued to be the dress of our men; had the three-legged stool, the noggin, the trencher and wooden bowl continued to be the furniture of our houses, our progress toward science and civilization would have been much slower. It may seem strange that so much importance is attached to the influence of dress in giving the moral and intellectual character of society.

The ultimate objects of civilization are the moral and physical happiness of man. To the latter, the commodious mansion house, with its furniture, contributes essentially. The family mansions of the nations of the earth, furnish the criterion of the different grades of their moral and mental condition. The savages universally live in tents, wigwams, or lodges covered with earth. Barbarians next to these, may indeed have habitations something better; but of no value and indifferently furnished. Such are the habitations of the Russian Tartar, and Turkish peasantry.

Such is the effect of a large, elegant, and well furnished house, on the feelings and deportment of a family, that if you were to build one for a family of savages, by the occupancy of it, they would lose their savage character; or if they did not choose to make the exchange of that character, for that of civilization, they would forsake it for the wigwam and the woods. This was done by many of the early stock of backwoodsmen, even after they built comfortable houses for themselves. They no longer had the chance of "a fall hunt." The woods' pasture was eaten up. They wanted "elbow room." They therefore sold out and fled to the forest of the frontier settlements, choosing rather to encounter the toil of turning the wilderness into fruitful fields a second time, and even risk an Indian war, rather than endure the inconveniences of a crowded settlement. Kentucky first offered a resting-place for those pioneers, then Indiana, and now the Missouri, and it cannot be long before the Pacific Ocean will put a final stop to the westward march of those lovers of the wilderness.

The ministry of the gospel has contributed, no doubt, immensely to the happy change which has been effected in the state of our western society. At an early period of our settlements, three Presbyterian clergymen commenced their clerical labors in our infant settlements. They were pious, patient, laborious men, who collected their people into regular congregations, and did all for them that their circumstances would allow. It was no disparagement to them that their first churches were the shady groves, and their first pulpits a kind of tent, constructed of a few rough slabs, and cov-

ered with clapboards. "He who dwelleth not exclusively in temples made with hands," was propitious to their devotions. From the outset, they prudently resolved to create a ministry in the country, and accordingly established little grammar schools at their own houses, or in their immediate neighborhoods. The course of education which they gave their pupils was indeed not extensive; but the piety of those who entered into the ministry, more than made up the deficiency.

At a later period the Methodist Society began their labors in the western parts of Virginia and Pennsylvania; their progress at first was slow, but their zeal and perseverance at length overcame every obstacle. The itinerant plan of their ministry is well calculated to convey the gospel throughout a thinly scattered population. Accordingly their ministry has kept pace with the extension of our settlements. The little cabin was scarcely built, and the little field fenced in, before these evangelical teachers made their appearance among them, collected them into societies, and taught them the worship of God. Had it not been for the labors of these indefatigable men, our country, as to a great extent of its settlements, would have been, at this day, a semi-barbaric region.

With the Catholics I have but little acquaintance, but have every reason to believe that, in proportion to the extent of their flocks they have done well. Their clergy, with apostolic zeal, but in an unostentatious manner, have sought out and ministered to their scattered flocks throughout the country; and, as far as I know, with good success. The Society of Friends in the western country are numerous, and their establishments in good order. Their habits of industry and attention to useful arts and improvements, are highly honorable to themselves, and worthy of imitation. The Baptists in the State of Kentucky took the lead in the ministry, and with great success. The German, Lutheran and Reformed Churches, have done well.

The Episcopal Church, which ought to have been foremost in gathering in their scattered flocks, have been the last, and done the least of any Christian community in the evangelical work. Taking the western country in its whole extent, at least one half of its population, was originally of Episcopalian parentage; but for want of a ministry of their own, have associated with other communities. They had no alternative but that of changing their profession, or living and dying without the ordinances of religion. It can be no subject of regret, that those ordinances were placed within their reach by other hands, while they were withheld by those, by whom, as a matter of right and duty, they ought to have been given. One single chorea episcopus, or suffragan bishop, of a faithful spirit, who twenty years ago (1804) should have "ordained them elders in every place" where they were needed, would have been the instrument of forming Episcopal congregations over a great extent of country, and which, by this time, would have become large, numerous, and respectable; but the opportunity was

/

neglected, and the consequent loss to this Church is irreparable. So total a neglect of the spiritual interests of so many valuable people, for so great a length of time, by a ministry so near at hand, is a singular and unprecedented fact in ecclesiastical history, the like of which never occurred before.

I beg that it may be understood, that with the distinguishing tenets of our religious societies, I have nothing to do, nor yet with the excellencies or defects of their ecclesiastical institutions. They are noticed on no other ground than that of their respective contributions to the science and civilization of the country. The last, but not the least of the means of our present civilization, are our excellent forms of government, and the administration of the laws.

ORIGIN OF CAMP-MEETINGS.

THE year 1799 was distinguished for the commencement of those great revivals of religion in the West, which introduced the practice of holding "camp-meetings" in the United States. This work commenced under the united labors of two brothers named M'Ghee, one a Presbyterian, and the other a Methodist preacher—the one settled over a congregation in Sumner, and the other in Smith county, West Tennessee.

In the year 1799 they set off on a tour together, through "*the Barrens*" toward Ohio, and on their way stopped at a settlement on Red River, to attend the administering of the sacrament in the congregation of the Rev. Mr. M'Gready, a Presbyterian clergyman. The M'Ghees and others preached on this occasion, and the congregation were astonishingly affected. Such was the movement among the people, evidently under the impulses of the Divine Spirit, that though Messrs. M'Gready, Hoge, and Rankin left the house, the M'Ghees continued in their places. William M'Ghee soon felt such a power come over him that he, not seeming to know what he did, left his seat and sat down on the floor, while John sat trembling under a consciousness of the power of God. In the meantime, there was great solemnity and weeping all over the house. He was expected to preach, but could not from excess of emotion.

The good effects resulting from this meeting, thus casually convened, induced the M'Ghees to appoint another on Muddy River. There a vast concourse of people assembled under the foliage of the trees, and continued their religious exercises day and night. This novel way of worship excited great attention. In the night the grove was illuminated with lighted candles, lamps, or torches. This, together with the stillness of the night, the solemnity which rested on every countenance, the pointed and earnest manner with which the preachers exhorted the people to repentance, prayer, and faith produced the most awful sensations in the minds of all pre-

sent, and it resulted in the conversion of not less than one hundred souls. A still greater meeting of the same kind was held soon after on Desha's Creek, near the Cumberland River, at which many thousands attended. At these gatherings, the people are described by an eye witness, as falling under the power of the word, "like corn before a storm of wind," and that many thus affected, "arising from the dust with Divine glory beaming upon their countenances," gave utterance to strains of ecstatic gratitude. In the meantime, the numbers who attended them continually increased, drawn together by various motives—the desire of benefit, the gratification of curiosity, and some to arm themselves with arguments of resistance to their progress; but many of those who thus "came to mock, remained to pray."

In 1801, the numbers who attended those which were held in Kentucky, had become immense. At one held on Cabin Creek, a Presbyterian minister who was present and took an active part, estimated the number at not less than twenty thousand. At this great meeting, the Methodists and Presbyterians united their efforts, seeming to bear down all opposition. The scene is represented as having been indescribably awful.

Few if any escaped without being affected. Such as tried to run from it, were frequently struck on the way, or impelled by some alarming signal to return. No circumstance at this meeting appeared more striking, than the great numbers that fell * on the third night, and remained unconscious of external objects for hours together. To prevent their being trodden under foot by the multitude, they were collected together, and laid out in order, on two squares of the meeting-house, until a considerable part of the floor was covered, where they remained in charge of their friends, until they should pass through the strange phenomena of their conversion. But the great meeting at *Cane Ridge*, exceeded all. The number that fell at this meeting, was reckoned at about three thousand, among whom were several Presbyterian ministers, who, according to their own confession, had hitherto possessed only a speculative knowledge of religion. There, the formal professor, and the deist, and the intemperate, met with one common lot, and confessed with equal candor, that they were destitute of the true knowledge of God, and strangers to the religion of Jesus Christ.

In consequence of such a vast assemblage of people, it was impossible for one person to address them; hence, they were divided into several groups, and addressed by as many different speakers, while the whole grove at times, became vocal with the praise of God, and at others, pierced with the cries of distressed penitents. As before stated, the effect was peculiarly striking at night. The ranges of tents—the fires reflecting lights through the branches of the trees—the candles and lamps, illuminating the entire encamp-

* See page 205; Article, "Strange Mental and Physical Phenomena."

ment—hundreds of immortal beings moving to and fro, some preaching—some praying for mercy—others praising God—all presented a scene indescribably solemn and affecting.

These meetings soon spread through all the settlements in the West, and such was the eagerness of the people to attend, that entire neighborhoods were forsaken, and the roads literally crowded by those pressing forward on their way to the groves. As the Methodists and Presbyterians usually united in these gatherings, they took the name of "*General Camp-Meetings*." The prominent clergymen on these occasions, were the M'Ghees,—the Rev. Messrs. Gready, Hoge and Rankin, of the Presbyterian Church, and William M'Kendree, William Burke, John Sale, Benjamin Lakin and Henry Smith, of the Methodist Church.

From the foregoing, it will be seen that camp-meetings first originated in the West. They were not the result of a previously digested plan—nor did they commence with the Methodists, but upon a sacramental occasion among the Presbyterians, where there was such an exhibition of the Divine Spirit, that the meeting was protracted to an unusual length, which, being noised abroad, brought others to the place, and finally, in such numbers that no house could hold them. This induced them to go into the field, erect temporary shelters, and bring provision for their sustenance; and finding that God so abundantly blessed them, they were continued until they became general among the Methodists throughout the Union.

LEWIS AND CLARKE'S AND PIKE'S EXPLORING EXPEDITIONS.

Expedition of Lewis and Clarke.—Just before the transfer of Louisiana to the United States, in 1803, President Jefferson was preparing to have explored what now comprises the northwestern part of our country, of which then but little was known. In January, 1803, Congress having approved of his suggestions, he commissioned Captains Meriwether Lewis and William Clarke, to explore the Missouri and its principal branches to their sources, and then to seek and trace to its termination in the Pacific, some stream which might give the most direct and practicable water communication across the continent, for the purposes of commerce. Other persons were, at the same time, appointed to examine the Upper Mississippi and its principal western tributaries below the Missouri; exact information being desired as soon as possible of the newly acquired territories from France, that power having previously possessed the country west of the Mississippi, under the general name of Louisiana.

Shortly after Lewis had received his instructions, the news of the conclusion of the treaty for the cession of Louisiana, reached the United States. In May, 1804, the party of Lewis and Clarke

commenced the ascent of the Missouri in boats. Their ascent being slow, they did not arrive at the country of the Mandan Indians, sixteen hundred miles from the Mississippi, near lat. 48 deg., until the latter part of October.

Remaining in their encampment in the Mandan country until the 7th of April, following, Lewis and Clarke, with thirty men, commenced their voyage westward up the Missouri, and about the 1st of May, reached the mouth of the principal branch, called by the French traders, the *Roche Jaune*, or Yellow Stone River. Thence continuing their progress westward on the main stream, their navigation was arrested on the 13th of June, by the *Great Falls of the Missouri*, a series of cataracts extending about ten miles in length, in the principal of which, the whole river rushes over a precipice of rock eighty-seven feet in height. Again embarking in canoes, they on the 19th of July, passed through the *Gates of the Rocky Mountains*, where the Missouri, emerging from that chain, runs for six miles in a narrow channel between perpendicular, black rocky walls of twelve hundred feet in height. Beyond this, they ascended its largest source, named by Lewis, Jefferson River, near lat. 44 deg., where the navigation of the Missouri ends near three thousand miles from its entrance into the Mississippi. While the canoes were ascending Jefferson River, Lewis and Clarke, with some of their men, proceeded through the mountains, and soon found streams flowing to the west, and meeting several parties of Indians belonging to a nation called Shoshonee, they were satisfied from their accounts, that those streams were the head waters of the Columbia. They then rejoined their men at the head of Jefferson, and having *cached* (concealed in pits) their canoes and goods, and procured some Shoshonees for guides, and some horses, the whole party pursued their journey overland, and on the 30th of August, entered the Rocky Mountains.

Up to this time their difficulties and privations were comparatively small; but during the three weeks they were passing through the mountains, they underwent every suffering which hunger, cold, and fatigue could impose. The mountains were high, and the passes through them rugged and in many places covered with snow; and their food consisted of berries, dried fish, and the meat of dogs or horses, of all which the supplies were scanty and precarious.

About four hundred miles by their route from Jefferson River they reached the Kooskooske, and on the 7th of October, began its descent in canoes which they constructed. In three days they entered the principal southern branch of the Columbia, which they named Lewis, and in seven more reached its junction with its larger northern branch, which was called by them Clarke. They were then fairly launched on the *Great River of the West*, and passing down it through many dangerous rapids, they, on the 31st, arrived at the *Falls of the Columbia*, where it rushes through the

lofty chain of mountains nearest the Pacific. On the 15th of November, they landed on Cape Disappointment, at the mouth of the Columbia, after having passed over about six hundred miles on its waters, and reaching a point of more than four thousand miles from the mouth of the Missouri.

The winter, or rather rainy season, soon setting in, they built a dwelling in that vicinity, which they named *Fort Clatsop*, where they remained until March 23d, 1806. Then they commenced their return by ascending the Columbia in their canoes. Proceeding carefully up the stream they discovered the *Cowelitz* and the *Willamette*, the latter now noted for having on its banks the most flourishing settlements in Oregon.

At the Falls of the Columbia they abandoned their canoes, and proceeded on horses to their point of embarkation on the *Kooskooske* in the preceding year; thence due eastward through the Rocky Mountains to Clarke River, which flows for some distance in a northerly direction from its sources before turning southward to join the other branches of the Columbia. There, on the 3d of July, in latitude forty-seven degrees, Lewis and Clarke separated to meet at the mouth of Yellow Stone.

Lewis with his party proceeded northward some distance down the Clarke, and then, quitting it, crossed the Rocky Mountains to the headwaters of the *Maria*, which empties into the Missouri just below the falls. There they met a band of Indians belonging to the numerous and daring race, called the *Blackfoot*, who infest the plains at the base of the mountains, and are ever at war with all other tribes. These savages attempted to seize the rifles of the Americans, and Lewis was obliged to kill one of them before they desisted. The party then hastened to the Falls of the Missouri, and thence floated down to the mouth of the Yellow Stone, which is scarcely inferior in length to the main branch of the Missouri.

Meanwhile, the party under Clarke rode southward up the Clarke to its sources; and after exploring several passes in the mountains between that and the headwaters of the Yellow Stone, they embarked on it in canoes, and descending, joined Lewis and his men at its mouth on the 12th of August. From thence the whole body floated down the Missouri, and on the 23d of September, 1806, arrived in safety at St. Louis after an absence of more than two years, during which they had traveled over nine thousand miles.

The Missouri had been ascended to the mouth of the Yellow Stone by the French and Spanish Indian traders, long before this expedition, but no correct information had been obtained of the river and country. With regard to the country between the Great Falls of the Missouri and those of the Columbia, we have no accounts earlier than those furnished by this exploring expedition. Their journal is still the principal source of information, respecting the geography, natural history, and the aboriginal inhabitants of that region.

Politically, the expedition was an announcement to the world

of the intentions of the American government to occupy and settle the countries explored, and they thus virtually incurred the obligation to prosecute and fulfill the great ends for which the labors of Lewis and Clarke were preparatory.

A few years since there was residing at Brown's Hole, in Oregon, an old Shoshonee Indian, who was the first of his tribe who saw the cavalcade of Messrs. Lewis and Clarke, on the headwaters of the Missouri, in 1805. He appears to have been galloping from place to place in the office of sentinel to the Shoshonee camp, when he suddenly found himself in the very presence of the whites. Astonishment fixed him to the spot. Men with faces as pale as ashes had never been seen by him or his nation. "The head rose high and round, the top flat; it jutted over the eyes in a thin rim; their skin was loose and flowing, and of many colors." His fears at length overcoming his curiosity, he fled in the direction of the Indian encampment. But being seen by the whites, they pursued and brought him to their camp, exhibited to him the effect of their fire-arms, loaded him with presents, and let him go. Having arrived among his own people, he told them he had seen men with faces pale as ashes, who were makers of thunder and lightning, etc. This information astounded the whole tribe. They had lived many years, their ancestors had lived many more, and there were many legends which spoke of many wonderful things, but a tale like this they had never before heard. A council was, therefore, held to consider the matter. The man of strange words was summoned before it, and he rehearsed in substance what he had before told others, but was not believed. "All men were red, and therefore, he could not have seen men as pale as ashes. The Great Spirit made the thunder and lightning; he, therefore, could not have seen any men of any color that could produce it. He had seen nothing—he had lied to his chief, and should die." Upon this, the culprit produced some presents which he had received from the pale men. These being quite as new to them as pale faces were, it was determined "that he should have the privilege of leading his judges to the place where he had declared he had seen these strange people; and if such were found there, he should be exculpated; if not, these presents were to be considered as conclusive evidence that he dealt with evil spirits, and that he was worthy of death by the arrows of his kinsfolks." The pale men—the thunder makers were found, and were witnesses of the poor fellow's story. He was released, and was ever after much honored and loved by his tribe and every white man in the mountains. He was then about eighty years old, and poor, but was never permitted to want.

Pike's Expedition.—During the absence of Lewis and Clarke, the United States prosecuted other explorations in different parts of Louisiana. Lieutenant Z. M. Pike—afterward the celebrated General Pike, who fell at York, Upper Canada, in 1813—was sent, in 1805, to explore the sources of the Mississippi. Having set out

late in the season, he proceeded to the mouth of the Crow Wing, where, winter having overtaken him, he erected a blockhouse for the protection of his men and stores, and proceeded in snow-shoes with a small party to Leech Lake and other places in that vicinity, and returned on the opening of navigation in the spring, without having fully accomplished the objects of his journey. During his absence he purchased of the Indians the site where Fort Snelling, the first American establishment in Minnesota, was founded in 1819.

In the year 1806, he was sent on another exploring expedition by the United States Government with a party of men, in the course of which he traveled southwestward from the mouth of the Missouri up the Arkansas, with directions to pass to the sources of that stream, for which those of the Canadian were then mistaken. He, however, even passed around the head of the latter, and crossing the mountain with an almost incredible degree of peril and suffering, descended upon the Rio del Norte with his little party, then but fifteen in number. Believing himself now upon Red River within the then assumed bounds of the United States, he erected a small fortification for his company until the opening of the spring of 1807 should enable him to continue his descent to Natchitoches.

As he was within the Mexican Territory, however, and but about seventy miles from the northern settlements, his position was soon discovered, and a force sent out to take him into Santa Fe, which, by a treacherous manuever, was effected without opposition. The Spanish officer assured him that the governor, learning that he had missed his way, had sent animals and an escort to convey his men and baggage to a navigable port on Red River (Rio Colorado), and that his excellency desired very much to see him at Santa Fe, which might be taken on their way. As soon, however, as the governor had him in his power, he sent him with his men to the Commandant-General at Chihuahua, when most of his papers were seized and he and his party were sent under an escort, via San Antonio de Bexar, to the United States.

The Red and Washita Rivers were at the same time explored to a considerable distance from the Mississippi, by Messrs. Dunbar, Hunter, and Sibley, whose journals, as well as those of Pike, Lewis, and Clarke, were subsequently published, and contain many interesting descriptions of those parts of America.

Thus within three or four years after Louisiana came into the possession of the United States, it ceased to be an unknown region, and the principal features of the country drained by the Columbia were displayed.

ADVENTURE OF COLTER.

ON the arrival of the exploratory party of Lewis and Clarke at the headwaters of the Missouri, Colter, one of the guides, obtained permission for himself and another hunter, by the name of Potts, to remain awhile and hunt for beaver. Aware of the hostility of the Blackfoot Indians, one of whom had been killed by Lewis, they set their traps at night and took them up early in the morning, remaining concealed during the day.

They were examining their traps early one morning, in a creek which they were ascending in a canoe, when they suddenly heard a great noise, resembling the trampling of animals; but they could not ascertain the fact, as the high perpendicular banks on each side of the river impeded their view. Colter immediately pronounced it to be occasioned by Indians, and advised an instant retreat, but was accused of cowardice by Potts, who insisted the noise was occasioned by buffaloes, and they proceeded on. In a few minutes afterward, their doubts were removed by the appearance of about five or six hundred Indians on both sides of the creek, who beckoned them to come ashore. As retreat was now impossible, Colter turned the head of the canoe to the shore, and at the moment of its touching, an Indian seized the rifle belonging to Potts; but Colter, who was a remarkably strong man, immediately retook it and handed it to Potts, who remained in the canoe, and on receiving it pushed off into the river. He had scarcely quitted the shore when an arrow was shot at him, and he cried out, "Colter, I am wounded." Colter remonstrated with him on the folly of attempting to escape, and urged him to come ashore. Instead of complying, he instantly leveled his rifle at an Indian and shot him dead on the spot. This conduct situated as he was, may appear to have been an act of madness, but it was doubtless the effect of sudden, but sound reasoning; for if taken alive, he must have expected to have been tortured to death, according to the Indian custom, and in this respect, the Indians in this region, excelled all others in the ingenuity they displayed in torturing their prisoners. He was instantly pierced with arrows so numerous, that, to use the language of Colter, "he was made a riddle of."

They now seized Colter, stripped him entirely naked, and began to consult on the manner in which he should be put to death. They were first inclined to set him up as a mark to shoot at, but the chief interfered, and seizing him by the shoulder, asked him if he could run fast? Colter, who had been some time among the Kee Katsa, or Crow Indians, had in a considerable degree acquired the Blackfoot language, and was also well acquainted with Indian customs. He knew that he had now to run for his life, with the dreadful odds of five or six hundred against him, and these armed Indians; he therefore cunningly replied that he was a very bad

runner, although in truth he was considered by the hunters as remarkably swift.

The chief now commanded the party to remain stationary, and led Colter out on the prairie three or four hundred yards and released him, bidding him *to save himself if he could*. At that instant the warhoop sounded in the ears of poor Colter, who, urged with the hope of preserving life, ran with a speed at which he himself was surprised. He proceeded toward Jefferson's Fork, having to traverse a plain six miles in breadth, abounding with the prickly pear, on which he every instant was treading with his naked feet. He ran nearly half-way across the plain before he ventured to look over his shoulder, when he perceived that the Indians were very much scattered, and that he had gained ground to a considerable distance from the main body; but one Indian, who carried a spear, was much before all the rest, and not more than a hundred yards from him.

A faint gleam of hope now cheered the heart of Colter; he derived confidence from the belief that escape was within the bounds of possibility, but that confidence was nearly fatal to him; for he exerted himself to such a degree that the blood gushed from his nostrils, and soon almost covered the forepart of his body. He had now arrived within a mile of the river, when he distinctly heard the appalling sounds of footsteps behind him, and every instant expected to feel the spear of his pursuer. Again he turned his head and saw the savage not twenty yards from him. Determined, if possible, to avoid the expected blow, he suddenly stopped, turned round and spread out his arms. The Indian, surprised at the suddenness of the action, and perhaps at the bloody appearance of Colter, also attempted to stop; but exhausted with running, he fell while attempting to throw his spear, which stuck in the ground and broke in his hand. Colter instantly snatched up the pointed part, with which he pinned him to the earth, and then continued his flight.

The foremost of the Indians, on arriving at the place, stopped until others came up to join them and then gave a hideous yell. Every moment of this time was improved by Colter, who although fainting and exhausted, succeeded in gaining the skirting of the cotton-wood trees on the borders of the Fork, to which he ran and plunged into the river. Fortunately for him a little below this place was an island, against the upper point of which a raft of drift timber had lodged; he dived under the raft, and after several efforts got his head above the water, among the trunks of trees covered over with smaller wood to the depth of several feet. Scarcely had he secured himself when the Indians arrived on the river, screeching and yelling, as Colter expressed it, "like so many devils."

They were frequently on the raft during the day, and were seen through the chinks by Colter, who was congratulating himself on his escape, until the idea arose that they might set the raft on fire.

In horrible suspense he remained until night, when hearing no more from the Indians, he dived from under the raft and swam instantly down the river to a considerable distance, when he landed and traveled all night. Although happy in having escaped from the Indians, his situation was still dreadful; he was completely naked under a burning sun; the soles of his feet were filled with the thorns of the prickly pear; he was hungry and had no means of killing game, although he saw abundance around him and was at a great distance from the nearest settlement. Almost any man but an American hunter would have despaired under such circumstances. The fortitude of Colter remained unshaken. After seven days' sore travel, during which he had no other sustenance than the root, known by naturalists under the name of *psoralea esculenta*, he at length arrived in safety at Lisa's Fort, on the Big Horn branch of the Roche Jaune or Yellow Stone River.

The Flathead Indians who reside in Oregon, and the Blackfoot tribe who hunt at the eastern base of the Rocky Mountains, are almost continually at war with each other. An English traveler who remained a considerable time among the former, has given a description of the method of torturing their prisoners. A chief of the Blackfoot tribe having been taken captive in one of their wars, was condemned to death; and the Englishman repaired to camp to witness the frightful spectacle. The prisoner was fastened to a tree. The Flatheads, after heating an old gun-barrel red hot, burnt with it successively his legs, thighs, stomach, cheeks, and belly; and then cut the flesh around his nails, which they tore out; and afterward cut off his fingers joint by joint.

During this horrible torment the prisoner did not shrink in the least, nor testify the slightest emotion. Instead of crying for mercy and uttering groans, he endeavored to excite the barbarous ingenuity of his executioners by taunts and the most insulting reproaches. One of the Flatheads rushed upon him, and in an instant with his knife scooped out one of his eyes and clove his nose in two. But the poor fellow did not desist from his provocations:—"I killed your brother," he cried. "I tore off the gray scalp of your father." The warrior to whom he spoke again rushed upon him and tore off his scalp, and was about to plunge a knife into his heart when the voice of his chief forbade him.

With his naked skull, his cloven nose, and the blood streaming from the socket of his eye, the intrepid Blackfoot offered a hideous spectacle; notwithstanding which, in this terrible condition, he continued to heap reproaches and outrageous insults upon his foes. "It was I," said he to the chief, "who took your wife prisoner! We tore out her eyes and tongue! We treated her like a dog! Forty of our young warriors,"—He had not time to finish what he was going to say; for at the mention of his wife the fury of the chief broke through all bounds, and seizing his rifle he put an end at once to the insults which he, the prisoner, uttered, and the sufferings he endured.

These cruelties were even surpassed by those that were exercised on the female prisoners; and it must be owned that the Flathead women showed a more fiendish barbarity than the men. The details of the tortures which they inflicted are too horrible to be described, save with a pen dipped in blood.

BURR'S CONSPIRACY.

IN 1805, Aaron Burr first made his appearance in the West. With a conscience racked with remorse for the murder of Hamilton in a duel, and politically disgraced by his quarrel with President Jefferson, he sought the West to bury his anguish and disgrace in active schemes of unhallowed ambition. At this time, the affairs of the United States with Spain were in an embarrassing state. In the spring of 1806, their forces advanced to the Sabine, and General Wilkinson, commander of the United States troops in Louisiana, had orders to repel them if they should cross the river. At this time, Burr again appeared in the West, passing most of his time at Blannerhasset's Island, but being seen in Kentucky and Tennessee. His plans appear to have been threefold:

1. To ascertain the sentiments of the people of the West upon the subject of a separation from the Atlantic States, and, if favorable, to have attempted to erect a separate republic in the West, of which he was to be the head, and New Orleans the capital.

2. To raise a force and make arrangements for a private expedition against Mexico and the Spanish provinces, in the event of a war between the United States and Spain, which at that time seemed inevitable.

3. In the event of the failure of both of these measures, to purchase a tract of land of Baron Bastrop, lying on the Washita River, in Louisiana, upon which he contemplated the establishment of a colony of wealthy and intelligent individuals, where he might rear around him a society remarkable for its elegance and refinement.

The unsettled relations with Spain presented a specious cloak to his enterprise in that quarter, and enabled him to give to each person addressed such representations of his plans as best suited their character. To the daring youth of the West, desirous of military adventure, he could represent it as an expedition against a nation with whom the United States would shortly be at war—that government would *connive* at it, but could not openly countenance it until hostilities actually commenced. There is but little doubt but that many concurred in the enterprise without being aware of its treasonable character, while to others all his schemes were exposed in their full deformity.

In the prosecution of his object, he applied himself with all his great powers of address, to any one who would be useful to him in

his schemes. Among a large number of persons whom he enlisted, was Herman Blannerhasset, an Irish gentleman of wealth, residing on a beautiful island on the Ohio, twelve miles below Marietta. He moulded him to his purpose, and obtained a complete command of his ample fortune.

The scheme of separation from the Atlantic States had been too much agitated in Kentucky, not to have left some materials for Burr to rally upon, and he neglected no opportunity to work upon the fragments of the old party. Not only in that State, but in every State and Territory in the West, from Western Pennsylvania down to Louisiana, he gained a large number of adherents to the cause, among whom were some of the leading men of the country.

During the summer of 1806, the public mind in the West became agitated by rumors of secret expeditions and conspiracies, in which Burr and others were implicated, but all were wrapped in mystery and doubt. In the following November, Burr was seized at Lexington, Kentucky, and arraigned before the United States Court, to answer to a charge of high misdemeanor, in organizing a military expedition against a power with whom the United States were at peace. He was defended by the Honorable Henry Clay, on his first assuring him upon *his honor*, that he was engaged in no design contrary to the laws and peace of the country. The arrest was premature, and owing to the absence of important witnesses, he was acquitted. Yet, at that very time, an armed force in his service occupied Blannerhasset's Island, and a large number of boats had been built on the Muskingum, and were then at Marietta, laden with provisions and military stores.

All danger of collision with Spain had, ere this, been removed; but Burr, notwithstanding, adhered to his original design. President Jefferson, who had been kept fully advised by General Wilkinson of Burr's movements, on the 25th of November, issued a proclamation denouncing the enterprise, and warning the West against it. This proclamation reached Ohio about the 1st of December, and soon after, by the orders of the governor of that State, the boats of Burr on the Muskingum were seized. At the same time, the Virginia militia, of Wood county, lying opposite Blannerhasset's Island, took possession of the mansion of Blannerhasset. The owner, however, succeeded in effecting his escape down the Ohio in one of his boats. Burr, in the meanwhile, had gone to Nashville; but before the proclamation had reached Tennessee had descended the Cumberland, with two boats laden with provisions and a few adherents. At the mouth of that river his forces congregated, and from thence they proceeded down the Mississippi, in a flotilla of eleven boats.

His adherents at this time had dwindled to but a comparatively small number. A part of his original confederates had been engaged simply as settlers of Bastrop's lands, but the greater number were engaged under the express assurance that the projected enter-

prise was against Mexico, and secretly authorized by government. Many expressly enlisted in the name of the United States. The proclamation, as it reached the different parts of the West, undeceived both these classes and, of course, drew them off from any participation in the enterprise.

The West had now become thoroughly aroused to the true nature of the conspiracy. The authorities of the different States and Territories on the Ohio and Mississippi had ordered out the militia for the apprehension of the parties; and from Pittsburgh to the Gulf, the most rigid measures had been adopted to give an effectual check to the further progress of the expedition.

General Wilkinson, who commanded the United States forces in the West, had been Burr's confidant in his schemes. Burr and his principal confederates carried on a continual correspondence with that officer in cipher, during the formation and execution of his plans. What Wilkinson's original intentions were, is a matter of conjecture; but it is certain that he acted treacherous toward Burr, as during this time, he informed Jefferson of all the movements of the conspirators, and became, at length, the most active person in arresting those who were supposed to have been connected with it. It is probable that he first favored Burr from ambitious motives, determining to be governed by circumstances in his ulterior movements. If war should occur with Spain, then, as a military man, there would be an opportunity, in connection with Burr, to win distinction in a campaign against Mexico; but if not, there was a chance of his gaining eclat by exposing a conspiracy dangerous to the welfare of his country.

Confident of the aid of Wilkinson and of the forces under his command, Burr continued his exertions, notwithstanding all prospects of a war with Spain had ceased, and in spite of the proclamation of the President and the efforts of the governors of the various States and Territories of the West to deter him.

In January (1807) the flotilla of Burr had arrived at Bayou Pierre, on the Lower Mississippi. He was there seized by the order of Cowles Mead, the acting Governor of Mississippi, and conducted to the town of Washington. Burr, shortly after, managed to escape from custody, and a reward of two thousand dollars was offered for his apprehension. In the meantime, several arrests of the supposed accomplices of Burr were made at Fort Adams and New Orleans. Among these were Bollman (the celebrated deliverer of Lafayette), Ogden, Swartwout, Dayton, Smith, Alexander, and Gen. Adair, against whom the most rigid and unjustifiable authority was exercised by Gen. Wilkinson, in many cases upon bare suspicion.

Late at night, about the 1st of February, a man in the garb of a boatman, with a single companion, arrived at the door of a small log tavern, in the backwoods of Alabama, and inquired the way to a Col. Hinson's, who resided in the neighborhood. Col. Nicholas Perkins observed by the light of the fire, that the stranger, although

coarsely dressed, possessed a countenance of unusual intelligence and an eye of sparkling brilliancy. The tidy boot, which his vanity could not surrender with his other articles of finer clothing, attracted Perkins' attention and led him truly to conclude, that the mysterious stranger was none other than the famous Col. Burr, described in the proclamation of the governor.

That night Perkins started for Fort Stoddart, on the Tombigbee, and communicated his suspicions to the late General Edmund P. Gaines, then the lieutenant in command. The next day, accompanied by Perkins and a file of mounted soldiers, Gaines started in pursuit of Burr, and arrested him on his journey. Burr attempted to intimidate Gaines, but the young officer was firm, and told him he must accompany him to his quarters, where he would be treated with all the respect due the ex-Vice President of the United States.

About three weeks after, Gaines sent Burr a prisoner to Richmond with a sufficient guard, the command of which was given to Perkins. They were all men whom Perkins had selected, and upon whom he could rely in every emergency. He took them aside and obtained the most solemn pledges, that upon the whole route they would hold no interviews with Burr, nor suffer him to escape alive. Perkins knew the fascinations of Burr, and he feared his familiarity with his men—indeed, he feared the same influences upon himself.

Each man carried provisions for himself and some for the prisoner. They were all well mounted and armed. On the last of February, they set out on their long and perilous journey. To what an extremity was Burr now reduced! In the boundless wilds of Alabama, with none to hold converse; surrounded by a guard to whom he dared not speak; a prisoner of the United States for whose liberties he had fought; his fortune swept away; the magnificent scheme for the conquest of Mexico broken up; slandered and hunted down from one end of the Union to another! These were considerations to crush an ordinary man; but his was no common mind, and the characteristic fortitude and determination, which had ever marked his course, still sustained him in the darkest hour.

In their journey through Alabama they always slept in the woods, and after a hastily prepared breakfast it was their custom to again remount and march on in gloomy silence. Burr was a splendid rider, and in his rough garb, he bestrode his horse as elegantly, and his large dark eyes flashed as brightly as though he were at the head of his New York regiment. He was always a hardy traveler, and though wet for hours together with cold and drizzling rains, riding forty miles a day and at night stretched on a pallet upon the ground, he never uttered one word of complaint.

A few miles beyond Fort Wilkinson they were, for the first time, sheltered under a roof—a tavern kept by one Bevin. While they were seated around the fire awaiting breakfast, the inquisitive host

inquired "if *the traitor* Burr had been taken?" "Was he not a bad man?" "Wasn't everybody afraid of him?" Perkins and his party were very much annoyed, and made no reply. Burr was sitting in the corner by the fire, with his head down, and after listening to the inquisitiveness of Bevin until he could endure it no longer; he raised himself up, and planting his fiery eyes upon him, said:

"I am Aaron Burr; what is it you want with me?"

Bevin, struck with his appearance, the keenness of his look, and the solemnity and dignity of his manner, stood aghast, and trembled like a leaf. He uttered not another word while the guard remained at his house.

When they reached the confines of South Carolina, Perkins watched Burr more closely than ever, for his son-in-law, Colonel, afterward Governor Alston, a gentleman of talents and influence, resided in this State. He was obliged, in a great measure, to avoid the towns for fear of a rescue. Before entering the town of Chester, in that State, the party halted, and surrounding Burr proceeded on, and passed near a tavern where many persons were standing, while music and dancing were heard in the house. Burr conceived it a favorable opportunity for escape, and suddenly dismounting, exclaimed:

"I am Aaron Burr, under military arrest, and claim protection from the civil authorities!"

Perkins leaped from his horse, with several of his men, and ordered him to remount.

"I will not!" replied Burr.

Not wishing to shoot him, Perkins threw down his pistols, and being a man of prodigious strength, and the prisoner a small man, seized him around the waist, and placed him in the saddle, as though he was a child. Thomas Malone, one of the guard, caught the reins of the bridle, slipped them over the horse's head, and led him rapidly on. The astonished citizens, when Burr dismounted, and the guards cocked their pistols, ran within the piazza to escape from danger.

Burr was still to some extent, popular in South Carolina; and any wavering or timidity on the part of Perkins, would have lost him his prisoner; but the celerity of his movements, gave the people no time to reflect, before he was far in the outskirts of the village. Here the guard halted. Burr was highly excited; he was in tears! The kind-hearted Malone also wept, at seeing the uncontrollable despondency of him who had hitherto proved almost iron-hearted. It was the first time any one had ever seen Aaron Burr unmanned.

On Burr's arrival at Richmond, the ladies of the city vied with each other in contributing to his comfort. Some sent him fruit; some clothes; some one thing; some another.

Burr was tried before the Supreme Court of the United States, at Richmond, for treason, and found not guilty, though the popular

voice continued to regard him as a traitor. Failing to convict the principal, the numerous confederates of Burr were never brought to trial, and were discharged from custody.

After his trial, Burr went abroad, virtually a banished man. He was still full of his schemes against Mexico, and, unsuccessfully, attempted to enlist England, and then France, in these projects. Here his funds failed. He had no friends to apply to, and was forced to borrow on one occasion, a couple of sous from a cigar woman, on the corner of the street.

At last, he returned to New York, but in how different a guise from the days of his glory! No cannon thundered at his coming; no crowd thronged along the quay. Men gazed suspiciously upon him, as he walked along, or crossed the street to avoid him, as one having the pestilence. But he was not, he thought, wholly destitute. His daughter, who devotedly clung to him through all his trials, still lived; his heart yearned to clasp her to his bosom. She left Charleston, South Carolina, accordingly, to meet him. But although more than thirty years have elapsed, no tidings of the pilot boat, on which she sailed, have ever been received. Weeks grew into months, and months glided into years, but her father and husband watched in vain for her coming. Whether the vessel perished by conflagration—whether it foundered in a gale, or whether it was taken by pirates, and all on board murdered, will never be known until the great day, when the sea shall give up its dead.

It is said that this blow broke the heart of Burr, and that, though in public he maintained a proud equanimity, in private, tears forced themselves down his furrowed cheeks. He lived thirty years after this event; but in his own words, "felt severed from the human race." He had neither brother nor sister, nor lineal descendant. No man ever called him by the endearing name of friend. The weight of fourscore years was on his brow. He was racked by disease. At last death, so long desired, came, but, it is said, in a miserable lodging and alone. Was there ever such a retribution?

Scarcely less melancholy was the fate of his principal victim, Herman Blannerhasset. This gentleman was born in England, of Irish parents, in 1767, and was educated for the bar. He married Miss Adeline Agnew, a grand-daughter of the General Agnew, who was with Wolfe at Quebec. She was a lady of fine accomplishments, of great personal beauty, and fully merited the celebrated encomium of Wirt. Strongly imbued with republican principles, Blannerhasset emigrated to the United States, and commenced improvements about the year 1798, upon the beautiful island which bears his name, where he reared a mansion which became the abode of elegant hospitality. He was a fine scholar, and refined in taste and manners. Possessing an ample fortune, a beautiful and accomplished wife, and children just budding into

life, he seemed surrounded with everything which can make existence desirable and happy.

In 1805, Aaron Burr sailing down the Ohio landed, uninvited, on the island, where he was received with frank hospitality. He again visited the island, and enticed Blannerhasset into his plans. When the Virginia militia took possession of the island in 1806, the mob spirit ran riot, and great injury was done to the grounds, and the dwelling, and its furniture. In 1811, the work of devastation was completed by a fire, which destroyed the mansion.

At the time of the trial of Burr, Blannerhasset was arrested, and placed in the penitentiary at Richmond. When he was set at liberty, he was nearly ruined in fortune by the advances he had made to Burr. He then settled on a cotton plantation in Mississippi, and there was a prospect of his being enabled to regain his lost fortune; but the war of 1812 broke out, and cotton falling to a merely nominal price, and his numerous creditors pressing upon him, he was about to despair, when an old friend, the acting governor of Canada, hearing of his critical situation, offered him a judgeship in one of the provincial courts. He accordingly emigrated to Canada, and upon arriving there found that the capriciousness of the British ministry had removed his friend from office. He was now hopelessly cast upon the world, at an advanced age, without health and energy, and almost entirely destitute. As a last resort, he sailed for Europe to prosecute a reversionary claim, still existing in Ireland, regarded by him with indifference in the days of his affluence.

Through the influence of friends also, he hoped to obtain an office under the English government, by which he might more readily obtain the means of conducting his suit. He applied for an office to Lord Anglesey, but he coldly repelled the solicitations of his old schoolmate. His plans all frustrated, he removed to the island of Guernsey, where, in 1831, wearied with the turmoil of life, he sank to his eternal rest, in the sixty-third year of his age. His faithful wife returned to the United States to procure indemnity from Congress for spoliations upon their property by the militia. But before the claim could be considered, she died in abject poverty, in an humble abode in the city of New York. In her last hours, she was surrounded by strangers, and the recipient of their charity; and her remains were escorted to their final resting-place, by some humble Irish females.

THE GREAT PRAIRIE WILDERNESS.

WHAT has been termed the Great Prairie Wilderness is the vast territory lying between the States of Louisiana, Arkansas, Missouri, Iowa, and the Upper Mississippi, on the east, and the Black Hills and the eastern range of the Rocky and the Cordillera Moun-

tains on the west. About a thousand miles of longitude and near two thousand miles of latitude, equaling the combined area of several of the powerful empires of Europe, and that, too, of an almost continuous plain. The sublime Prairie Wilderness!

The portion of this vast region, two hundred miles in width, along the coast of Texas and the frontier of Louisiana, Arkansas, Missouri, and that lying within the same distance of the Upper Mississippi in Iowa, possesses a rich, deep alluvial soil, capable of producing the most abundant crops of the grains, vegetables, etc., that grow in such latitudes. Nebraska and Kansas comprise a large part of this portion.

Another portion, lying west of the irregular western line of that just described, five hundred miles in width, extending from the mouth of St. Peters or Minnesota River to the Rio del Norte, is an almost unbroken plain destitute of trees, save here and there one scattered at intervals for many miles along the banks of the streams. The soil, except the intervals of some of the rivers, is composed of coarse sand and clay, so thin and hard that it is difficult for travelers to penetrate it with the stakes they carry with them wherewithal to fasten their animals or spread their tents. Nevertheless it is covered thickly with an extremely nutritious grass peculiar to this region of country, the blades of which are wiry and about two inches in height.

The remainder of the Great Wilderness, lying three hundred miles in width along the eastern base of the Black Hills and that part of the Rocky Mountains between the Platte and the Arkansas and the Cordilleras range east of the Rio del Norte, is the arid waste usually called the *Great American Desert*. Its soil is composed of dark gravel mixed with sand. Some small portions of it, on the banks of the streams, are covered with tall prairie and bunch grass, others with wild wormwood; but even these kinds of vegetation decrease and finally disappear as you approach the mountains. A scene of desolation scarcely equaled on the continent is this, when viewed in the dearth of midsummer from the bases of the hills. Above you rise in sublime confusion mass upon mass of shattered cliffs, through which are struggling the dark foliage of stunted shrub cedars, while below you spreads far and wide the burnt and arid desert, whose solemn silence is seldom broken by the tread of any other animal than the wolf or the starved and thirsty horse that bears the traveler across its wastes.

The principal streams that intersect the Great Prairie Wilderness are the Colorado, the Brasos, Trinity, Red, Arkansas, Great Platte, and the Missouri. The latter is in many respects a noble stream. In the month of April, May, and June it is navigable for steamboats to the Great Falls; but the scarcity of water during the remainder of the year, the scarcity of wood and coal along its banks, its rapid current, its winding course, its falling banks, the timber imbedded in its channel, and its constantly shifting sand-bars will ever prevent its being extensively navigated. Above the

mouth of the Little Missouri and in the tributaries there flowing into it, are said to be many charming and productive valleys separated from each other by secondary rocky ridges sparsely covered with evergreens; and high over all, far in the southwest, west, and northwest, tower in view the Rocky Mountains; whose inexhaustible magazines of snow and ice have for ages supplied these valleys with refreshing springs and those vast rivers with their tribute to the seas.

Lewis and Clarke in their way to Oregon, in 1805, made the passage at the Great Falls of the Missouri thirteen miles, in which distance the water descended three hundred and fifty-two feet, the greatest pitch being ninety-eight feet. They ascended to the extreme head of navigation, making from the mouth of the Missouri, from whence they started, three thousand and ninety-six miles—four hundred and twenty-nine of which lay among the sublime crags and cliffs of the Rocky Mountains.

The Great Platte, or Nebraska, has a course by its northern fork of about fifteen hundred miles, and by its southern somewhat more. During the summer and autumn it is too shallow to float even a canoe, and in winter is bound with ice. But it is of great value as the route of overland emigration to California and Oregon. Loaded wagons pass, without serious interruption, from the mouth of the Platte to navigable waters on the Columbia, in Oregon, and the Bay of San Francisco, in California. The Platte, therefore, when considered in relation to our intercourse with the habitable countries in the Western Ocean, assumes an unequalled importance among the streams of the Great Western Wilderness! But for it, it would be impossible for man or beast to travel those arid plains, destitute alike of wood, water, and grass, save what of each is found along its course. Upon the headwaters of the north fork, too, is the only way or opening in the Rocky Mountains at all practicable for a carriage road through them. That traversed by Lewis and Clarke is covered with perpetual snow; that near the passage of the south fork of the river is over high and nearly impassable precipices; and that farther south is and ever will be impassable for wheel carriages. But the Great Gap, or "the South Pass," nearly in a right line between the mouth of the Missouri and Fort Hall, on Clarke's River—the point near where the trails to California and Oregon diverge—seems designed by nature as the great gateway between the nations on the Atlantic and Pacific Seas.

The Red River has a course of about fifteen hundred miles, and derives its name from the color of its waters, produced by a rich, red earth or marl in its banks far up in the Prairie Wilderness. So abundant is this in the waters, that during the spring freshets it leaves a deposit on the overflowed lands of half an inch in thickness. Three hundred miles from its mouth commences what is called *the Raft*, a covering formed by drift wood, which conceals the whole river for forty miles and is so thickly covered with the sediment of

HEROISM OF A PIONEER WOMAN.

"In the meantime his heroic wife was busily engaged in defending the door against the efforts of the only remaining Indian, whom she so severely wounded, with the ax, that he was soon glad to retire."

the stream that vegetation, even trees of a considerable size are growing upon it. For seven hundred miles above the raft the river is one series of sandbars, among which in summer the water stands in ponds. As you approach the mountains it becomes contracted within narrow limits over a gravelly bottom and a swift, clear, and abundant stream.

The Trinity, the Brasos, and the Rio Colorado have each a course of about twelve hundred miles, rising in the plains and mountains on the north and northwest of Texas and running south and southeast into the Gulf of Mexico. The Rio Bravo del Norte bounds the Great Prairie Wilderness on the south and southwest. It is near two thousand miles long, but it is shallow and for most of its course scarcely navigable at times for even the canoe of the Indian.

The Arkansas, after the Missouri, is the most considerable river of the Great Prairie Wilderness. It takes its rise among the mountains, in places there passing through charming valleys and again through awful chasms. Its total length is two thousand one hundred and seventy-three miles. In freshets, large and heavy boats can pass from its mouth to where the river escapes from the mountains. In the dry season its water are strongly impregnated with salt and niter.

The trials of a journey across the Great Prairie Wilderness and thence over the mountains, through the western wilderness beyond, can never be detailed in words; to be understood they must be endured. The desolation of one kind and another which meets the eye everywhere; the sense of vastness associated with dearth and barrenness; one half the time on foot treading on the flinty gravel and the thorns of the prickly pear along the unbroken way; and the starvings and thirstings wilt the muscles, send preternatural activity into the nervous system, and through the whole animal and mental economy a feebleness and irritability altogether indescribable.

THE GREAT EARTHQUAKE OF 1811.

THIS memorable earthquake, after shaking the Mississippi Valley to its center, vibrated along the courses of the rivers and villages, and passing the Alleghany Mountains died away along the shores of the Atlantic Ocean.

The town of New Madrid, in the southern part of Missouri, on the west bank of the Mississippi, and the settlement of New Prairie some thirty miles below it, appeared to be near the center of the most violent shocks. The first occurred on the night of the 15th of December, and they were repeated at intervals for two or three months. A gentleman who resided at New Madrid a few years

later, derived from eye-witnesses a full account of these disturbances which he has recorded as follows :

From the accounts I infer that the shock of these earthquakes must have equaled, in their terrible heavings of the earth, anything of the kind that has been recorded. I do not believe that the public have ever yet had any idea of the violence of the concussions. We are accustomed to measure this by the buildings overturned, and the mortality that results. Here the country was thinly settled. The houses, fortunately, were frail and of logs, the most difficult to overturn that could be constructed. Yet as it was whole tracts were plunged into the beds of the Mississippi. The graveyard at New Madrid, with all its sleeping tenants, was precipitated into the bed of the stream. Most of the houses were thrown down. Large lakes, of many miles in extent, were made in an hour. Other lakes were drained. The whole country from the mouth of the Ohio in one direction, and to the St. Francis in another, including a front of three hundred miles, was convulsed to such a degree as to create lakes and islands, the number of which is not known. The trees split in the midst, lashed one with another, are still visible over great tracts of country, inclining in every direction and in every angle to the earth and the horizon. The people described the undulations of the earth as resembling waves, increasing in elevation as they advanced, and when they had attained a certain fearful height the earth would burst, and vast volumes of water, and sand, and pit coal would discharge as high as the tops of the trees. I have seen a hundred of these chasms which remained fearfully deep, although in a very tender, alluvial soil, after a lapse of seven years.

Whole districts were covered with white sand, so as to become uninhabitable. The water at first covered the whole country, particularly at the Little Prairie; and indeed it must have been a scene of horror, in these deep forests and in the gloom of the darkest night, and by wading in the water to the middle to fly from these concussions, which were occurring every few hours, with a noise equally terrible to beasts and birds as to men. The birds themselves lost all power and disposition to fly, and retreated to the bosoms of men, their fellow-sufferers in this general convulsion. A few persons sunk in these chasms and were providentially extricated. A number perished who sunk with their boats in the Mississippi. A bursting of the earth just below the village of New Madrid, arrested the mighty Mississippi in its course, and caused a reflux of its waves, by which in a little time, a great number of boats were swept by the ascending current into the mouth of the Bayou, carried out and left upon the dry earth, when the accumulating waters of the river had again cleared their current.

There were a number of severe shocks, but two series of concussions were particularly terrible; far more so than the rest. The shocks were clearly distinguishable into two classes: those in which the motion was horizontal. and those in which it was perpendicu-

lar. The latter were attended with explosions, and the terrible mixture of noises that preceded and accompanied the earthquakes in a louder degree, but were by no means so desolating and destructive as the other. Then the houses crumbled, the trees waved together, the ground sunk; while ever and anon vivid flashes of lightning gleaming through the troubled clouds of night, rendered the darkness doubly horrible. After the severest shocks, a dense black cloud of vapor overshadowed the land, through which no struggling sunbeam found its way to cheer the heart of man. The sulphurated gases that were discharged during the shocks tainted the air with their noxious effluvia, and so impregnated the water of the river for one hundred and fifty miles as to render it unfit for use.

In the interval of the earthquakes, there was one evening, and that a brilliant and cloudless one, in which the western sky was a continued glare of repeated peals of subterranean thunder, seeming to proceed, as the flashes did, from below the horizon. They remark that the night so conspicuous for subterranean thunder, was the same period in which the fatal earthquakes at Caracas in South America occurred, and they seem to suppose these flashes and that event part of the same scene.

One result from these terrific phenomena was very obvious. The people of this village had been noted for their profligacy and impiety. In the midst of those scenes of terror, all, Catholics and Protestants, praying and profane, became of one religion and partook of one feeling. Two hundred people speaking English, French, and Spanish, crowded together, their visages pale, the mothers embracing their children—as soon as the omen that preceded the earthquakes became visible, as soon as the air became a little obscured, as though a sudden mist arose from the east—all in their different languages and forms, but all deeply in earnest, betook themselves to the voice of prayer. The cattle, much terrified, crowded about the people seeking to demand protection or community of danger.

The general impulse when the shocks commenced, was to run; and yet, when they were at the severest point of their motion, the people were thrown on the ground at almost every step. A French gentleman told me that in escaping from his house, the largest in the village, he found he had left an infant behind, and he attempted to mount up the raised piazza to recover the child and was thrown down a dozen times in succession.

The venerable lady in whose dwelling we lodged, was extricated from the ruins of her house, having lost everything that appertained to her establishment, which could be broken or destroyed.

The people at the Little Prairie, who suffered most, had their settlement, which consisted of a hundred families, and which was located in a rich and very deep fertile bottom broken up. When I passed it and stopped to contemplate the traces of the catastrophe which remained after several years, the crevices where the

earth had burst were sufficiently manifest, and the whole region was covered with sand to the depth of two or three feet. The surface was red with oxydized pyrites of iron, and the sand-blows, as they were called, were abundantly mixed with this kind of earth, and with pieces of pit-coal. But two families remained of the whole settlement. The object seems to have been, in the first paroxysm of alarm, to escape to the hills. The depth of water that soon covered the surface, precluded escape.

The people, without exception, were unlettered backwoodsmen, of the class least addicted to reasoning. And yet, it is remarkable, how ingeniously and conclusively they reasoned, from apprehension sharpened by fear. They observed that the chasms in the earth were in the direction from southwest to northeast, and they were of an extent to swallow up not only men but houses "down deep into the pit." And these chasms occurred frequently within intervals of half a mile. They felled the tallest trees at right angles to the chasms, and stationed themselves upon the felled trees. Meantime their cattle and their harvests, both there and at New Madrid, principally perished.

The people no longer dared to dwell in houses. They passed that winter and the succeeding one in bark booths and camps, like those of the Indians, of so light a texture as not to expose the inhabitants to danger in case of their being thrown down. Such numbers of laden boats were wrecked above on the Mississippi, and the lading driven into the eddy at the mouth of the bayou, at the village which makes the harbor, that the people were amply supplied with provision of every kind. Flour, beef, pork, bacon, butter, cheese, apples, in short everything that is carried down the river, was in such abundance, as scarcely to be matters of sale. Many boats that came safely into the bayou, were disposed of by the affrighted owners for a trifle; for the shocks continued daily; and the owners deeming the whole country below to be sunk, were glad to return to the upper country as fast as possible. In effect, a great many islands were sunk, new ones raised, and the bed of the river very much changed in every respect.

After the earthquake had moderated in violence, the country exhibited a melancholy aspect of chasms, of sand covering the earth, of trees thrown down, or lying at an angle of forty-five degrees, or split in the middle. The Little Prairie settlement was broken up. The Great Prairie settlement, one of the most flourishing before on the west bank of the Mississippi, was much diminished. New Madrid dwindled to insignificance and decay; the people trembling in their miserable hovels at the distant and melancholy rumbling of the approaching shocks.

The general government passed an act allowing the inhabitants of the country to locate the same quantity of lands that they possessed here, in any part of the territory, where the lands were not yet covered by any claim. These claims passed into the hands of

speculators and were never of any substantial benefit to the possessors.

When I resided there, this district, formerly so level, rich, and beautiful, had the most melancholy of all aspects of decay—the tokens of former cultivation and habitancy, which were now mementos of desolation and desertion. Large and beautiful orchards left uninclosed, houses deserted, deep chasms in the earth, obvious at frequent intervals. Such was the face of the country, although the people had for years become so accustomed to frequent and small shocks, which did no essential injury, that the lands were gradually rising again in value, and New Madrid was slowly rebuilding with frail buildings adapted to the apprehensions of the people.

VOYAGE OF THE FIRST WESTERN STEAMBOAT.

THE first western steamboat was the New Orleans, a craft of four hundred tons burden, which was built at Pittsburgh in 1811. The origin of this boat and the history of her first voyage, is thus given by Latrobe, from which it will be seen that she narrowly escaped being overwhelmed in the great earthquakes that signalized the latter part of that year in the annals of the West.

The complete success attending the experiments in steam navigation made on the Hudson, and the adjoining waters previous to the year 1809, turned the attention of the principal projectors to the idea of its application on the western waters; and in the month of April of that year, Mr. Rosevelt of New York, pursuant to an agreement with Chancellor Livingston and Mr. Fulton, visited those rivers with the purpose of forming an opinion whether they admitted of steam navigation or not. At this time two boats, the North River and the Clermont were running on the Hudson.

Mr. Rosevelt surveyed the rivers from Pittsburgh to New Orleans, and as his report was favorable, it was decided to build a boat at the former town. This was done under his direction, and in the course of 1811, the first boat was launched upon the waters of the Ohio. It was called the "New Orleans," and was intended to ply between Natchez and New Orleans. In October, it left Pittsburgh on its experimental voyage. On this occasion no freight or passengers were taken, the object being merely to bring the boat to her station. Mr. Rosevelt, his young wife and family, Mr. Baker, the engineer, Andrew Jack, the pilot, and six hands with a few domestics, formed her whole burden. There were no woodyards at that time, and constant delays were unavoidable.

When as related, Mr. Rosevelt had gone down the river to reconnoiter, he had discovered two beds of coal, about one hundred and twenty miles below the rapids of Louisville, and now took

tools to work them, intending to load the vessel with coal, and to employ it as fuel, instead of constantly detaining the boat while wood was procuring from the banks.

Late at night, on the fourth day after quitting Pittsburgh, they arrived in safety at Louisville, having been but seventy hours descending upward of seven hundred miles. The novel appearance of the vessel, and the fearful rapidity with which it made its passage over the broad reaches of the river, excited a mixture of terror and surprise among many of the settlers on the banks, whom the rumor of such an invention had never reached; and it is related, that on the unexpected arrival of the vessel before Louisville, in the course of a fine, still moonlight night, the extraordinary sound which filled the air as the pent up steam was suffered to escape from the valves, on rounding to, produced a general alarm, and multitudes in the town rose from their beds to ascertain the cause.

I have heard the general impression among the good Kentuckians, was, that the comet had fallen into the Ohio; but this does not rest upon the same foundation as the other facts which I lay before you, and which I may at once say, I had directly from the lips of the parties themselves. The small depth of water in the rapids, prevented the boat from pursuing her voyage immediately; and during the consequent detention of three weeks in the upper part of the Ohio, several trips were successfully made between Louisville and Cincinnati. In fine, the waters rose, and in the course of the last week in November, the voyage was resumed, the depth of water barely admitting their passage.

When they arrived about five miles above the Yellow Banks they moored the boat opposite the first vein of coal, which was on the Indiana side and had been purchased in the interim of the State government. They found a large quantity already quarried to their hand and conveyed to the shore by depredators who had not found means to carry it off, and with this they commenced loading the boat. While thus employed, our voyagers were accosted in great alarm by the squatters of the neighborhood, who inquired if they had not heard strange noises on the river and in the woods in the course of the preceding day, and perceived the shores shake—insisting that they had repeatedly felt the earth tremble.

Hitherto, nothing extraordinary had been perceived. The following day they pursued their monotonous voyage in those vast solitudes. The weather was observed to be oppressively hot, the air misty, still, and dull; and though the sun was visible, like a glowing ball of copper, his rays hardly shed more than a mournful twilight on the surface of the water. Evening drew nigh, and with it some indications of what was passing around them became evident. And as they sat on deck, they ever and anon heard a rushing sound and violent splash, and saw large portions of the shore tearing away from the land and falling into the river. It was, as

my informant said, an awful day; so still that you could have heard a pin drop on the deck! They spoke little, for every one on board appeared thunderstruck. The comet had disappeared about ~~this~~ time, which circumstance was noticed with awe by the crew.

The second day after leaving the Yellow Banks, the sun was over the forests the same dim ball of fire, and the air was thick, dull, and oppressive as before. The portentous signs of this terrible natural convulsion continued and increased. The pilot, alarmed and confused, affirmed that he was lost, as he found the channel everywhere altered; and where he had hitherto known deep water there lay numberless trees with their root upward. The trees were seen waving and nodding on the bank without a wind, but the adventurers had no choice but to continue their route. Toward evening they found themselves at loss for a place of shelter. They had usually brought to under the shore, but everywhere they saw the high banks disappearing, overwhelming many a flatboat and raft, from which the owners had landed and escaped.

A large island in mid-channel, selected by the pilot as the better alternative, was sought for in vain, having disappeared entirely. Thus, in doubt and terror, they proceeded, hour after hour, until dark, when they found a small island and moored themselves at its foot. Here they lay, keeping watch on deck during the long winter's night, listening to the sound of the waters which roared and gurgled horribly around them, and hearing from time to time the rushing earth slide from the shore, and the commotion as the falling mass of earth and trees was swallowed up by the river. The lady of the party, a delicate female who had just been confined on board as they lay off Louisville, was frequently awakened from her restless slumber by the jar given to the furniture and loose articles in the cabin, as several times in the course of the night, the shock of the passing earth was communicated from the island to the bow of the vessel. It was a long night, but morning showed them that they were near the mouth of the Ohio. The shores and channel were now not recognizable, for everything seemed changed. About noon of that day they reached the small town of New Madrid, on the right bank of the Mississippi. Here they found the inhabitants in the greatest distress and consternation; part of the population had fled in terror to the higher grounds, others prayed to be taken on board, as the earth was opening in fissures on every side, and their houses hourly falling around them.

Proceeding from thence, they found the Mississippi unusually swollen, turbid, and full of trees, and after many days of great danger, though they felt and perceived no more of the earthquakes, they reached their destination at Natchez at the close of the first week in January, 1812, to the astonishment of all; the escape of the boat having been considered an impossibility.

The Orleans continued to run between New Orleans and Natchez, making her voyages to average seventeen days, until 1813 or '14, when she was wrecked near Baton Rouge by striking on a snag.

In the course of the few years succeeding the construction of the Orleans, several other boats were built and launched upon the western rivers. Yet such was their want of success that the public had no faith that steamboat navigation would succeed upon the western waters, until the trip of the Washington in the spring of 1817, when she went from Louisville to New Orleans and returned in forty-five days. This boat was of four hundred tons burden, and was built at Wheeling under the direction of her captain, H. M. Shreve. "Her boilers," says Judge Hall in his Notes, "were on the upper deck, and she was the first boat on that plan, since so generally in use."

SKETCH OF TECUMSEH, AND THE INDIAN WAR OF 1811.

THE celebrated Shawanee chief, Tecumseh, was born a few years before the war of the revolution, at the Indian village of Piqua, on Mad river, about six miles below the site of Springfield, Clarke County, Ohio. His tribe removed from Florida about the middle of the last century. His father, who was a chief, fell at the bloody battle of Point Pleasant, in 1774. From his youth he showed a passion for war; he early acquired an unbounded influence over his tribe from his bravery, his sense of justice, and his commanding eloquence. Like his great prototype, Pontiac, humanity was a prominent trait in his character. He not only was never known to ill-treat or murder a prisoner, but indignantly denounced those who did, employing all his authority and eloquence in behalf of the helpless. In 1798, Tecumseh removed with his followers to the vicinity of White River, Indiana, among the Delawares, where he remained for a number of years. In 1805, through the influence of Laulewasikaw, the brother of Tecumseh, a large number of Shawanees established themselves at Greenville. Very soon after, Laulewasikaw assumed the office of a *prophet*, and forthwith commenced that career of cunning and pretended sorcery, which enabled him to sway the Indian mind in a wonderful degree. Throughout the year 1806, the brothers remained at Greenville and were visited by many Indians from different tribes, not a few of whom became their followers. The Prophet dreamed many wonderful dreams, and claimed to have had many supernatural revelations made to him; the great eclipse of the sun which occurred in the summer of this year, a knowledge of which he had by some means attained, enabled him to carry conviction to the minds of many of his ignorant followers, that he was really the earthly agent of the Great Spirit. He boldly announced to the unbelievers, that on a certain day he would give them a proof of his supernatural powers by bringing darkness over the sun. When the day and hour of the eclipse arrived, and the earth even at mid-day was shrouded in the gloom of twilight, the Prophet, standing in the midst of his party, significantly pointed to the heavens, and cried

INDIAN LODGES AND LAKE OF THE WOODS.

"Two different kinds of Lodges are used by the Indians of the Northwest, viz.: the Conical Buffalo-Skin Lodge, and the Oblong Birch Bark Lodge."

out, "Did I not prophesy truly? Behold! darkness has shrouded the sun!" It may readily be supposed that this striking phenomenon, thus adroitly used, produced a strong impression on the Indians, and greatly increased their belief in the sacred character of their prophet.

In the spring of 1808, Tecumseh and the Prophet removed to a tract of land on the Tippecanoe, a tributary of the Wabash, where the latter continued his efforts to induce the Indians to forsake their vicious habits, while Tecumseh was visiting the neighboring tribes and quietly strengthening his own and the Prophet's influence over them. The events of the early part of the year 1810, were such as to leave little doubt of the hostile intentions of the brothers; the Prophet was apparently the most prominent actor, while Tecumseh was in reality the main spring of all the movements, backed, it is supposed, by the insidious influence of British agents, who supplied the Indian gratis with powder and ball, in anticipation perhaps of hostilities between the two countries, in which event a union of all the tribes against the Americans was desirable. Tecumseh had opposed the sale and cession of lands to the United States, and declared it to be his unalterable resolution to take a stand against the further intrusion of the whites upon the soil of his people. By various acts the feelings of Tecumseh became more and more evident; in August, he having visited Vincennes to see the governor, two successive councils were held, by which the real position of affairs was ascertained.

The undoubted purpose of the brothers now being known, Gov. Harrison proceeded to prepare for the contest he knew must ensue. In June of the year following (1811), he sent a message to the Shawanees, bidding them to beware of hostilities, to which Tecumseh gave a brief reply, promising to visit the governor. This visit he paid in July, accompanied by three hundred followers.

This council proving unsatisfactory, and Tecumseh soon after going south among the Creeks with the avowed purpose of extending his confederacy, the people of Indiana became greatly alarmed, and Governor Harrison therefore took measures to increase his regular force. His plan was to again warn the Indians to obey the treaty of Greenville, but at the same time prepare to break up the Prophet's establishment if necessary. In September, the Prophet sent assurances to the governor that his intentions were pacific. About the same time, he dispatched a message to the Delawares, who were friendly, to join him in a war against the United States, stating that he had taken up the tomahawk, and would not lay it down but with his life, unless their wrongs were redressed. The Delaware chiefs immediately visited the Prophet to dissuade him from commencing hostilities; and were grossly insulted. On the 6th of November, 1811, Governor Harrison, with about nine hundred and fifty effective troops, composed of two hundred and fifty of the 4th Regiment U. S. Infantry, one hundred and thirty volunteers, and a body of militia, being within a mile

and a half of the Prophet's town, was urged to make an immediate assault upon the village; but this he declined, as his instructions from the President were positive not to attack the Indians as long as there was a probability of their complying with the demands of government. The Indians, in the course of the day, endeavored to cut off his messengers and evinced other hostile symptoms, which determined Harrison to march at once upon the town, when he was met by three Indians, one of them a principal counselor of the Prophet, who stated that the Prophet's intentions were pacific. Accordingly a suspension of hostilities was agreed upon, and the terms of peace were to be settled the following morning by the governor and his chiefs. At night the army encamped about three quarters of a mile from the Prophet's town.

Battle of Tippecanoe.—The governor was perfectly convinced of the hostility of the Prophet. He believed that they intended to attack him by treachery, after having first lulled his suspicions by a pretended treaty, which had, indeed, been their original intention. No one anticipated an attack that night, yet every precaution was taken to resist one if made. All the guards that could be used in such a situation, and all such as were used by Wayne, were employed on this occasion. That is, camp guards, furnishing a chain of sentinels around the whole camp, at such a distance as to give notice of the approach of an enemy in time for the troops to take their position, and yet not far enough to prevent the sentinels from retreating to the main body if overpowered. The usual mode in civilized warfare of stationing picket-guards at a considerable distance in advance of an army leading to it, would be useless in Indian warfare, as they do not require roads to march upon, and such guards would always be cut off. Orders were given in the event of a night attack, for each corps to maintain its position at all hazards, until relief or further orders were given to it. The whole army was kept during the night, in the military position which is called, lying on their arms. The regular troops lay in their tents, with their accouterments on, and their arms by their sides. The militia had no tents, but slept with their clothes and pouches on, and their guns under them, to keep them dry. The order of the encampment was the order of battle for a night attack; and as every man slept opposite to his post in the line, there was nothing for the troops to do, in case of an assault, but to rise and take their position a few steps in the rear of the fires around which they had reposed. The guard of the night consisted of two captains' commands of forty-two men, and four non-commissioned officers each; and two subalterns' guards of twenty men and non-commissioned officers each—the whole amounting to about one hundred and thirty men, under the command of a field officer of the day. The night was dark and cloudy, and after midnight there was a drizzling rain.

At four o'clock in the morning of the 7th, Governor Harrison, according to practice, had risen preparatory to the calling up the

troops; and was engaged, while drawing on his boots by the fire, in conversation with General Wells, Colonel Owen, and Majors Taylor and Hurst. The orderly-drum had been roused for the purpose of giving the signal for the troops to turn out, when the attack of the Indians suddenly commenced upon the left flank of the camp. The whole army was instantly on its feet; the camp-fires were extinguished; the governor mounted his horse and proceeded to the point of attack. Several of the companies had taken their places in the line within forty seconds from the report of the first gun; and the whole of the troops were prepared for action in the course of two minutes; a fact as creditable to their own activity and bravery as to the skill and energy of their officers. The battle soon became general, and was maintained on both sides with signal and even desperate valor. The Indians advanced and retreated by the aid of a rattling noise, made with deer hoofs, and persevered in their treacherous attack with an apparent determination to conquer or die upon the spot. The battle raged with unabated fury and mutual slaughter until daylight, when a gallant and successful charge by the troops drove the enemy into the swamp, and put an end to the conflict.

Prior to the assault, the Prophet had given assurances to his followers, that in the coming contest, the Great Spirit would render the arms of the Americans unavailing; that their bullets would fall harmless at the feet of the Indians; that the latter should have light in abundance, while the former would be involved in thick darkness. Availing himself of the privilege conferred by his peculiar office, and, perhaps, unwilling in his own person to attest at once the rival powers of a sham prophesy and a real American bullet, he prudently took a position on an adjacent eminence; and, when the action began, he entered upon the performance of certain mystic rites, at the same time singing a war-song. In the course of the engagement, he was informed that his men were falling; he told them to fight on—it would soon be as he had predicted; and then, in louder and wilder strains, his inspiring battle-song was heard commingling with the sharp crack of the rifle and the shrill warhoop of his brave but deluded followers.

Throughout the action, the Indians manifested more boldness and perseverance than had perhaps ever been exhibited by them on any former occasion. This was owing, it is supposed, to the influence of the Prophet, who by the aid of his incantations, had inspired them with a belief that they would certainly overcome their enemy; the supposition, likewise, that they had taken the governor's army by surprise, doubtless contributed to the desperate character of their assaults. They were commanded by some daring chiefs, and although their spiritual leader was not actually in the battle, he did much to encourage his followers in their gallant attack. Some of the Indians who were in the action, subsequently informed the agent at Fort Wayne, that there were more than a thousand warriors in the battle, and that the number of

wounded was unusually great. In the precipitation of their retreat, they left thirty-eight on the field; some were buried during the engagement in their town, others no doubt died subsequently of their wounds. The whole number of their killed was probably not less than fifty.

Of the army under Governor Harrison, thirty-five were killed in the action, and twenty-five died subsequently of their wounds; the total number of killed and wounded was one hundred and eighty-eight. Among the former, were the lamented Colonel Abraham Owen and Major Joseph Hamilton Daviess, of Kentucky.

Both officers and men behaved with much coolness and bravery—qualities which, in an eminent degree, marked the conduct of Governor Harrison throughout the engagement. The peril to which he was subjected may be inferred from the fact that a ball passed through his stock, slightly bruising his neck; another struck his saddle, and glancing, hit his thigh; and a third wounded the horse on which he was riding.

Peace on the frontiers was one of the happy results of this severe and brilliant action. The tribes which had already joined in the confederacy were dismayed; and those which had remained neutral, now decided against it.

The victorious army, in the two succeeding days, burnt the Prophet's town and destroyed the crops. Tecumseh, shortly after returning from the south, was deeply mortified at the result of the battle. His brother, the Prophet, who lost by this battle his popularity and power among the Indians, was reproached by him in bitter terms, for having departed from his positive commands in then engaging in hostilities against the United States. Tecumseh was not, at that time, prepared for the accomplishment of his schemes against the Americans, but in the war that ensued the next year with Great Britain, the nature of his ulterior objects was well defined.

On the first commencement of the war of 1812, Tecumseh was in the field, prepared for the conflict. In July, there was an assemblage at Brownstown of those Indians who were inclined to neutrality. A deputation was sent to Malden to Tecumseh to attend this council. "No," said he indignantly, "I have taken sides with the king, my father, and I will suffer my bones to bleach upon this shore before I will recross that stream to join in any council of neutrality." He participated in the battle of Brownstown, and commanded the Indians in the action near Magnaga. In the last, he was wounded, and it is supposed that his bravery and good conduct led to his being shortly after appointed Brigadier-General in the service of the British King. In the siege of Fort Meigs, Tecumseh behaved with great bravery and humanity.

Immediately after the signal defeat of Proctor, at Fort Stephenson, he returned with the British troops to Malden by water, while Tecumseh, with his followers, passed over by land, round the head

of Lake Erie, and joined him at that point. Discouraged by the want of success, and having lost all confidence in General Proctor, Tecumseh seriously meditated a withdrawal from the contest, but was induced to remain.

When Perry's battle was fought, it was witnessed by the Indians from the distant shore. On the day succeeding the engagement, General Proctor said to Tecumseh, "My fleet has whipped the Americans, but the vessels being much injured, have gone into Put-in Bay to refit, and will be here in a few days." This deception, however, upon the Indians was not of long duration. The sagacious eye of Tecumseh soon perceived indications of a retreat from Malden, and he promptly inquired into the matter. General Proctor informed him that he was only going to send their valuable property up the Thames, where it would meet a reinforcement, and be safe. Tecumseh, however, was not to be deceived by this shallow device, and remonstrated most urgently against a retreat. He finally demanded, in the name of all the Indians under his command, to be heard by the general, and, on the 18th of September, delivered to him, as the representative of their great father, the king, the following speech:

Father, listen to your children! you have them now all before you. The war before this, our British father gave the hatchet to his red children, when our old chiefs were alive. They are now dead. In that war our father was thrown on his back by the Americans; and our father took them by the hand without our knowledge; and we are afraid that our father will do so again at this time. Summer before last, when I came forward with my red brethren and was ready to take up the hatchet in favor of our British father, we were told not to be in a hurry, that he had not yet determined to fight the Americans. Listen! when war was declared, our father stood up and gave us the tomahawk, and told us that he was then ready to strike the Americans; that he wanted our assistance, and that he would certainly get our lands back, which the Americans had taken from us. Listen! you told us at that time, to bring forward our families to this place, and we did so; and you promised to take care of them, and they should want for nothing, while the men would go and fight the enemy; that we need not trouble ourselves about the enemy's garrisons; that we knew nothing about them, and that our father would attend to that part of the business. You also told your red children that you would take good care of your garrison here, which made our hearts glad. Listen! when we were last at the Rapids, it is true, we gave you little assistance. It is hard to fight people who live like ground hogs. Father, listen! our fleet has gone out; we know they have fought; we have heard the great guns; but we know nothing of what has happened to our father (Commodore Barclay), with one arm.

Our ships have gone one way, and we are much astonished to see our father tying up everything and preparing to run away

the other, without letting his red children know what his intentions are. You always told us to remain here and take care of our lands; it made our hearts glad to hear that was your wish. Our great father, the king, is the head, and you represent him. You always told us you would never draw your foot off British ground; but now, father, we see that you are drawing back, and we are sorry to see our father doing so without seeing the enemy. We must compare our father's conduct to a fat dog, that carries his tail on its back, but when affrighted, drops it between its legs and runs off. Father, listen! the Americans have not yet defeated us by land; neither are we sure that they have done so by water; we, therefore, wish to remain here and fight our enemy should they make their appearance. If they defeat us, we will then retreat with our father. At the battle of the Rapids, last war, the Americans certainly defeated us; and when we returned to our father's fort at that place, the gates were shut against us. We were afraid that it would now be the case; but instead of that, we now see our British father preparing to march out of his garrison. Father, you have got the arms and ammunition which our great father sent his red children. If you have an idea of going away, give them to us, and you may go, and welcome, for us. Our lives are in the hands of the Great Spirit. We are determined to defend our lands, and if it be his will, we wish to leave our bones upon them.

Tecumseh entered the battle of the Thames with a strong conviction that he should not survive it. Further flight he deemed disgraceful, while the hope of victory in the impending action was feeble and distant. He, however, heroically resolved to achieve the latter or die in the effort. With this determination he took his stand among his followers, raised the war-cry, and boldly met the enemy. From the commencement of the attack on the Indian line, his voice was distinctly heard by his followers, animating them to deeds worthy of the race to which they belonged. When that well known voice was heard no longer above the din of arms the battle ceased. The British troops having already surrendered and the gallant leader of the Indians having fallen, they gave up the contest and fled. A short distance from where Tecumseh fell, the body of his friend and brother-in-law, Wasegoboah, was found. They had often fought side by side, and now, in front of their men, bravely battling the enemy, they side by side closed their mortal career.

Thus fell the Indian warrior Tecumseh, in the forty-fourth year of his age. He was of the Shawanee tribe, five feet ten inches high, and with more than the usual stoutness, possessed all the agility and perseverance of the Indian character. His carriage was dignified, his eye penetrating, his countenance, which even in death betrayed the indications of a lofty spirit, rather of a sterner cast. Had he not possessed a certain austerity of manners, he could never have controlled the wayward passions of those who

followed him to battle. He was of a silent habit, but when his eloquence became roused into action by the reiterated encroachments of the Americans, his strong intellect could supply him with a flow of oratory that enabled him, as he governed in the field, so to prescribe in the council.

KENTUCKY SPORTS.

WE have individuals in Kentucky that, even there, are considered wonderful adepts in the management of the rifle. Having resided some years in Kentucky, and having more than once been witness of rifle sport, I shall present the results of my observation, leaving the reader to judge how far rifle shooting is understood in that State.

Several individuals who conceive themselves adepts in the management of the rifle are often seen to meet for the purpose of displaying their skill; and betting a trifling sum, put up a target, in the center of which a common sized nail is hammered for about two-thirds its length. The marksman makes choice of what they consider a proper distance, and which may be forty paces. Each man cleans the interior of his tube, which is called *wiping* it, places a ball in the palm of his hand, pouring as much powder from his horn as will cover it. This quantity is supposed to be sufficient for any distance short of a hundred yards. A shot which comes very close to the nail is considered that of an indifferent marksman; the bending of the nail is of course somewhat better; but nothing less than hitting it right on the head is satisfactory. One out of the three shots generally hits the nail, and should the shooters amount to half-a-dozen, two nails are frequently needed before each can have a shot. Those who drive the nail have a further trial among themselves, and the two best shots out of these generally settle the affair, when all the sportsmen adjourn to some house and spend an hour or two in friendly intercourse, appointing before they part a day for another trial. This is technically termed "*driving the nail*."

Barking of squirrels is delightful sport, and in my opinion, requires a greater degree of accuracy than any other. I first witnessed this manner of procuring squirrels while near the town of Frankfort. The performer was the celebrated Daniel Boone. We walked out together and followed the rocky margins of the Kentucky River, until we reached a piece of flat land, thickly covered with black walnuts, oaks, and hickories. As the general *mast* was a good one that year, squirrels were seen gamboling on every tree around us. My companion, a stout, hale, athletic man, dressed in a homespun hunting-shirt, bare legged and moccasined, carried a long and heavy rifle, which, as he was loading it, he said had proved efficient in all of his former undertakings, and which he

hoped would not fail on this occasion, as he felt proud to show me his skill. The gun was wiped, the powder measured, the ball patched with six hundred thread linen, and a charge sent home with a hickory rod. We moved not a step from the place, for the squirrels were so thick that it was unnecessary to go after them. Boone pointed to one of these animals, which had observed us and was crouched on a tree about fifty paces distant, and bade me mark well where the ball should hit. He raised his piece gradually until the *bead* or sight of the barrel was brought to a line with the spot he intended to hit. The whiplike report resounded through the woods and along the hills in repeated echoes. Judge of my surprise, when I perceived that the ball had hit the piece of bark immediately underneath the squirrel and shivered it into splinters; the concussion produced by which had killed the animal and sent it whirling through the air, as if it had been blown up by the explosion of a powder magazine. Boone kept up his firing, and before many hours had elapsed, we had procured as many squirrels as we wished. Since that first interview with the veteran Boone, I have seen many other individuals perform the same feat.

The *snuffing of a candle* with a ball, I first had an opportunity of seeing near the banks of Green River, not far from a large pigeon roost, to which I had previously made a visit. I had heard many reports of guns during the early part of a dark night, and knowing them to be those of rifles, I went forward toward the spot to ascertain the cause. On reaching the place I was welcomed by a dozen tall, stout men, who told me they were exercising for the purpose of enabling them to shoot under night at the reflected light from the eyes of a deer or wolf by torchlight. A fire was blazing near, the smoke of which rose curling among the thick foliage of the trees. At a distance which rendered it scarcely distinguishable, stood a burning candle, but which in reality was only fifty yards from the spot on which we all stood. One man was within a few yards of it to watch the effect of the shots, as well as to light the candle should it chance to go out, or to replace it should the shot cut it across. Each marksman shot in his turn. Some never hit either the snuff or the candle, and were congratulated with a loud laugh; while others actually snuffed the candle without putting it out, and were recompensed for their dexterity with numerous hurrahs. One of them, who was particularly expert, was very fortunate, and snuffed the candle three times out of seven, while all the other shots either put out the candle or cut it immediately under the light.

Of the feats performed by the Kentuckians with the rifle, I might say more than might be expedient on the present occasion. By way of recreation they often cut off a piece of the bark of a tree, make a target of it, using a little powder wetted with water or saliva for the bull's-eye, and shoot into the mark all the balls they have about them, picking them out of the wood again.

THE WESTERN BOATMEN.

Just previous to the beginning of the present century, after the settlements had become more dense on the Monongahela and on the Ohio, a new class sprung up in the West whose life was unique. This was the class of *boatmen*. These were a hardy, fearless set of men, who always kept just in advance of civilization and luxury. Many of them at first, had been engaged in the border wars with the Indians, were bred from infancy amid dangers and experienced in all the practices and arts in the life of a woodsman.

The boatmen were courageous, athletic, persevering, and patient of privations. They traversed in their pirogues, barges, or keels, the longest rivers, penetrated the most remote wilderness upon their watery routes, and kept up a trade and intercourse between the most distant points. Accustomed to every species of exposure and privation, they despised ease and luxury. Clothed in the costume of the wilderness, and armed in western style, they were always ready to exchange the labors of the oar for offensive or defensive war. Exposed to the double force of the direct and reflected rays of the sun upon the water, their complexion was swarthy, and often but little fairer than the Indians. Often from an exposure of their bodies without shirts, their complexion from the head to the waist was the same.

Their toils, dangers, and exposures, and moving accidents of their long and perilous voyages, were measurably hidden from the inhabitants who contemplated the boats floating by their dwellings on beautiful spring mornings, when the verdant forest, the mild and delicious temperature of the air, the delightful azure sky, the fine bottom on the one hand, and the rolling bluff on the other, the broad smooth stream rolling calmly down the forest, and floating the boat gently forward, present delightful images to the beholders. At such times there was no visible danger, or call for labor. The boat took care of itself; and little would the beholders imagine, how different a scene might have been presented in half an hour. Meantime one of the hands scraped a violin and others danced. Greetings, or rude defiances, or trials of art, or proffers of love to the girls on shore, or saucy messages were scattered between them and the spectators along the banks. The boat glided on until it disappeared behind a point of wood. At that moment, perhaps, the bugle with which all boats were provided, struck up its notes in the distance, over the water. Those scenes and those notes, echoing from the bluffs of the beautiful Ohio, had a charm for the imagination which, although heard a thousand times, at all hours, and in all positions, presented to even the most unromantic spectator the image of a tempting and charming youthful existence, that almost inspired in his breast the wish that he too were a boatman.

No wonder that the young, who were reared in the then remote regions of the West, on the banks of the great stream, with that

restless curiosity which is fostered by solitude and silence, looked upon the severe and unremitting labor of agriculture as irksome and tasteless compared to such a life, and that they embraced every opportunity, either openly or covertly, to devote themselves to an employment which seemed full of romance to their youthful visions.

Steam had not exerted its magic influence on the western waters, and the rich cargoes which ascended the Mississippi in keelboats and barges were propelled by human labor for nearly two thousand miles, slowly advancing against the strong current of these rivers. The boatmen, with their bodies naked to the waist, spent the long and tedious days traversing the "running board," and pushing with their whole force against their strong setting-poles firmly fixed against their shoulder. Thus, with their heads suspended nearly to the track on the running-board, they propelled their freighted barge up the long and tedious route of the river. After a hard day's toil, at night they took their "fillee," or ration of whisky, swallowed their homely supper of meat half burned and bread half baked, and retiring to sleep, they stretched themselves upon the deck, without covering, under the open canopy of heaven, or probably enveloped in a blanket, until the steersman's horn called them to their morning "fillee" and their toil.

Hard and fatiguing was the life of a boatman; yet it was rare that any of them ever changed his vocation. There was a charm in the excesses, in the frolics, and in the fightings which they anticipated at the end of the voyage, which cheered them on. Of weariness none would complain; but rising from his hard bed by the first dawn of day, and reanimated by his morning draught, he was prepared to hear and obey the wonted order, "Stand to your poles and set off!" The boatmen were masters of the winding-horn and the fiddle, and as the boat moved off from her moorings, some, to cheer their labors, or to "scare off the devil and secure good luck," would wind the animating blast of the horn, which, mingling with the sweet music of the fiddle, and reverberating along the sounding shores, greeted the solitary dwellers on the banks with news from New Orleans.

Their athletic labors gave strength incredible to their muscles, which they were vain to exhibit, and fist-fighting was their pastime. He who could boast that he had never been whipped, was bound to fight whoever disputed his manhood. Keelboatmen and barge-men looked upon raftsmen and flatboatmen as their natural enemies, and a meeting was the prelude to a "battle-royal." They were great sticklers for "fair play," and whosoever was worsted in battle must abide the issue without assistance.

Their arrival in port was a general jubilee, where hundreds often met together for diversion and frolic. Their assemblages were often riotous and lawless to extremes, when the civil authorities were defied for days together. Had their numbers increased with the population of the West, they would have endangered the peace

of the country; but the first steamboat that ascended the Ohio sounded their death-knell, and they have been buried in the tide, never more to rise.

Mike Fink, usually called "the last of the boatmen," was a fair specimen of his race. Many curious anecdotes are related of him. He was born in Pittsburgh. In early youth, his desire to become a boatman was a ruling passion which soon had its gratification. He served on the Ohio and Mississippi Rivers as a boatman, until thrown out of employment by the general use of steamboats. When the Ohio was too low for navigation, he spent most of his time at shooting matches in the neighborhood of Pittsburgh, and soon became famous as the best shot in the country. On that account he was frequently called *bang all*, and hence, frequently excluded for participating in matches for beef; for which exclusion he claimed and obtained for his forbearance the *fifth quarter* of beef, as the hide and tallow are called. His usual practice was to sell his fifth quarter to the tavern keeper for whisky, with which he treated everybody present, partaking largely himself. He became fond of strong drink, and could partake of a gallon in twenty-four hours without the effect being perceivable.

Mike's weight was about one hundred and eighty pounds; height about five feet nine inches; countenance open; skin tanned by sun and rain; form broad and very muscular, and of Herculean strength and great activity. His language was of the half horse and half alligator dialect of the then race of boatmen. He was also a wit, and on that account he gained the admiration and excited the fears of all the fraternity; for he usually enforced his wit with a sound drubbing, if any one dared to *dissent* by neglecting or refusing to laugh at his jokes; for, as he used to say, he cracked his jokes on purpose to be laughed at in a good humored way, and that no man should make light of them. As a consequence, Mike had always around him a chosen band of laughing philosophers. An eye bugged up, or a dilapidated nose or ear, was sure to win Mike's sympathy and favor, for he made proclamation: "I'm a Salt River Roarer! I'm chuck full of fight, and I love the wimin," etc.; and he did, for he had a sweetheart in every port. Among his chosen worshipers, who would fight their death for him, as they termed it, were Carpenter and Talbot. Each was a match for the other in prowess, in fight, or skill in shooting, having each been under Mike's diligent training.

Mike, at one time, had a woman who passed for his wife; whether she was truly so, we do not know. But at any rate, the following anecdote is a rare instance of conjugal discipline.

Some time in the latter part of autumn, a few years after the close of the late war with Great Britain, several keelboats landed for the night near the mouth of the Muskingum, among which was that of Mike. After making all fast, Mike was observed, just under the bank, scraping into a heap the dried beech leaves, which had been blown there during the day, having just

fallen from the effects of the early autumn frosts. To all questions as to what he was doing he returned no answer, but continued at his work until he had piled them up as high as his head. He then separated them, making a sort of an oblong ring, in which he laid down, as if to ascertain whether it was a good bed or not. Getting up, he sauntered on board, hunted up his rifle, made great preparations about his priming, and then called in a very impressive manner upon his wife to follow him. Both proceeded up to the pile of leaves, poor "*Peg*" in a terrible flutter as she had discovered that Mike was in no very amiable humor.

"Get in there and lie down," was the command to Peg, topped off with one of Mike's very choicest oaths. "Now, *Mr. Fink*,"—she always mistered him when his blood was up—"what have I done? I don't know, I'm sure—"

"Get in there and lie down, or I'll shoot you," with another oath, and drawing up his rifle to his shoulder. Poor Peg obeyed, and crawled into the leaf pile, and Mike covered her up with the combustibles. He then took a flour barrel and split the staves into fine pieces, and lighted them at the fire on board the boat, all the time watching the leaf pile, and swearing he would shoot Peg if she moved. So soon as his splinters began to blaze he took them into his hand and deliberately set fire, in four different places, to the leaves that surrounded his wife. In an instant the whole mass was on fire, aided by a fresh wind which was blowing at the time, while Mike was quietly standing by enjoying the fun. Peg, through fear of Mike, stood it as long as she could; but it soon became too hot, and she made a run for the river, her hair and clothing all on fire. In a few seconds she reached the water and plunged in, rejoiced to know she had escaped both fire and rifle so well. "There," said Mike, "that'll larn you not to be winkin' at them fellers on t'other boat."

Mike first visited St. Louis as a keelboatman, in 1814 or '15. Among his shooting feats the following are related by eye witnesses. In ascending the Mississippi above the Ohio, he saw a sow with a couple of pigs, about one hundred feet distant on the river bank. He declared, in boatman phrase, he wanted a pig, and took up his rifle to shoot one, but was requested not to do so. He, however, laid his rifle to his face, and as the boat glided along under easy sail, he successively shot off the tail of each of them close to the rump, without doing them any other harm. Being, on one occasion, in his boat at the St. Louis landing, he saw a negro standing on the river bank, gazing in wonder at the show about him. Mike took up his rifle and shot off the poor fellow's heel. He fell badly wounded and crying *murder*. Mike was arrested and tried in the county court, and found guilty by a jury. His justification of the offense was, that the fellow's heel projected too far behind, preventing him from wearing a *genteel boot*, and he wished to correct the defect. His particular friend, Carpenter, was also a great shot. Carpenter and Mike used to fill a tin cup with

whisky, and place it by turns on each others' heads, and shoot at it with a rifle at the distance of seventy yards. It was always bored through without injury to the one on whose head it was placed. This feat is too well authenticated to admit of question. It was often performed, and they liked the feat the better because it showed their confidence in each other.

In 1822, Mike and his two friends, Carpenter and Talbot, engaged in St. Louis with Henry and Ashley to go up the Missouri with them in the threefold capacity of boatmen, trappers, and hunters. The first year, a company of about sixty ascended as high as the mouth of Yellow Stone River, where they built a fort for the purposes of trade and security. From this place, small detachments of men, ten or twelve in a company, were sent out to hunt and trap on the tributary streams of the Missouri and the Yellow Stone. When winter set in, Mike and his company returned to a place near the mouth of the Yellow Stone, and preferring to remain out of the fort, they dug a hole or cave in the bluff bank of the river, in which they resided during the winter, which proved a warm and commodious habitation, protecting them from the winds and the snows. Here Mike and his friend Carpenter had a deadly quarrel, supposed to have been caused by a rivalry in the good graces of a squaw. It was for awhile smothered by the interposition of friends.

On the return of spring, the party revisited the fort, where Mike and Carpenter, over a cup of whisky, revived the recollection of their past quarrel, but made a treaty of peace which was to be solemnized by their usual trial of shooting the cup of whisky off each others' heads. To determine who should have the first shot, Mike proposed that they should "sky (toss up) a copper," which was done and resulted in Mike's favor. Carpenter seemed to be aware of Mike's unforgiving treacherous disposition, but scorning to save his life by refusing to fulfill his contract, he prepared for death, and bequeathed his gun, shot-pouch, powder-horn, belt, pistols, and wages to Talbot. Without changing a feature, Carpenter filled the cup with whisky to the brim. Mike loaded, picked the flint, and leveled his rifle at the head of Carpenter, at the distance of sixty yards. After drawing the bead, he took down his rifle from his face, and smilingly said:

"Hold your noddle steady, Carpenter! Don't spill the whisky; I shall want some presently."

He again raised, cocked his piece, and in an instant Carpenter fell, and expired without a groan. Mike's ball had penetrated precisely through the center of his forehead. He coolly set down his rifle, and applying the muzzle to his mouth, blew the smoke out of the touch-hole, without saying a word, keeping his eye steadily on the fallen body of Carpenter. His first words were:

"Carpenter! have you spilt the whisky?" He was then told he had killed him. "It is all an accident!" rejoined Mike, "for I took as fair a *bead* on the black spot on the cup, as ever I took

on a squirrel's eye. How did it happen?" He then cursed the gun, the powder, the bullet, and finally, himself.

This catastrophe, in a country where the strong arm of the law could not reach, passed off for an accident. Talbot determined to revenge the death of his friend. No opportunity offered for some months after, until one day Mike, in a fit of gasconading, declared that he had purposely killed Carpenter, and was glad of it. Talbot instantly drew from his belt a pistol, bequeathed by Carpenter, and shot Mike through the heart; he fell, and expired without a word. Talbot also went unpunished, as nobody had authority or inclination to call him to account. In truth, he was as ferocious and dangerous as the grizzly bear of the prairies, and soon after perished in attempting to swim a river.

INDIAN WARFARE.

THIS is a subject which presents human nature in its most revolting features, as subject to a vindictive spirit of revenge, and a thirst of human blood, leading to an indiscriminate slaughter of all ranks, ages, and sexes, by the weapons of war, or by torture. The history of man is, for the most part, one continued detail of bloodshed, battles, and devastations. War has been, from the earliest periods of history, the almost constant employment of individuals, clans, tribes, and nations.

If the modern European laws of warfare have softened in some degree, the horrid features of national conflicts, by respecting the rights of private property, and extending humanity to the sick, wounded and prisoners; we ought to reflect that this amelioration is the effect of civilization only. The natural state of war knows no such mixture of mercy with cruelty. In his primitive state, man knows no object in his wars, but that of the extermination of his enemies, either by death or captivity. The wars of the Jews were exterminatory in their object. The destruction of a whole nation was often the result of a single campaign. Even the beasts themselves were sometimes included in the general massacre.

It is, to be sure, much to be regretted, that our people so often followed the cruel examples of the Indians, in the slaughter of prisoners, and sometimes women and children; yet let them receive a candid hearing at the bar of reason and justice, before they are condemned as barbarians equally with the Indians themselves. History scarcely presents an example of a civilized nation carrying on a war with barbarians, without adopting the mode of warfare of the barbarous nation. The ferocious Suwarrow, when at war with the Turks, was as much of a savage as the Turks themselves. His slaughters were as indiscriminate as theirs: but during his wars against the French, in Italy, he faithfully observed the laws of civilized warfare.

Our revolutionary war has a double aspect: on the one hand we carried on a war with the English, in which we observed the maxims of civilized warfare with the utmost strictness; but they associated with themselves, as auxiliaries, the murderous tomahawk and scalping-knife of the Indian nations around our defenseless frontiers. On them then, be the blame of all the horrid features of that war between civilized and savage men, in which the former were compelled by every principle of self-defense, to adopt the Indian mode of warfare, in all its revolting and destructive features.

Were those who were engaged in the war against the Indians less humane than those who carried on the war against their English allies? No! they were not. Both parties carried on the war on the same principle of reciprocity of advantages and disadvantages. For example, the English and Americans take each one thousand prisoners; they are exchanged; neither army is weakened by this arrangement. A sacrifice is indeed made to humanity, in the expense of taking care of the sick, wounded, and prisoners; but this expense is mutual. No disadvantages result from all the clemency of modern warfare, excepting an augmentation of the expenses of war. In this mode of warfare, those of the nation not in arms, are safe from death by the hands of soldiers. No civilized warrior dishonors his sword with the blood of helpless infancy, old age, or that of the fair sex. He aims his blows only at those whom he finds in arms against him. The Indian kills indiscriminately. His object is the total extermination of his enemies. Children are victims of his vengeance, because, if males, they may hereafter become warriors, or if females, they may become mothers. Even the fetal state is criminal in his view. It is not enough that the fetus should perish with the murdered mother, it is torn from her pregnant womb and elevated on a stick or pole, as a trophy of victory and an object of horror to the survivors of the slain.

How is a war of extermination, and accompanied with such acts of atrocious cruelty, to be met by those on whom it is inflicted? Must it be met by the lenient maxims of civilized warfare? Must the Indian captive be spared his life? What advantage would be gained by this course? The young white prisoners adopted into Indian families, often became complete Indians, but in how few instances did ever an Indian become civilized. Send a cartel for an exchange of prisoners? the Indians knew nothing of this measure of clemency in war; the bearer of the white flag for the purpose of effecting the exchange, would have excited his humanity at the forfeit of his life.

Should my countrymen be still charged with barbarism, in the prosecution of the Indian war, let him who harbors this unfavorable impression concerning them, portray in imagination the horrid scenes of slaughter which frequently met their view in the course of the Indian war. Let him, if he can bear the reflection, look at

helpless infancy, virgin beauty, and hoary age, dishonored by the ghastly wounds of the tomahawk and scalping-knife of the savage.

Let him hear the shrieks of the victims of the Indian torture by fire, and smell the surrounding air, rendered sickening by the effluvia of their burning flesh and blood. Let him hear the yells, and view the hellish features of the surrounding circle of savage warriors, rioting in all the luxuriance of vengeance, while applying the flaming torches to the parched limbs of the sufferers, and then suppose those murdered infants, matrons, virgins, and victims of torture, were his friends and relations, the wife, sister, child, or brother; what would be his feelings? After a short season of grief, he would say, "I will now think only of revenge."

Philosophy shudders at the destructive aspect of war in any shape; Christianity, by teaching the religion of the good Samaritan, altogether forbids it; but the original settlers of the western regions, like the greater part of the world, were neither philosophers nor saints. They were "men of like passions with others," and therefore adopted the Indian mode of warfare from necessity, and a motive of revenge; with the exception of burning their captives alive. Let the voice of nature, and the law of nations plead in favor of the veteran pioneers of the desert regions of the West.

In the conflicts of nations, as well as those of individuals, no advantages are to be conceded. If mercy may be associated with the carnage and devastations of war, that mercy must be reciprocal; but a war of utter extermination, must be met by a war of the same character; or by an overwhelming force which may put an end to it, without a sacrifice of the helpless and unoffending part of a hostile nation; such a force was not at the command of the first inhabitants of this country. The sequel of the Indian wars goes to show that in a war with savages, the choice lies between extermination and subjugation. Our government has wisely and humanely pursued the latter course.

INCIDENTS OF THE WAR OF 1812, IN THE WEST.

On the 18th of June, 1812, the United States declared war against Great Britain. Sometime previous, William Hull, Governor of the Michigan Territory, in an official communication to the General Government, stated that Detroit was the key to the upper region of the northwestern lakes, and to a vast extent of back country; and that this post might command a wide tract of territory, and serve to keep the northern Indians in check. He therefore suggested that a naval force should be sent forward immediately on Lake Erie, sufficient to command the lakes, and to co-operate with the post at Detroit. In case this project should be defeated, Governor Hull proposed that in case of war, Canada should be

invaded by a powerful army sent over from Niagara, which, co-operating with the force at Detroit, might subjugate the British provinces. If this was not done, he declared that the American posts on the lakes—Detroit, Michilimackinac, and Chicago—must fall into the hands of the enemy.

Owing to this suggestion, doubtless, government projected a campaign for the conquest of Canada. The object appears to have been to march to Detroit and Niagara at the same time, on the supposition that the armies concentrated at these posts, would from thence move forward to Montreal, uniting on their route a third army from Plattsburg. For this purpose, even before the declaration of war, the army destined for Detroit had collected at Dayton to the number of about two thousand; all drafted men and volunteers from Ohio, except the 4th U. S. Regiment, under Col. Miller, comprising about three hundred men. Governor Hull, who had command, having been ordered to Detroit, the army left Dayton the 1st of June, and after cutting their way through the wilderness, and enduring much hardship, arrived at the Maumee on the 30th.

Owing to the gross neglect of the government, General Hull had not, up to this time, received intelligence of the declaration of war, although he had advices from the Secretary of War, dated on the 18th, the very day on which it was declared. He therefore had no hesitation in sending a vessel from the Maumee to Detroit, in which were placed his sick, most of his goods, and even his instructions and army roll. The British at Malden had previously obtained the information. On the approach of the vessel to that point she was captured, and from British lips the intelligence of the war first broke upon the astonished crew.

Hull's Invasion.—Having arrived at Detroit on the 5th, Gen. Hull, on the 12th, crossed the river to Sandwich, and established his forces there, with a view to the taking of Malden, then the key to the Canadian provinces. There he issued a spirited proclamation from the pen of Lewis Cass, which had a powerful influence in keeping neutral the Indians and Canadians, and in inducing many of the latter to join the Americans. Some of the officers advised Hull to immediately storm Malden, which was twelve miles below his encampment, then but weakly garrisoned; but countenanced by a council of war, he judged it expedient to wait for his heavy artillery, which was preparing at Detroit. In the meantime, Col. Cass and Col. Miller, by an attack upon the advanced parties of the enemy, showed the power and willingness of the men to push their conquests, if the chance were given. When the moment arrived for the assault, the General, upon learning that a proposed attack on the Niagara frontier had not been made, and that troops of the enemy from that quarter were moving westward, suddenly abandoned the enterprise, and with most of his men, on the 7th of August, returned to Detroit, much to the

disappointment of the whole army, who had now lost all confidence in his capacity.

Battle of Monguagon.—Colonel Proctor arrived at Malden on the 29th of July, and commenced a series of operations to cut off the supplies of Hull from Ohio, which would completely neutralize all active operations on his part. By his measures, he stopped the stores on their way to Detroit at the river Raisin, thirty-six miles south, and next defeated Major Van Horne, who had been sent by Hull to escort them. Upon this intelligence, Hull sent three hundred regulars and two hundred militia under Colonel Miller, to open the communication. The enemy, anticipating a renewal of the attempt, had been reinforced to the number of seven hundred and fifty men. They threw up a breastwork about four miles from Brownstown, at a place called *Monguagon*, behind which the greater part of the Indians, under Tecumseh, lay concealed; the whole commanded by Major Muir. On the 9th, while on its march the detachment drew near the ambuscade, when suddenly the attack was commenced on the advance guard. Colonel Miller, with the utmost celerity and coolness, drew up his men, opened a brisk fire, and then charged. The British regulars gave way; but the Indians under Tecumseh betaking themselves to the woods on each side, kept their ground with desperate obstinacy. The regulars again rallied and returned to the combat. At length the enemy were compelled to yield, retiring slowly before the bayonet to Brownstown, when it is probable that the whole force would have been taken, had not boats been provided for their embarkation. The battle lasted about two hours, during which the enemy lost over one hundred in killed and wounded; the loss of the Americans was much less. Among the wounded of the enemy were both Major Muir and Tecumseh.

Surrender of Detroit.—On the 13th, General Brock, a brave, energetic officer, reached Malden with reinforcements. Aware of the character of Hull, he prepared for the conquest of Detroit. On the 14th, he planted batteries at Sandwich, opposite the fortress of Detroit, and demanded its surrender, stating that he should otherwise be unable to restrain the fury of the savages. This was answered by a spirited refusal, and a declaration that the fort and town would be defended to the last extremity. The firing immediately commenced, and continued without much effect until the next day. The alarm and consternation of General Hull had now become extreme. On the 12th, the field officers suspecting the general intended a surrender of the fort, had determined on his arrest. This was probably prevented in consequence of Colonels M'Arthur and Cass, two very active and spirited officers being detached on the 13th with four hundred men, on a third expedition to the river Raisin. Early on the morning of the 16th, the British landed at Springwell, three miles below the town, without opposition, and marched up in solid column toward the fort along the river bank. The troops were strongly posted, and cannon loaded

with grape, stood on a commanding eminence ready to sweep the advancing columns. The troops anticipating a brilliant victory, waited in eager expectation the advance of the British. What was their disappointment and mortification at the very moment when it was thought the British were advancing to certain destruction, orders were given for them to retire within the fort, and for the artillery not to fire. Then the men were ordered to stack their arms, and to the astonishment of all, a white flag was suspended from the walls, and Hull, panic stricken, surrendered the fortress without even stipulating the terms. The surrender included, beside the troops at Detroit, the detachments under Cass and M'Arthur, and the party with the supplies under Captain Brush at the river Rasin. No provision was made for the unfortunate Canadians who had joined General Hull, and several of them were executed as traitors.

An event so disgraceful excited universal indignation throughout the country. When M'Arthur's sword was demanded, he indignantly broke it, tore the epaulettes from his shoulders, and threw himself upon the ground. When Gen. Hull was exchanged, he was tried by a court-martial, found guilty of cowardice, and sentenced to be shot; but was pardoned by the Executive in consequence of his revolutionary services and his advanced age.

By this time two other forts on the western lakes had fallen into the possession of the enemy—Mackinaw and Fort Dearborn. The first was garrisoned by fifty-seven men under Lieutenant Hanks. On the 17th of July, over one thousand British and Indians appeared before the fortress and demanded its surrender; this was the first intimation the commander had of the declaration of war. Unable to withstand so large a force, he surrendered to avoid a threatened Indian massacre.

The garrison of Fort Dearborn, at Chicago, was less fortunate. Gen. Hull, while in Canada, dispatched Winnemeg, a friendly Indian, to Captain Heald, the commander, with information of the loss of Mackinaw, and directed him to distribute his stores among the Indians, and return to Fort Wayne. He had the amplest means of defense, but the order, received on the 9th of August, left nothing to his discretion. The Pottawatomies, however, had obtained intelligence of the war from a runner sent by Tecumseh, and collected, to the number of several hundred, around the fort. Capt. Heald, notwithstanding the symptoms of hostility among the Indians, proceeded to obey his orders. He distributed all the stores among the Indians, excepting what they most wanted—the liquors and ammunition, which were secretly thrown into the water. This they learned, and this it was which led to the catastrophe which ensued. On the 14th, Capt. Wells arrived with fifteen friendly Miamies from Fort Wayne. This intrepid warrior, who had been bred among the Indians, hearing that his friends at Chicago were in danger, had hastened thither to avert the fate which he knew must ensue to the little garrison, if they evacuated

the fort. But he was too late, the ammunition and provisions both being gone, there was no alternative. He fell in the massacre that ensued, and his heart was taken out and eaten by the savages. The next day (the 15th), all being ready, the garrison left the fort with martial music and in military array. Before they had proceeded two miles, they were attacked by the Indians, and two-thirds of them (from fifty to sixty) massacred on the spot. The particulars of this massacre we pause to detail.

Captain Wells, at the head of the Miamies, led the van, his face blackened after the manner of the Indians. The garrison, with loaded arms followed, and the wagons with the baggage, the women and children, the sick, and the lame, closed the rear. The Pottawatomies, about five hundred in number, who had promised to escort them in safety to Fort Wayne, leaving a little space, afterward followed. The party in advance took the beach road. They had no sooner arrived at the sand-hills which separate the prairie from the beach, about a mile and a half from the fort, when the Pottawatomies, instead of continuing in the rear of the Americans, left the beach and took to the prairie. The sand-hills, of course, intervened and presented a barrier between the Pottawatomies and the American and Miami line of march. This divergence had scarcely been effected, when Captain Wells, who, with the Miamies, was considerably in advance, rode back and exclaimed: "They are about to attack us; form instantly and charge upon them." The word had scarcely been uttered before a volley of musketry, from behind the sand-hills, was poured in upon them. The troops were brought immediately into a line, and charged up the bank. One man, a veteran of seventy, fell as they ascended. The battle at once became general. The Miamies fled in the outset.

The American troops behaved gallantly. Though few in number, they sold their lives as dearly as possible. While the battle was raging, the surgeon, Doctor Voorhes, who was badly wounded, and whose horse had been shot from under him, approaching Mrs. Helm, the wife of Lieutenant Helm, observed: "Do you think," said he, "they will take our lives? I am badly wounded, but I think not mortally. Perhaps we can purchase safety by offering a large reward. Do you think," continued he, "there is any chance?" "Doctor Voorhes," replied Mrs. Helm, "let us not waste the few moments, which yet remain, in idle or ill-founded hopes. Our fate is inevitable. We must soon appear at the bar of God. Let us make such preparations as are yet in our power." "Oh!" said he, "I cannot die; I am unfit to die! If I had a short time to prepare! Death! Oh, how awful!"

At this moment, Ensign Ronan was fighting at a little distance with a tall and portly Indian; the former, mortally wounded, was nearly down and struggling desperately upon one knee. Mrs. Helm, pointing her finger and directing the attention of Doctor Voorhes thither, observed: "Look," said she, "at that young man, he dies

like a soldier." "Yes," said Doctor Voorhes, "but he has no terrors of the future; he is an unbeliever." A young savage immediately raised his tomahawk to strike Mrs. Helm. She sprang instantly aside, and the blow intended for her head fell upon her shoulder. She thereupon seized him around his neck, and while exerting all her efforts to get possession of his scalping-knife, was seized by another Indian and dragged forcibly from his grasp.

The latter bore her, struggling and resisting, toward the lake. Notwithstanding, however, the rapidity with which she was hurried along, she recognized, as she passed, the remains of the unfortunate surgeon stretched lifeless on the prairie. She was plunged immediately into the water, and held there, notwithstanding her resistance with a forcible hand. She shortly, however, perceived that the intention of her captor was not to drown her, as he held her in a position to keep her head above the water. Thus re-assured, she looked at him attentively, and, in spite of his disguise, recognized the "white man's friend." It was Black Partridge.

The troops having fought with desperation until two-thirds of their number were slain, the remainder, twenty-seven in all, borne down by an overwhelming force, and exhausted by efforts hitherto unequalled, at length surrendered. They stipulated, however, for their own safety and for the safety of their remaining women and children. The wounded prisoners, however, in the hurry of the moment, were unfortunately omitted, or rather not particularly mentioned, and were, therefore, regarded by the Indians as having been excluded.

One of the soldiers' wives, having frequently been told that prisoners taken by the Indians were subjected to tortures worse than death, had, from the first, expressed a resolution never to be taken; and when a party of savages approached to make her their prisoner, she fought with desperation, and though assured of kind treatment and protection, refused to surrender, and was literally cut to pieces, and her mangled remains left on the field. After the surrender, one of the baggage wagons, containing twelve children, was assailed by a single savage, and the whole were massacred. All, without distinction of age or sex, fell at once beneath his murderous tomahawk.

During the massacre, one Indian, with the fury of a demon in his countenance, advanced to Mrs. Heald, with his tomahawk drawn. She had been accustomed to danger, and knowing the temper of the Indians, with great presence of mind looked him in the face, and smiling, said: "Truly, you will not kill a squaw?" His arm fell nerveless. The conciliating smile of an innocent female, appealing to the magnanimity of a warrior, reached the heart of the savage, and subdued the barbarity of his soul.

Captain Heald and lady, by the aid and influence of To-pa-na-bee and Kee-po-tah, were put into a bark canoe, and paddled by a chief of the Pottawatomies and his wife, to Mackinaw, three hundred miles distant, along the eastern coast of Lake Michigan, and

delivered to the British commander. They were kindly received and sent afterward as prisoners to Detroit, where they were finally exchanged.

Lieutenant Helm was wounded in the action, and taken prisoner; he was afterward taken by some friendly Indians to the Au Sable, and from thence to St. Louis, and liberated from captivity through the intervention of Mr. Thomas Forsyth, an Indian trader. Mrs. Helm was wounded slightly in the ankle, had her horse shot from under her, and after passing through several agonizing scenes, was taken to Detroit. The soldiers, with their wives and children, were dispersed among the Pottawatomies, on the Illinois, the Wabash, and Rock Rivers, and some were taken to Milwaukee. In the following spring they were principally collected at Detroit, and ransomed. A part of them, however, remained in captivity another year, and during that period, experienced more kindness than they or their friends had anticipated.

Thus, within two months from the declaration of war, the whole northwest, excepting Forts Harrison and Wayne, in the Indiana Territory, was in possession of the enemy. Much alarm and astonishment prevailed throughout the West. The great mass of the Indians in the West, ever ready to join the successful party, were now flocking to the British. By the spirited exertions of the Governors of Ohio, Kentucky, Indiana, and Illinois, three thousand volunteers were assembled and placed under the command of Gen. Harrison, for the purpose of subduing the Indians, and regaining what was lost at Detroit.

Attack on Fort Harrison.—Fort Harrison, situated on the Wabash, sixty miles above Vincennes, was attacked on the night of the 4th of September, by several hundred Indians from the Prophet's town. In the evening previous, thirty or forty Indians appeared before the fort with a flag, under the pretense of obtaining provisions. The commander, Captain Zachary Taylor (since President), made preparations for the expected attack. In the night, about eleven o'clock, the Indians commenced the attack by firing on the sentinel. Almost immediately, the lower block-house was discovered to have been set on fire. As this building joined the barracks which made part of the fortifications, most of the men panic stricken, gave themselves up for lost. In the meantime, the yells of several hundred savages, the cries of the women and children, and the despondency of the soldiers, rendered it a scene of confusion. But the presence of mind of the captain, did not forsake him. By the most strenuous exertions on his part the fire was prevented from spreading, and before day the men had erected a temporary breast-work seven feet high, within the spot where the building was consumed. The Indians kept up the attack until morning, when finding their efforts ineffectual, they retired. At this time, there were not more than twenty men in the garrison fit for duty.

Hopkins' Expeditions.—Shortly after, General Hopkins with a large force, engaged in two different expeditions, against the Indians on the headwaters of the Wabash and the Illinois. The first was in October. With four thousand mounted volunteers from Kentucky, Illinois and Indiana, he left Vincennes early in the month, relieved Fort Harrison on the 10th, and from thence, marched for the Kickapoo villages, and the Peoria towns—the first one hundred, and the last one hundred and sixty miles distant. But his men mutinizing, he was obliged to return before reaching the hostile towns. On the 11th of November, he marched from Fort Harrison, on his second expedition, with a detachment of regular troops and volunteers. On the 20th, he arrived at the Prophet's town, at which place and vicinity he destroyed three hundred wigwams, and large quantities of Indian corn. Several other expeditions were successfully accomplished, against the Indians on the Wabash, the Illinois and their tributaries, by which the security of that frontier was effected.

Siege of Fort Wayne.—This fort was erected by Wayne, in 1794, on the Maumee, at the junction of the St. Joseph's and St. Mary's, near the northeastern corner of Indiana. Immediately after the massacre at Chicago, it was closely besieged by several hundred Miami and Pottowatomie Indians. The garrison numbered only some sixty or seventy effective men. The siege continued until near the middle of September, when General Harrison marched to its relief with twenty-five hundred men, upon which the Indians fled.

The next object of General Harrison, was to open and secure a communication along the Miami River, between the settled part of Ohio and Lake Erie, establishing a strong post at the Maumee Rapids. On the 20th of September, General Winchester commenced his march along the Maumee to Fort Defiance. At Defiance, General Harrison left the command to Winchester, and proceeded to Franklinton, in the center of the State, to organize and bring on reinforcements.

From Franklinton, Harrison in November, sent Colonel Campbell with six hundred men against the Indian towns on the Missinneway, a branch of the Wabash. They destroyed several of their towns, and defeated the Indians in a hard fought battle, but the severity of the weather, compelled them to return.

Battle of the River Raisin.—While Winchester was strengthening the post at the Maumee Rapids, he received a pressing call for protection against the British and Indians at Malden, from the inhabitants of Frenchtown, a village on the River Raisin, inhabited by people of French extraction. He sent forward Colonel Lewis with three hundred men; but the enemy had got there before him. The day after his arrival, on the 18th of December, he attacked and drove them from a fortified position, and on the 20th, the whole force was augmented, by the arrival of Winchester, to seven hundred and fifty men, mostly Kentucky volunteers.

This movement was without the knowledge of the commander-in-chief, General Harrison, and was exceedingly rash. The troops were far from succor, and within twenty miles of Malden, where was a much superior force. At daybreak, on the 22d, the American encampment was attacked by sixteen hundred British and Indians from Malden, under Proctor. They defended themselves with desperate resolution for four hours, but at last, overwhelmed by numbers, surrendered, under a promise of being protected from the Indians. This promise was broken: a large number of prisoners, mostly those who were wounded, were atrociously murdered by the Indians.

One-third were killed in the battle and massacre that followed, and but thirty-three escaped. The merciless savages fired the town, dragged the wounded from the houses, killed and scalped them in the streets, and left their mangled bodies in the highway.

Siege of Fort Meigs.—On the 1st of February, Harrison, with seventeen hundred men, advanced to the Maumee Rapids, and commenced the building of Fort Meigs, about ten miles south of the site of Toledo, on the east bank of the river, and opposite Wayne's battle-ground of 1794. On the 28th, the British forces commenced the investment of Harrison's camp, and in three days after, had finished their batteries. In the meanwhile, the Americans had thrown up a wall of earth twelve feet high, behind which they were secure from the balls of the enemy. On the 6th, Gen. Green Clay came down the Maumee in flat-boats, with a reinforcement of twelve hundred men, and in accordance with orders from Harrison, detached eight hundred Kentucky volunteers, under Colonel Dudley, to attack the batteries on the west bank of the river, while he, with the remainder of his forces, landed on the opposite shore, and with some delay and loss, fought his way into camp. Dudley succeeded in driving the enemy from the batteries and in spiking the cannon, but his men disobeying the peremptory orders of their colonel to return to the boats and cross over to the fort, with true Kentucky impetuosity, commenced a pursuit of the Indians until sufficient time had elapsed for the main body of the enemy to march from their camp, which was two miles down the river, up to their position, and overwhelm them by their superiority. The result was, that only one hundred and fifty escaped. The remainder were either killed or surrendered at discretion, when the savages commenced an indiscriminate massacre, upon which Tecumseh, more merciful than Proctor, interposing his authority, stopped the slaughter. Colonel Dudley was among the slain.

In the course of the day, two sorties were made from Fort Meigs; one to cover the landing of the reinforcement, and the other against some British batteries that had been erected on the same side of the river, both of which were eminently successful. Proctor seeing no prospect of taking the fort, raised the siege on the 9th, and returned to Malden. The Americans lost in the

sortie of the 5th, and during the siege, eighty-one killed and one hundred and eighty-nine wounded.

On the 20th of July, the enemy, to the number of five thousand, again appeared before Fort Meigs, which had been left under the command of General Green Clay. They remained but a few days, and then proceeded in their vessels down the lake, and a few days after, appeared before Fort Stephenson.

Assault on Fort Stephenson.—This post had been established by General Harrison on Sandusky River, eighteen miles from its mouth, and forty east of Fort Meigs. It was garrisoned by one hundred and fifty men, under Major George Croghan, a young Kentuckian, just past twenty-one years of age. This fort being indefensible against heavy cannon, which it was supposed would be brought against it by Proctor, it was judged best by Harrison and his officers in council that it should be abandoned. But the enemy appeared before the garrison on the 31st of July, before the order could be executed; they numbered thirty-three hundred strong, including the Indians, and brought with them six pieces of artillery, which luckily were of light caliber. To Proctor's demand for its surrender, he was informed that he could only gain access over the corpses of its defenders. The enemy soon opening their fire upon them, gave Croghan reason to judge that they intended to storm the northwest angle of the fort. In the darkness of night he placed his only piece of artillery, a six pounder, at that point, and loaded it to the muzzle with slugs. On the evening of the 2d, three hundred British veterans marched up to carry the works by storm, and when within thirty feet of the masked battery it opened upon them. The effect was decisive, twenty-seven of their number were slain, the assailants recoiled, and having the fear of Harrison before them, who was at Fort Seneca, some ten miles south, with a considerable force, they hastily retreated the same night, leaving behind them their artillery and stores.

Perry's Victory.—The grand object of the campaign was to attack Malden and reconquer Michigan from the enemy; but this could not be effectually done so long as the fleet of the enemy held possession of Lake Erie. To further the desired object, a number of vessels had been building at Erie, on the southeast shore of the lake, and were finished early in August. They consisted of two twenty gun vessels, and seven smaller vessels, carrying from one to three each—the whole fleet numbering fifty-four guns. On the 10th of September, Perry fell in with, and gave battle to the British fleet near the western end of the lake, under Commodore Barclay, consisting of six vessels, carrying in all sixty-four guns. The number of guns in both fleets, in some cases, is surpassed by those of a single battle-ship of the line. The engagement between these little fleets was desperate, and lasted three hours. Never was victory more complete; every British ship struck her colors, and the Americans took more prisoners than they themselves numbered men.

General Harrison at this time, lay with the main body of the Americans in the vicinity of Sandusky Bay and Fort Meigs; the British and their Indian allies, under Proctor and Tecumseh, were at Malden, ready in case of a successful issue, to renew their ravages on the American borders.

Battle of the Thames.—Harrison's army had received a reinforcement of three thousand Kentucky volunteers under Governor Shelby. On the 27th of September the main body of the army sailed for Detroit River, intending to enter Canada by the valley of the Thames. Two days after, Harrison was at Sandwich, and M'Arthur took possession of Detroit. Proctor retreated up the Thames, was pursued, and came up with on the 5th of October, by Harrison's army; the Americans numbering something over three thousand, and their enemy about two thousand. The latter were badly posted in order of battle. Their infantry were formed in two lines, extending from the river to a small dividing swamp; the Indians extended from the latter to a larger swamp. The Kentucky mounted men, under Colonel Richard M. Johnson, divided into two parts. The one under the colonel in person, charged the Indians; the other under his brother James, charged the infantry. The latter received the enemy's fire, broke through their ranks, and created such a panic, that they at once surrendered. Upon the left the contest with the Indians was more severe; but there the impetuosity of the Kentuckians overcame the enemy, Tecumseh, their leader, being among the slain. The battle was over in half an hour, with a loss to both armies of less than fifty killed. Proctor fled at the beginning of the action.

In January 1814, the enemy again took a position near the battle field of the Thames. Captain Holmes while advancing to meet them, learned that a superior force was approaching. Having posted himself on a hill, and thrown up intrenchments, he was vigorously attacked, but repulsed the enemy with considerable loss. In the June following, Col. Croghan attempted to take the island of Mackinaw, but his force being insufficient, he was repelled with the loss of twelve men, among whom was Major Holmes. A fort having been established at Prairie du Chien, early in the season, it was invested by twelve hundred British and Indians from Mackinaw, and the officer in command, Lieutenant Perkins, having lost sixty men, capitulated.

The last movement of consequence in the northwest during the war, was the expedition of General M'Arthur. He left Detroit on the 26th of October with seven hundred cavalry, intending to move to the relief of General Brown, who was besieged by the enemy at Fort Erie, on the Niagara River, opposite Buffalo. When he had proceeded about two hundred and fifty miles, he ascertained that the enemy were too strong in front, and he changed his course, defeated a body of opposing militia, destroyed several mills, and returned to Detroit, without the loss of a man, although pursued by about twelve hundred regular troops.

Events of the war in the Southwest.—Soon after the commencement of hostilities, the United States were involved in a war with the Southern Indians, who inhabited the Mississippi Territory, comprising the country south of Tennessee, between Georgia and the Mississippi River. They consisted of the Creek, Chickasaw, Choctaw, and Cherokee nations, numbering sixty thousand souls, among whom were six thousand warriors. They were considerably civilized. Many of them were regular farmers, and possessed stocks of cattle, horses, and swine. Their women had been taught to spin and weave; intermarriages with the whites were frequent, and a numerous and intelligent race of half-breeds had sprung up.

The celebrated Tecumseh had appeared among them, and through the aid of their prophets, and of the prevalent fanaticism, had induced them to believe that the Great Spirit had ordered the destruction of the whites. Apprised by their runners of the capture of Detroit, and of the successes of the British at that period in the northwest, and also being liberally supplied with the implements of war by the British, through the medium of the Spaniards of Pensacola, the Creek nations, by far the most numerous, and a considerable portion of the other tribes in the summer of 1813, took up arms against the United States.

Massacre at Fort Mimms.—On the first beginning of their depredations, the settlers in the Tensaw district sought safety in Fort Mimms on Alabama River, which was garrisoned by one hundred and fifty men under Major Beasley. At eleven o'clock in the forenoon of August 30, about seven hundred warriors issued from the adjoining forest, gave the warhoop, and rushed toward the open gate of the fort which was bravely defended, but at last overwhelmed by numbers, the garrison were driven within it, followed by the savages. The fort had been enlarged, and inclosed an inner line of pickets and some houses, to which the people retired. These they defended with obstinacy for hours, until the Indians set fire to the adjoining buildings, when they gave up all for lost, and a scene of distressing horror ensued. The women and children had sought refuge in the upper story of one of the dwellings and were consumed in the flames, the Indians dancing and yelling around them with the most savage delight. The battle and massacre lasted seven hours, by which time the fort and buildings had been consumed, and over two hundred and fifty men, women, and children massacred, only seventeen escaping out of all who were in the fort. The victory had not been bloodless; the death of near two hundred Indians evinced the desperation of the defense.

This event created great consternation throughout the settlements, and the neighboring States of Tennessee and Georgia raised a large force and carried the war into the enemy's country, burning their towns and defeating them in various battles. The last action was fought on the 27th of March, 1814. The enemy, one thousand

strong, was posted in a strong log fortification at the Great Bend of the Tallapoosa, which river forms the northeastern branch of the Alabama. Gen. Jackson, who had already greatly distinguished himself in the war, commanded on this occasion. His force consisted of three thousand men, and was composed of regulars, militia, and friendly Indians. Finding it impossible to make any impression with artillery upon the walls of the breastwork, which was of logs eight tier deep, the fortification had to be carried by storm. The Creeks were entirely routed and all, but about twenty men, killed in the battle and the subsequent rout. Jackson's loss in killed was forty-nine, and in wounded one hundred and fifty-four.

This decisive victory put an end to the Creek war. In five months two thousand of their warriors, prophets and chiefs had been slain, nearly all their towns and villages burned, and their country occupied by the United States troops. The miserable remnant of the tribe submitted.

Among the distinguished chiefs was the noted *Weatherford*, chief of the Alabamans, a principal instigator of the outbreak, the leader in the capture and massacre of Fort Mimms, and an active commander during the war. Vanquished, but not subdued, the proud warrior and fearless chief, disdaining to be led a captive, boldly advanced through the American camp into the presence of his victorious enemy, surrounded by his staff officers. Bearing in his hands the emblem of peace, he thus addressed Gen. Jackson:

"I am in your power; do with me as you please. I am a soldier. I have done the white people all the harm I could; I have fought them, and fought them bravely. If I had an army, I would yet fight and contend to the last; but I have none; my people are all gone. I can do no more than weep over the misfortunes of my nation. Once I could animate my warriors to battle; but I cannot animate the dead. My warriors can no longer hear my voice; their bones are at *Talladega*, *Tallushatches*, *Emuckfaw*, and *Tohopeka*. I have not surrendered myself thoughtlessly. While there were chances of success, I never left my post nor supplicated peace; but my people are now gone, and I ask it for my nation and for myself. On the miseries and misfortunes brought on my country, I look back with deepest sorrow, and I wish to avert still greater calamities. If I had been left to contend with the Georgia army alone, I would have raised my corn on one bank of the river and fought them on the other; but your people have destroyed my nation. You are a brave man; I rely on your generosity. You will exact no terms of a conquered people, but such as they should accede to; whatever they may be, it would be madness and folly to oppose. If they are opposed, you will find me among the sternest enforcers of obedience. Those who would still hold out, can only be influenced by a mean spirit of revenge; and to this they must not, and shall not sacrifice the last remnant of their country."

The Creek war led to a rapid settlement of the country, by the whites. At the commencement of the war in 1813, there were not in the Mississippi Territory over twenty thousand white inhabitants. Within seven years from that period, they increased tenfold; and the same Territory then formed the States of Alabama and Mississippi, with a population of two hundred thousand.

In August, 1814, several British ships of war arrived at the Spanish port of Pensacola, and took possession of the port with the consent of the authorities, and fitted out an expedition against Port Bowyer, commanding the entrance to the bay and harbor of Mobile. After the loss of a ship of war and a considerable number of men in killed and wounded, the armament returned to Pensacola. Gen. Jackson, then commanding at the South, after in vain remonstrating with the Governor of Pensacola for affording shelter and protection to the enemies of the United States, marched against the place, stormed the town, and compelled the British to evacuate Florida.

Returning to his headquarters at Mobile, he received authentic information that preparations were making for a formidable invasion of Louisiana and an attack on New Orleans. He immediately repaired to that city, which he found in a state of confusion and alarm. By his exertions, order and confidence were restored, the militia was organized, fortifications erected, and finally martial law was proclaimed; which, although in violation of the Constitution, was deemed indispensable for the safety of the country, and a measure justified by necessity. The spies and traitors with which the city had abounded, and who had been industriously employed in seducing the French and Spanish inhabitants from their allegiance, forthwith fled, and the remaining citizens thereupon cordially co-operated with the general in the means of defense.

On the 5th of December, a large British squadron appeared off the harbor of Pensacola, and on the 10th entered Lake Borgne, the nearest avenue of approach to New Orleans. Here, a small squadron of gunboats, under Lieut. Jones, was attacked and after a sanguinary combat, in which the killed and wounded of the enemy exceeded the whole number of the Americans, was compelled to surrender.

On the 22d of December, about twenty-four hundred of the enemy reached the Mississippi, nine miles below New Orleans, where, on the following night, they were surprised by an unexpected and vigorous attack upon their camp, which they succeeded in repelling, after a loss of four hundred men in killed and wounded.

Battle of Plaine Chalmette.—Jackson now withdrew his troops to a point which he had selected for defense, four miles below the city, on a piece of firm ground, a mile in width, bounded on the right by the Mississippi, and on the left by an impenetrable cypress swamp. Extending from the one to the other was a large artificial

ditch, which had been made for agricultural purposes. On the city side of the ditch, intrenchments were thrown up, and surmounted by large quantities of cotton bales. Each flank was secured by an advance bastion, and the latter protected by artillery in the rear. Batteries were also placed on the west bank of the river. On the 28th of December, and on the 1st of January, the works were unsuccessfully cannonaded by the enemy.

At daylight on the morning of the 8th of January, the British, twelve thousand strong, under Gen. Packenham, advanced under the cover of a dense fog across the plain to storm the American works. Behind their breastwork of cotton bales, which no balls could penetrate, six thousand Americans, mostly militia, but the best marksmen in the land, silently awaited the attack. When the British columns had advanced to within three hundred yards of the lines, the whole artillery at once opened upon them a most deadly fire. Forty pieces of cannon deeply charged with grape, canister, and musket balls, mowed them down by hundreds, at the same time the batteries upon the opposite bank of the river opened their fire, while the riflemen in perfect security behind their works, as the British advanced, took deliberate aim and nearly every shot took effect. Through this destructive fire the British left column rushed on with fascines and scaling ladders to the advance bastion, on the American right by the river, and after a close conflict with the bayonet, took possession; when the battery in its rear opened its fire and drove them from it. Col. Regnier, who commanded the forlorn hope which stormed this bastion, as he was leading his men up, had the calf of his leg carried away by a cannon ball. Disabled as he was, he was the first to mount the parapet and receive the American bayonet. On the American left, the British attempted to gain the rear, but the first few sunk in the mud of the cypress swamp, and disappearing, served as a warning to their companions of their fate if they should follow. For an hour and a quarter the British stood exposed to the most destructive and deliberate fire, while the Americans lay in perfect security behind their cotton bales. Such a tornado of cannon balls, grape, and musket shot no troops could withstand, and at eight o'clock the enemy retired in confusion. Elated with their victory, the militia were eager to pursue; but their general would not permit it. The defense of the city was the object, and nothing was to be hazarded that would jeopardize it. Defeat must have inevitably attended an assault made by raw militia upon an intrenched camp of British regulars.

The three commanding generals, Packenham, Kean, and Gibbs, in marshaling their troops at five o'clock in the morning, promised them a plentiful dinner in New Orleans, and gave them "booty and beauty," as the parole and countersign of the day. Before eight o'clock, two of them were carried off in the agonies of death, and the third desperately wounded; leaving upward of two thousand of their men dead, wounded, and dying on the field, and five

hundred prisoners in the hands of the Americans. But six Americans were killed and seven wounded. Of the detachment on the west bank, and in a sortie on the British lines, one hundred and twenty-seven were killed and wounded.

A truce having been granted for carrying away the British dead, the afternoon of the 8th and the whole of the 9th, were employed for this purpose. The British surviving officers determined to withdraw their troops from their position and re-embark in the face of their enemy. This was an object of much difficulty and hazard, and to accomplish it every appearance of a renewal of the assault was kept up, and they remained firm in their position until the tenth day after the battle.

In the meanwhile, they had constructed a sort of road from their encampment to their place of debarkation, and it being through a quagmire, along the margin of a bayou, they had used for the purpose, immense quantities of reeds tied up in bundles. Silently on the night of the 18th, they stole away on this insecure tract. By the treading of the first corps, the bundles of reed gave way, and their followers had to flounder through in the mire. Not only were the reeds torn asunder, but the bog itself became of the consistency of mud. Every step sunk them to the knees, and frequently higher. Several sunk over their heads in the sloughs and perished, the darkness of the night preventing their companions from affording relief. At the mouth of the bayou were a few fishermen's huts, where they halted to embark. Their provisions being exhausted, a few crumbs of biscuit and a small allowance of rum were their only support. Here they were eighty miles from their ships, and having but a few small open boats, occupied ten days in their embarkation. Their ranks thinned, their generals slain, their bodies emaciated with hunger, fatigue, and sickness, they gladly quitted this inauspicious country.

This was the last important action of the war on the land. The rejoicings of victory were speedily followed by the welcome tidings of a treaty of peace that had been concluded in the previous December.

EXPERIENCE OF A KENTUCKIAN AT THE BATTLE OF NEW ORLEANS.

A KENTUCKIAN who was in the battle of New Orleans, has published some of those minor incidents, which bring the scene more vividly to view than can be given by a general narrative.

Colonel Smiley, from Bardstown, was the first one who gave us orders to fire from our part of the line; and then, I reckon, there was a pretty considerable noise. There were also brass pieces on our right, the noblest kind of varmints, that began blazing away as hard as they could, while the heavy iron cannon, toward the river, and some thousands of small arms, joined in the chorus and made the ground shake under our feet. Directly after the firing

began, Captain Patterson—I think he was from Knox County, Kentucky, but an Irishman born—came running along. He jumped up on the breastwork, and stooping a moment to look through the darkness as well as he could, he shouted with a broad North of Ireland brogue, “Shoot low, boys! shoot low! rake them—rake them! They’re comin’ on their all-fours!”

The official report said the action lasted two hours and five minutes, but it did not seem half that length of time to me. It was so dark that little could be seen, until just about the time the battle ceased. The morning had dawned to be sure, but the smoke was so thick that everything seemed covered up in it. Our men did not seem to apprehend any danger, but would load and fire as fast as they could, talking, swearing, and joking all the time. All ranks and sections were soon broken up. After the first shot, every one loaded and banged away on his own hook. Henry Spillman did not load and fire quite so often as some of the rest, but every time he did fire, he would go up to the breastwork, look over until he could see something to shoot at, and then take deliberate aim and crack away. Lieutenant Ashby was as busy as a nailor, and it was evident that the River Raisin was uppermost in his mind all the time. He kept dashing about, and every now and then he would call out, with an oath, “We’ll pay you now for the River Raisin! We’ll give you something to remember the River Raisin!” When the British had come up to the opposite side of the breastwork, having no gun, he picked up an empty barrel and flung it at them. Then finding an iron bar, he jumped up on the works and hove that at them.

At one time I noticed, a little on our right, a curious kind of a chap, named Andrew Odd, one of Captain Higdon’s company, and known among the men by the nickname of “Sukey,” standing coolly on the top of the breastwork and peering into the darkness for something to shoot at. The balls were whistling around him and over our heads, as thick as hail, and Colonel Slaughter coming along, ordered him to come down. The Colonel told him there was policy in war, and that he was exposing himself too much. Sukey turned round, holding up the flap of his old broad brimmed hat with one hand, to see who was speaking to him, and replied: “Oh! never mind, Colonel—here’s Sukey—I don’t want to waste my powder, and I’d like to know how I can shoot until I see something?” Pretty soon after, Sukey got his eye on a red coat, and, no doubt, made a hole through it, for he took deliberate aim, fired, and then coolly came down to load again.

During the action, a number of Tennessee men got mixed with ours. One of them was killed about five or six yards from where I stood. I did not know his name. A ball passed through his head and he fell against Ensign Weller. I always thought, as did many others who were standing near, that he must have been accidentally shot by some of our own men. From the range of the British balls, they could hardly have passed over the breast-

work without passing over our heads, unless we were standing very close to the works, which were a little over breast high, and five or six feet wide on the top. This man was standing a little back and rather behind Weller. After the battle, I could not see that any balls had struck the oak tree lower than ten or twelve feet from the ground. Above that height it was thickly peppered. This was the only man killed near where I was stationed. It was near the close of the firing. About the time that I observed three or four men carrying his body away, or directly after, there was a white flag raised on the opposite side of the breastwork and the firing ceased.

The white flag, before mentioned, was raised about ten or twelve feet from where I stood, close to the breastwork and a little to the right. It was a white handkerchief, or something of the kind, on a sword or stick. It was waved several times, and as soon as it was perceived, we ceased firing. Just then the wind got up a little and blew the smoke off, so that we could see the field. It then appeared that the flag had been raised by a British officer wearing epaulets. I was told he was a major. He stepped over the breastwork and came into our lines. Among the Tennesseans who had got mixed with us during the fight, there was a little fellow whose name I do not know; but he was a cadaverous looking chap and went by that of Paleface. As the British officer came in, Paleface demanded his sword. He hesitated about giving it to him, probably thinking it was derogatory to his dignity, to surrender to a private all over begrimed with dust and powder, and that some officer should show him the courtesy to receive it. Just at that moment, Colonel Smiley came up, and cried, with a harsh oath, "Give it up—give it up to him in a minute!" The British officer quickly handed his weapon to Paleface, holding it in both hands and making a very polite bow.

A good many others came in just about the same time. Among them I noticed a very neatly dressed young man, standing on the edge of the breastwork, and offering his hand, as if for some one to assist him down. He appeared to be about nineteen or twenty years old, and as I should judge from his appearance, was an Irishman. He held his musket in one hand while he was offering the other. I took hold of his musket and set it down, and then giving him my hand, he jumped down quite lightly. As soon as he got down, he began trying to take off his cartouch box, and then I noticed a red spot of blood on his clean white under jacket. I asked him if he was wounded, and he said that he was, and he feared pretty badly. While he was trying to disengage his accouterments, Captain Farmer came up, and said to him, "Let me help you, my man?" The captain and myself then assisted him to take them off. He begged us not to take his canteen, which contained his water. We told him we did not wish to take anything but what was in his way and cumbersome to him. Just then one of the Tennesseans, who had run down to the river,

as soon as the firing ceased, for water, came along with some in a tin coffee-pot. The wounded man observing him, asked him if he would please to give him a drop. "O! yes," said the Tennessean, "I'll treat you to anything I've got." The young man took the coffee-pot, and swallowed two or three mouthfuls out of the spout. He then handed back the pot, and in an instant, we observed him sinking backward. We eased him down against the side of a tent, when he gave two or three gasps and was dead. He had been shot through the breast.

On the opposite side of the breastwork there was a ditch about ten feet wide, made by the excavation of the earth of which the work was formed. In it was about a foot or eighteen inches of water, and to make it the more difficult of passage, a quantity of thornbush had been cut and thrown into it. In this ditch a number of British soldiers were found at the close under the breastwork, as a shelter from our fire. These, of course, came in and surrendered.

When the smoke had cleared away and we could obtain a fair view of the field, it looked, at the first glance, like a sea of blood. It was not blood itself which gave it this appearance, but the red coats in which the British soldiers were dressed. Straight out before our position, for about the width of space which we supposed had been occupied by the British column, the field was entirely covered with prostrate bodies. In some places they were lying in piles of several, one on the top of the other. On either side, there was an interval more thinly sprinkled with the slain; and then two other dense rows, one near the levee and the other toward the swamp. About two hundred yards off, directly in front of our position, lay a large dapple gray horse, which we understood to have been Pakenham's. Something like half way between the body of the horse and our breastwork there was a very large pile of dead, and at this spot, as I was afterward told, Pakenham had been killed; his horse having staggered off to a considerable distance before he fell. I have no doubt that I could have walked on the bodies, from the edge of the ditch to where the horse was lying, without touching the ground. I did not notice any other horse on the field.

When we first got a fair view of the field in our front, individuals could be seen in every possible attitude. Some laying quite dead, others mortally wounded, pitching and tumbling about in the agonies of death. Some had their heads shot off, some their legs, some their arms. Some were laughing, some crying, some groaning, and some screaming. There was every variety of sight and sound. Among those that were on the ground, however, there were some that were neither dead nor wounded. A great many had thrown themselves down behind piles of the slain, for protection. As the firing ceased, these men were every now and then jumping up and either running off or coming in and giving themselves up.

Among those that were running off, we observed one stout-look-

ing fellow, in a red coat, who would every now and then stop and display some gestures toward us, that were rather the opposite of complimentary. Perhaps fifty guns were fired at him, but, as he was a good way off, without effect. Just then it was noticed that Paleface was loading his rifle, and some one called out to him, "Hurra, Paleface! load quick and give him a shot. The infernal rascal is patting his butt at us!" Sure enough, Paleface rammed home his bullet, and, taking a long sight, he let drive. The fellow by this time was from two to three hundred yards off, and somewhat to the left of Pakenham's horse. Paleface said he drew sight on him, and then run it along up his back until the sight was lost over his head, to allow for the sinking of the ball in so great a distance, and then let go. As soon as the gun cracked, the fellow was seen to stagger. He ran forward a few steps, then pitched down on his head and moved no more. As soon as he fell, George Huffman, a big stout Dutchman, belonging to our company, asked the captain if he might go and see where Paleface hit him. The captain said he didn't care; and George, jumping from the breastwork over the ditch, ran out over the dead and wounded until he came to the place where the fellow was lying. George rolled the body over until he could see the face, and then turning round to us, shouted at the top of his voice, "Mine Got! he is a nager!" He was a mulatto, and he was quite dead. Paleface's ball had entered between the shoulders and passed out through the breast. George, as he came back, brought three or four muskets which he had picked up. By this time, our men were running out in all directions, picking up muskets, and sometimes watches and other plunder. One man who had got a little too far out on the field, was fired at from the British breastwork, and wounded in the arm. He came running back a good deal faster than he had gone out. He was not much hurt, but pretty well scared.

VISIT TO THE MAMMOTH CAVE.

THE celebrated Mammoth Cave is about one hundred miles southwest of Louisville, in Edmondson county, Kentucky, in the valley of Green River. Our party, consisting of five, left the hotel for the entrance, which is in a little ravine two hundred feet above Green River, and one hundred below the table-land above; it is screened by forest trees that hide its yawning mouth. About one hundred yards from the entrance at "the narrows," you come to a door, above which a rude *Æolian* harp is fixed. The cool air within, rushing to the warmer atmosphere without, produces a constant current, which passing over it, gives forth wild, mournful notes, in keeping with the solemn grandeur of the cavern. As you continue on, the cave gradually expands into immense proportions, when you reach the "Grand Dome," which is eighty feet

high and three hundred feet in circumference. Having lighted our Bengal lights, we stood enchained in wonder and admiration. The purity of the air was now sensibly felt; the thermometer, the whole year round, stands at fifty-seven degrees. Beyond we came to "Staglamite Hall," where the clusters of stalactites and staglamites produce a singularly beautiful effect. The pure air of the cavern now began to act upon our frames, and rendered us buoyant and elastic to a high degree. We could not repress our exuberance of feeling, and ran, jumped and hallooed, like boys just let out from school.

The "Devil's Arm-chair," the "Elephant's Head," the "Lover's Leap," the "Gothic Chapel," and the "Cinder Pile," in turn arrested our attention, by which time we had got four miles from the entrance, when we retraced our steps to the main cave, and after an absence of six hours, found comfortable quarters at the hotel.

At daylight the next morning, the guide came with a lamp for each, and a gallon of oil slung on his back, and our party, increased to eight, again started for a farther exploration of the great cavern. The enchanting strains of the Æolian harp soon greeted our ears, then gradually died away in the distance, as we, leaving the scene of the yesterday's explorations on our right, continued our journey in the "Main" cave, until we came to an apartment which was occupied by a gentleman, who had been there for months, in the hope of curing an affection of the lungs. He had improved somewhat; but I am satisfied that no permanent cure can be effected by this mode of living.

The next prominent point was the "Bottomless Pit." Here above us rose the dome, and far below sunk the pit; the distance from the top of the one to the bottom of the other being nearly three hundred feet; the guide threw a blazing newspaper, saturated with oil, into the pit; the illumination was beautiful, showing every fissure in the walls of this immense shaft. Leaving the pit, over which we crossed by a frail bridge, we after awhile descended a ladder to the first river—the "River Styx," and then to "Red River," and last to "Echo River," the deepest and widest of the three, being about ten feet deep, and a quarter of a mile in width. In several places we discovered a slow current. It has been ascertained that the surface of this river is nearly upon a level with the surface of Green River, which passes the Cave House but a short distance from the lawn. It must, of course, flow into Green River, as they usually rise and fall together.

This point is five miles from the entrance. Five miles! It is a long distance from the light of the glorious sun. Miniature rivers and mountains, vales and cliffs had been passed, that had never in all previous time drank in the light of day. The transparency of the water is astonishing, as we could see the sand and pebbles by the light of our lamps as plainly as if in air. The guide told us the water was very low, and we found that we had almost to

prostrate ourselves in the boat, that we might pass under the roof, which appears like an arch sprung from one side of the cave to the other. This was soon after leaving the shore.

One 4th of July, some three or four years since, a party of two ladies and two gentlemen, with the guide, crossed the river, which was then slightly rising, and made a visit of some six or eight hours. They enjoyed themselves as all do who see the wonders of the cave beyond the rivers, little thinking of the danger which they had left behind, and which was increasing each moment of their stay. Upon their return, they were amazed and stupified to find the water had risen some four or five feet in their absence. Consternation seized upon them for a time, as visions of starvation, in utter darkness, flashed upon their minds. They gave themselves up for lost. They knew not when the water would fall, or whether they could repass the low and arched portion of the roof spoken of above. They resolved, however, to try, and that quickly, as each fleeting moment added to the fast rising flood, and a little delay might cut them off forever from the cheerful light of day, and anxious friends without. They stepped into the small and tottling flat-boat with beating hearts; they pushed boldly out, the guide in the bow. In a little time, they see the dreaded arch by the light of their torches, and instantly feel the descending roof with their hands. All now lay down on their backs in the sand and water which was at the bottom of this craft, and succeeded in squeezing themselves and their cockle-shell of a boat through the opening left by the still rising water. One hour longer, and their egress would have been utterly stopped! On their arrival at the mouth, they found there had been a tremendous fall of rain, which had suddenly raised Green River as much as it had its counterpart in the cave.

About half way across the river, the cavern expands into mammoth proportions, and the number of chambers and recesses above are innumerable. Here is the remarkable echo which gives its name to the river. A slight stroke of the oar upon the frail boat is repeated millions of times, receding at each successive echo, until the sound dies away in the most distant chambers above you, assuming the melting tones of the wind harp. The ear is never surfeited with this musical echo, and all the different noises we could conjure up were tried over and over again with the same harmonious effect. The most bewitching melody is returning to the expectant ear from the musical apartments above, whatever may be the cause. A pistol was discharged, and thunder burst upon us, as grand and startling as any ever heard above; always, however, giving us a strain of sweet melody as it left us.

During our voyage, we saw many of the eyeless fish floating in the clear water, without any apparent concern for their safety. With a scoop-net we caught several, and examined them closely. They are white, from four to six inches in length, and entirely destitute of eyes. They are a new species, wonderfully suited to their

dark and silent abode ; being so constituted as to possess an external covering, whose sense of touch is peculiarly delicate, enabling it to perceive the slightest impulse given to the water, and from whence it proceeds. The fish, as a whole, resembles the ordinary catfish of our rivers, but it has no thorns for its defense, its delicate sense of touch answering in the place of all warlike weapons.

Some few miles beyond the river, we came to "Cleveland's Cabinet," which cannot be adequately described. Conceive, if you can, yourself standing under an arch, some twenty feet in height and fifty in width, incrustated with a thick coating of frost, through which is protruding in all directions, buds, vine-tendrils, rosettes, sun-flowers, cactus leaves—everything from the most exquisite and perfect lily, to the elegance and taste of the most elaborate Corinthian capitol, fashioned from a material the most delicate, and all of a pearly white ; and you may have some conception of this unique cabinet. At some points, the roof is entirely studded with snow-balls, which have apparently been frozen there, and present innumerable mirrors to your lamps, wherein the light is reflected with sparkling brilliancy as if from millions of diamonds. Sulphate of soda, as pure as it can be, is under your feet in piles. Every turn you make presents some new and beautiful vegetable form of the utmost delicacy.

After leaving the cabinet, which is near a mile in length, you are arrested by the "Rocky Mountains"—truly and appropriately named, as any who may ever cross them will surely acknowledge. Gloom of a peculiar nature characterizes this spot above all others. Pen and pencil will both fail in giving the slightest idea of the magnitude and grandeur of this awful place. We lit our Bengal lights, and were silent with awe.

Still further on, and thirteen long and weary miles from the entrance, we came to the end ; here is the gem of this whole cavern. It is named "Serena's Bower." This beautiful spot is guarded by an aperture which is very difficult to enter. The interior of the Bower is a fit termination to so vast a cavern, amply repaying the determined explorer for his energy in reaching it.

It is small and deep, bottom, roof, and sides being entirely covered with stalactite formations. From the ceiling, the stalactites join on the sides, and run down to and form the floor of this most beautiful grotto. The roof is shaped much like an umbrella. The idea that strikes you is, as if from a common center in the roof, that the long hair from the heads of a hundred females had been let down, and that it had been dropped from that center in the most graceful manner imaginable to the walls, down which it flows in most grotesque confusion, forming miniature grottoes, surrounded with fan like pillar, and when illuminated interiorly, producing a most exquisite picture. This is a fairy realm, and this the abode of their queen.

In the side of the bower, and about three feet from the floor, is a basin of the most limpid water, around the edge of which the

most curiously shaped pillars form, as it were, a fence for its protection. Hanging a lamp inside of the columns and above the water, it illuminated this magic fountain, and drew from each one present an exclamation of wonder and delight. We sat down and quietly feasted our eyes with the rare and exquisite beauties of this lovely spot. We had been over six hours constantly traveling and wondering, and were now much impressed with our utter exclusion from our fellow-beings.

Six hours longer, and we were again within sight of the heavens, with the sun, red, and low in the west.

ADVENTURES OF OLIVER.

IN August, 1812, immediately after the disgraceful surrender of Hull, about five hundred Indian warriors laid siege to Fort Wayne, a dilapidated structure of wood which had been built in Wayne's campaign, near the northeastern corner of Indiana, at the junction of the St. Joseph's and St. Mary's Rivers, main branches of the Maumee. The garrison, amounting to less than one-seventh of their number, was commanded by Captain Rhea, an old officer broken down by intemperance, and of a timid disposition. As at that period the whole surrounding region was a wilderness, and they were far from succor, their danger was imminent.

They were finally saved from the horrors of an Indian massacre by the daring bravery and address of a young Virginian, named William Oliver. This young man, scarce twenty-one years of age, to a slender and delicate, though active figure, united in a high degree the qualities of undaunted courage, enthusiasm, firmness, and sagacity. A resident of Fort Wayne, he was, at this time, temporarily absent at Cincinnati, and learning on his return route, that the Indians had appeared before the fort, he voluntarily hurried back to the city to urge the troops stationed at that point, to hasten to its relief. This being accomplished, he set out again with all speed toward the fort, intending to reach it and penetrate through its swarm of surrounding savages, in advance of the relief, for the purpose of encouraging the garrison to persevere in its defense until their arrival.

At St. Mary's River he came to an encampment of Ohio militia, with whom was Thomas Worthington, of Chilicothe (afterward Governor of Ohio), then on the frontier as Indian commissioner, to whom Oliver communicated his intention of entering the fort, or of perishing in the attempt. Worthington had been originally opposed to the policy of declaring war; but now that it had been commenced, was zealous for its vigorous prosecution; yet this did not save him from the taunt of an ill-bred brother officer, who accused him of a want of patriotism. Being a high-spirited man of the keenest sense of honor, this accusation stung

Worthington to the quick, and he felt eager to embark in any enterprise, however desperate, to show the unjustness of the charge, and his willingness to peril his all for his country. In him Oliver found a zealous confederate, notwithstanding old experienced frontiersmen endeavored to dissuade him from the dangerous undertaking. Unitedly, they induced sixty-eight of the militia, and sixteen Shawanee Indians to accompany them.

On the second day's march, thirty-six of the party consulting their fears, secretly deserted their companions, and returned to the main body. The remainder continued their route, and at sunset in their camp, heard the evening gun from the fort, through an intervening forest of twenty-four miles. As the reduced party was not strong enough to encounter the enemy, Worthington was very reluctantly induced to remain at this point with his men, while Oliver, with three friendly Indians, pushed on. Being well armed and mounted, they started at daybreak the next morning, proceeding with great caution. When within five miles of the fort, they perceived holes which the Indians had dug on each side of the road for concealment, and to cut off all who should approach toward the place. Upon observing these, they abandoned the main road, struck off across the country, and reached the Maumee one and a half miles below the fort. Tying their horses in a thicket, they stole cautiously along through the forest to ascertain if the Indians had obtained possession. Oliver at length discovered, with feelings of joy, the American flag waving above the fort; but not deeming even this as conclusive, he approached on the east side so near as not only to discern the blue uniform of a sentinel, but to recognize in his countenance that of an acquaintance.

Having satisfied himself on this point, they returned, remounted their horses, and taking the main road, moved rapidly onward. Upon reaching the gate of the esplanade, they found it locked, and were thus compelled to pass down the river bank, and then ascend it at the northern gate. They were favored in doing so, by the withdrawal of the savages from this point, in carrying out a plan, then on the point of consummation, for taking the fort by an ingenious stratagem.

For several days previous to this time, the hostile chiefs, under a flag of truce, had been holding intercourse with the garrison. In their interviews with Captain Allen, that officer had shown such a spirit of friendship, that they felt persuaded that it could be made available at the proper moment, to put him and his men in their power. They had accordingly, arranged their warriors in a semi-circle on the west and south sides of the fort, and at a short distance from it. Five of the chiefs, under pretense of treating with the officers of the garrison, were to pass into the fort, and gain admittance into the central room with scaling knives and ladders secreted under their blankets. Then, at a certain signal, they were to assassinate the two sentinel officers, seize Captain

FEAT OF MIKE FINK.

"Carpenter and Mike used to fill a tin-cup with whisky and place it by turns on each other's heads and shoot at it, with a rifle, at the distance of seventy yards. It was always bored through without injury to the one on whose head it was placed."

Rhea, and with threats of instant death, if he did not comply, and promises of safety if he did, compel him to order the gates to be thrown open for the admission of their warriors.

The plan thus arranged, was in the act of being carried into execution, at the moment when Oliver and his companions reached the gate. Their safe arrival at that particular moment, may be justly considered as miraculous. One hour sooner, or one hour later, would have, no doubt, been inevitable destruction both to himself and escort; the parties of Indians who had kept close guard for eight days previous, upon the roads and passes in different directions, having all at that moment, been called in to aid in carrying the fort.

Winnemac, Five Medals, and three other hostile chiefs bearing the flag of truce, under which they were to gain admittance to carry out their treacherous intentions, were surprised by suddenly meeting at the gate, Oliver and his companions. Coming from different directions, and screened by the angles of the fort, they were not visible to each other until that moment. Winnemac showed great chagrin, uttered an ejaculation of disappointment, and hastily returning to the Indian camp, informed the chiefs and warriors that the stratagem was defeated.

Oliver immediately upon his arrival wrote a hasty letter to Worthington, describing the situation of the fort, which he sent by the Indians. Luckily their movements were not observed, until they had actually started from the garrison gate. They now put spurs to their horses, and dashed off at full speed. The hostile Indians were instantly in motion to intercept them; the race was a severe and perilous one, but they cleared the enemy's line in safety, and then their loud shout of triumph rose high in the air, and fell like music upon the ears of the beleaguered garrison. They safely delivered the letter, and a few days after, General Harrison arrived with reinforcements, the enemy having continued the siege until within a few hours of his arrival, and that too, with such perseverance, that the vigilance of the garrison alone saved them from a general conflagration from the burning arrows of the savages.

Young Oliver rendered very important services at the two sieges of Fort Meigs, in the succeeding year, during which he encountered no less peril than in that related. He was there as an officer in the commissary's department. General Harrison, at the first siege, desired some person to communicate with General Green Clay, who was approaching to its relief with a body of Kentucky volunteers, and to direct his movements, as there was great danger of his falling into an ambuscade. The selection of one suited to this task was of no small difficulty. The peculiar qualities of Oliver, his knowledge of the country, and of Indian warfare, were such that the selection at once fell upon him. This dangerous enterprise, for the Indians were already in considerable numbers around the fort, he successfully executed.

The day before Oliver reached the reinforcements, Captain Leslie Combs, filled with the patriotic ardor of the Kentuckians, volunteered to go into Fort Meigs, taking with him three or four Shawanee Indians, and an equal number of his own men, to apprise the garrison of their approach. When within a mile, he was attacked by the Indians, and after a gallant resistance, was compelled to retreat with the loss of nearly all of his companions.

Oliver, notwithstanding, determined to make the attempt. General Clay remonstrated with him upon its danger, pointed to the failure of Combs, and stated that it was impossible to penetrate the enemy's lines. Oliver, in reply, spoke of his knowledge of the country, and of Indian stratagem, and urged the importance of Harrison's knowing his approach, to form his plans of operations for breaking up the siege. He finished by expressing his determination to go at all hazards, unless he, Clay, interposed his absolute command against it.

Oliver ordered his boat along with fifteen picked men from the Ohio militia, and got aboard. As he was about leaving, Clay grasped his hand and said: "Farewell, Oliver, we shall never see you again!"

Oliver and his companions approached the fort about midnight. Everything was in utter darkness, and the only evidence of localities was the cannonading from the enemy's batteries on the opposite bank of the Maumee, and the branches of a tall oak standing within the fort. Information having been conveyed the day previous to Harrison by two deserters, that the enemy intended to assault the fort that night, the lights had been extinguished, and the garrison were on their arms awaiting their approach: mistaking Oliver's party for their advance, they were fired upon by the sentinels, but without injury. Harrison having had an interview with Oliver, made arrangements for the ensuing day—a day which is memorable for the successful landing of Clay, the gallant sorties from the garrison upon the enemy's batteries, and the defeat and massacre of Dudley upon the opposite bank of the Maumee.

Two months later, the British and Indians, to near the number of five thousand, again invested Fort Meigs. The post being then under the command of Gen. Clay, that officer called Oliver to his quarters, and stated that he was fearful that the fort would fall before the overwhelming force of the enemy. He implored Oliver to endeavor to make his way through the Indians to Gen. Harrison—supposed to be at Upper Sandusky, seventy miles distant—represent their perilous condition, and urge his assistance. "I will," said the general, "reward you liberally, if you succeed in the attempt." "I shall not," Oliver rejoined, "put my life in the scale against money or promotion. My country has higher calls upon me than these, and from a sense of duty to her, I will make the trial."

Col. John Miller, of the 19th Regiment United States Infantry, and afterward Governor of Missouri, was in the fort, second in

command to Clay. On learning Oliver's intentions, he accosted him and inquired if the report was true. "Yes!" was the answer. "Well," rejoined he, much excited, "you are a fool! by ——! Why is it that *you* are always called upon for these perilous services?"

Clay having requested Oliver to take with him any of his officers or men, he applied to one of the regular officers, but he had not sufficient nerve, and begged to be excused. At length he succeeded in obtaining, as companions, Capt. M'Cune, of the Ohio militia, and also one of the Petersburg volunteers.

About nine o'clock the same night, Oliver and his party rode out of the gate of the fort. Just at that moment the British band struck up the tattoo on the opposite bank of the Maumee; the music sounded sweetly across the intervening water, serving, in a great measure, to drown the tramp of their horses.

They had got scarcely a quarter of a mile from the fort, when they suddenly came upon a camp of Indians. Disturbed by the noise of their approach, the savages sprang up and ran toward them, upon which they reined up their horses and awaited the movements of their enemy. For a few moments, their suspense was agonizing. Luckily their animals, as if endowed with human intelligence and fully conscious of the danger, stood perfectly still, and the Indians passed around them without making any discovery in the thick darkness. Finally they moved away to throw the party off their guard; then Oliver and his companions, taking a different direction, put spurs to their horses, and dashed forward into the almost impenetrable forest of the Black Swamp.

M'Cune being unaccustomed to the woods, got separated from Oliver and the other, who continued on in the right direction, the Indians being in full pursuit on horseback. In a short time their bodies were covered with bruises from contusions against the trees, and they were nearly naked, the briers and brambles having torn off their clothes. At nine o'clock the next night, Oliver arrived at Upper Sandusky, and there learning that Harrison was in the vicinity of Fort Stephenson, he, notwithstanding his fatigue, continued on, rode all that night, and the next day about 11 A. M., arrived at the general's camp in the vicinity of Seneca, after a continuous ride of more than one day and two entire nights, during which he had passed over a hundred miles.

M'Cune having been lost in the Black Swamp, did not arrive at headquarters until the next day. Harrison wishing to retain Oliver for other service, sent M'Cune back to Gen. Clay with a verbal message of his intentions. He arrived in safety, although after a narrow escape, having been pursued for several miles by a party of mounted Indians.

The opportune arrival of M'Cune saved the fort, as the intelligence he brought preserved them from an ingeniously devised stratagem of Tecumseh, which was put into execution that day, as we here relate.

Toward evening, a body of British infantry was secreted in a ravine below the fort, and the cavalry in the woods above, while the Indians, with a part of the British infantry, were stationed in a third direction in the forest on the Sandusky road. About an hour before dark they commenced a sham battle on that road. A heavy firing of rifles and muskets was heard, the Indian yell broke upon the ear, and the savages were seen attacking with great impetuosity a column of men, who were soon thrown in confusion; they, however, rallied, and in turn the Indians gave way. The idea at once flew through the fort, that a severe battle was going on between the enemy and an approaching body of reinforcements. The troops flew to arms, and with their officers demanded to be forthwith led to the support of their friends. Gen. Clay was unable to explain the firing, but wisely concluded from the information received in the morning from Capt. M'Cune, that there could be no reinforcements in the neighborhood of that fort; yet it required all his firmness to resist the importunity of his officers and men to be led to the scene of action. The enemy finding that the garrison could not be drawn out, and a heavy shower of rain beginning to fall, terminated their sham battle. Had it not been for the intelligence conveyed by M'Cune, the garrison would have fallen victims to this admirably planned maneuver and been totally destroyed, as they numbered only a few hundred, while their enemy amounted to several thousand strong.

Although Oliver was, in this instance, but the indirect agent of saving Fort Meigs from the horrors of an Indian massacre, yet when taken in connection with his efforts in behalf of the garrison at Fort Wayne, it is evident that but few individuals have ever rendered so great services of this kind to their country. He died a few years since at Cincinnati, where he had held the appointment of postmaster during the administration of President Taylor.

INCIDENTS OF EMIGRATION.

THE annexed engraving represents a halt for the night of two emigrants with their families—the one, perhaps, has left his native soil and the inheritance of his fathers, and seeks in the Far West for that independence in his worldly circumstances, which he has tried in vain to gain from the stony and barren patrimonial homestead; the other, perhaps, is one who has looked on his rapidly increasing family, and ambitious of doing something for his children while in the prime of life, or anxious to see them comfortably settled around him, that his old age may be cheered by their presence, has resolved to go to the *Far West*, the land which is represented as flowing with milk and honey.

Resolved to emigrate, the emigrant collects together his little property, and provides himself with a wagon and with two or three

horses, as his means permit; a rifle, a shot gun, and an ax slung over his shoulder, form part of his equipment, and his trusty dog becomes the companion of his journey. In his wagon are placed his bedding, his provisions, and such cooking utensils as are indispensably necessary. Everything being ready, the wife and children take their seats, the father of the family mounts the box, and now they are on the move. As they pass through the village which has been to them the scene of many happy hours, they take a last look at the spots which are hallowed by association; the church with its lowly spire, an emblem of that humility which befits the Christian; and the burial-ground, where the weeping willow bends mournfully over the head-stone which marks the parent's grave; nor do the children forget their play-ground, nor the white school-house, where the rudiments of education have been instilled into their minds.

Their road is at first comparatively smooth, and their journey pleasant; their way is checkered with divers little incidents, while the continual changes in the appearance of the country around them, and the anticipation of what is to come, prevent those feelings of despondency which might otherwise arise on leaving a much loved home. When the roads are bad or hilly, the family quit the wagon, and plod their way on foot. At sunset, their day's journey finished, they halt, perhaps, in the forest by the roadside, to prepare for supper, and to pass the night. The horses are unharnessed, watered, and secured with their heads to the trough, or else hopped out to grass. Their frugal supper over, the emigrants arrange themselves for the night, while their faithful dog keeps watch. Amid all the privations and vicissitudes in their journey, they are cheered by the consciousness that each day lessens the distance between them and the land of promise, whose fertile soil is to recompense them for all their trials.

Gradually as they advance west, the roads become more and more rough, and are only passable in many places by logs having been placed side by side, thus forming what are termed *corduroy* roads. The ax and the rifle of the emigrant, or *mover*, as he is termed in the West, are now brought daily, and almost hourly into use. With the former he cuts down saplings or young trees, to throw across the roads, which in many places are almost impassable; with the latter he kills squirrels, wild turkeys, or such game as the forest affords him; for by this time his provisions are exhausted. If perchance a buck crosses his path, and is brought down by a lucky shot, it is carefully dressed, and hung up in the forks of the trees; fires are built, and the meat is cut into small strips, and smoked and dried for future subsistence.

The road through the woods now becomes intricate, the trees being merely felled and drawn aside, so as to permit a wheeled carriage to pass; and the emigrant is often obliged to be guided in his route only by the *blaze* of the surveyor on the trees, and at every few rods to cut away the branches which obstruct his passage.

The stroke of his ax reverberates through the woods, but no answer meets the woodsman's ear, to assure him of the presence of friend or foe. At night in these solitudes, he sees and hears the wolves stealing through the gloom, and snuffing the scent of the intruders; and now and then the blood-shot eye of the catamount glares through the foliage.

Days and weeks, nay, perhaps even months of unremitting toil, pass before he has gained the end of his journey. At length he arrives at the landmarks which indicate to him the proximity of his own possessions. A location for the cabin is now selected near a small stream of running water, and if possible, on the south side of a slight elevation. No time is lost. The trees are immediately felled, and shortly you can perceive a cleared space of ground of perhaps a few rods in circumference. Stakes, forked at the top, are driven into the ground, on which are placed logs, and the chinks between these are stopped with clay. An inclosure is thus thrown up hastily, to protect the inmates from the weather. The trunks of the trees are rolled to the edge of the clearing, and surmounted by stakes driven crosswise into the ground: the tops of the trees are piled on the trunks, thus forming a brush fence. By degrees the surrounding trees are killed by *girdling*. Some that are fit to make into rails are cut down and split, while others are either left to rot, or are *logged* up and burned.

The next season a visible improvement has taken place. Several acres have been added to the clearing. The emigrant's residence begins to assume the appearance of a farm. The brush fence is replaced by a worm fence. The temporary shanty is transformed into a comfortable log-cabin. And although the chimney is built of only small sticks piled together, and filled in between with clay, and occupies an end of the cabin, it shows that the inward man is duly attended to; and the savory fumes of venison, of the prairie hen, and of other good things, prove that the comforts of this life are not forgotten, and that due respect is paid to that important organ in the human economy—the stomach.

In a few years or even months, the retired cabin, once so solitary, becomes the nucleus of a little settlement; other sections and quarter sections of land are entered at the land office, by new comers. New portions of ground are cleared, cabins are erected, and in a short time, the settlement can turn out a dozen efficient hands for a *raising bee*, or *logging bee*, etc. A saw-mill is soon in operation, on one of the neighboring streams; the log-huts receive a poplar weather-boarding, and as the little settlement increases, a school-house and church appear; a mail is established, and before many years elapse, a fine road is made to the nearest town; a stage-coach, which runs once or twice a week, connects the place with the populous county to the east of it.

A generation passes over. The log buildings have all disappeared. In their places stand handsome edifices of brick or wood, painted of a pure white, and the settlement has all the conveniences

and refinements of its parent settlements on the Atlantic frontier. The emigrant himself is now an aged man. His locks are silvered by time. His toils are over. Some fine summer's evening he may be seen seated in the porch of his dwelling, his frank, open countenance beaming with delight, as he relates the tale of his early adventures to his little grandchildren, who, clustering about his knees, drink in every word with intense interest.

THE PUBLIC DOMAIN.

At the formation of the Federal Government, all the lands not owned by individuals belonged to the States respectively, within whose limits they were situated; for as that government consisted of a confederacy of States, each of which retained its proprietary rights and proper sovereignty, the United States acquired by the Union no property in the soil. The uninhabited wilds lying to the west, and as yet not clearly defined by established boundaries, were claimed by the adjacent States, and portions of them by foreign nations under conflicting claims, but all subject to the paramount Indian title. The title, therefore, of the United States to that country is derived: 1. From treaties with foreign nations; 2. From treaties with the Indian tribes; and 3. From cessions by individual States, members of the Union.

The treaties with foreign nations by which territory has been acquired, are those of 1783 and 1794 with Great Britain; of 1795 and 1820 with Spain; and of 1803 with France. It is sufficient to say of these treaties, that by them we acquired Louisiana and the Floridas, and extinguished all the claims of foreign nations to the immense regions lying west of the several States, and extending to the Pacific Ocean. The lands east of the Mississippi, and contained within the boundaries designated by the treaty with Great Britain of 1783, were claimed by individual States, and the title of the United States to that territory is derived from cessions made by those States.

These cessions embrace three distinct tracts of country.

1. The whole territory north of the River Ohio, and west of Pennsylvania and Virginia, extending northwardly to the northern boundary of the United States, and westwardly to the Mississippi, was claimed by Virginia, and that State was in possession of the French settlements of Vincennes and Kaskaskia, which she had occupied and defended during the Revolutionary war. The States of Massachusetts, Connecticut and New York set up to portions of the same territory claims, which, though scarcely plausible, were urgently pressed upon the consideration of Congress. The United States, by cessions from those four States, acquired an indisputable title to the whole. This tract now comprises Ohio, Indiana, Illinois, Wisconsin and Michigan.

2. North Carolina ceded to the United States all her vacant lands lying west of the Alleghany Mountains within the breadth of her charter. This territory is comprised within the State of Tennessee.

3. South Carolina and Georgia ceded their titles to that tract of country which now composes the States of Alabama and Mississippi.

The earliest law passed by Congress, for the sale of the lands of the United States, provided for its disposal to purchasers in tracts of four thousand acres each; and did not allow the selling of a smaller quantity, except in case of the fractions created by the angles and sinuosities of the rivers. The law was highly unfavorable to actual settlers, as it prevented persons of moderate property from acquiring freeholds; and would have enabled persons of wealth to become proprietors, and to sell the land to the cultivator at exorbitant prices, or else have forced the latter to be tenants under the former. With the notions that many of our statesmen had derived from Great Britain, and which, notwithstanding the recent rupture of our connection with that country, still remained impressed upon us with all the force of education and association, it is perhaps not surprising that they should have deemed it advantageous to create a landed aristocracy; but it is more probable that the error arose from accident and carelessness. It is curious, however, to look back at these first awkward attempts at republican legislation, and to see how gradually we shook off the habits of thought in which we had been trained, and how slowly the shackles of prejudice fell from around us.

The first step toward a change in that objectionable system, which contemplated sales in large tracts and on credit, was the passage of the act of the 10th of May, 1800, which provided for the sale of land in sections and half sections.

The plan of selling land in sections and half sections, the former of six hundred and forty acres, and the latter of three hundred and twenty acres, was first proposed in Congress by General William H. Harrison, when a delegate from the Northwestern Territory, in 1799, and produced a sensation which showed how little mature thought had been bestowed on the subject in that body. The law was certainly one of the most beneficial tendency; and its passage constitutes an epoch in the history of this country of perhaps greater magnitude and interest than any other in our annals; for no act of the government has ever borne so immediately upon the settling, the rapid improvement, and the permanent prosperity of Western States. The ordinance of 1787 is justly regarded as an instrument of vast importance, and singularly propitious consequences; but in its practical operation and salutary results, it sinks in comparison with the system of selling the public domain, which has placed the acquisition of real estate within the reach of the laboring classes, and rendered the titles to land perfectly secure. It is understood that this act was not the exclusive production of

CARAVAN OF EMIGRANTS FOR CALIFORNIA
(Crossing the Great American Desert in Nebraska.)

General Harrison; the discriminating genius of Mr. Gallatin, then a member of Congress, was also employed in its production; and although the earnest request of that distinguished citizen, and the circumstances of the moment, forced Mr. Harrison to submit to the credit of being its sole author, the natural ingenuousness of the latter induced him subsequently, when he could do so with propriety, to explain his own part in the proceeding, and to give Mr. Gallatin the honor due him. The bill was warmly attacked by some of the ablest men in the lower house. Mr. Harrison defended it alone; he exposed the folly and iniquity of the old system; demonstrated that it could only result to the benefit of the wealthy monopolist, while the hardy and useful population, which has since poured into the fertile plains of Ohio, and made it in thirty years the *third* State in the Union, must have been excluded from her borders, or have taken the land on terms dictated by the wealthy purchasers from the government.

In 1802, a convention was held at Vincennes, of which General Harrison was president, at which a petition was adopted, praying of Congress that a provision of one thirty-sixth part of the public lands within the Territory of Indiana be made for the support of schools within the same; and on the 2d of March succeeding, Mr. Randolph, the chairman of a committee to whom this subject was referred, made a favorable report. This was the commencement of our beneficent system for the support of public schools.

As early as 1803, petitions were presented to Congress, praying for various improvements or changes in the mode of selling lands, among which the most prominent suggestions were: to sell the land in smaller tracts; to charge no interest on sales; to sell for cash; to reduce the price; and to make grants of small tracts to actual settlers.

On the 23d of January, 1804, a report was made in the House of Representatives, recommending the reduction of the size of the tracts, and the sale of quarter sections in the townships which had before been offered in half sections, and the sale of half sections in those which had been offered in whole sections.

The present admirable system of selling the public lands, may be dated as having commenced with the act of May 10, 1800, though several important improvements have been made since that time. It is not necessary to notice all these changes. All the lands within each district, are surveyed before any part is offered for sale; being actually divided into townships of six miles square, and each of these subdivided into thirty-six sections of one mile square, containing six hundred and forty acres each. All the dividing lines run according to the cardinal points, and cross each other at right angles, except where fractional sections are formed by large streams, or by an Indian boundary line. These sections are again divided into quarter, half-quarter, and quarter-quarter sections, containing one hundred and sixty, eighty, and forty acres respectively, of which the lines are not actually surveyed, but the

corners, boundaries, and contents, are ascertained by fixed rules prescribed by law.

Previous to the year 1820, the price demanded by government for its land, was two dollars per acre, one-fourth of which was paid at the time of purchase, and the remainder in three equal annual instalments; a discount of eight per cent. being allowed to the purchaser, if the whole was paid in advance. This arrangement, however liberally intended, was found to be productive of great mischief. Large purchases were made by individuals, who had not the means of payment. Persons who had only money enough to pay the first instalment on one or more tracts, disbursed their whole capital in making the prompt payment required at the time of entry, depending on future contingencies for the power to discharge the other three-fourths of their liabilities. This was done, in most cases, without the least intention to defraud; the risk of loss being entirely on the side of the purchaser, and the allurements to make the venture, such as few men have the resolution to withstand. A rapid increase in the value of lands was generally anticipated, and many expected to meet their engagements by selling a portion of the land at an enhanced price, and thus securing the portion retained; some were enticed by a desire to secure choice tracts, and others deluded by the belief that they could raise the sums required, within the appointed time, by the sale of produce made on the soil. A few, by industry, or by good fortune, realized these anticipations, but a great majority of the purchasers, at the expiration of the term limited for the payment of the last instalment, found their lands subject to forfeiture for nonpayment. Instead of rising, the price of land had fallen, in consequence of the vast quantities thrown into the market; and the increase in the amount of produce raised, so far exceeded the increase of demand for consumption, that the farmer was unable to realize any considerable profits from that source, while the expenses of clearing and improving his farm required both labor and money. Money was scarce, the country was new, without capitalists, moneyed institutions, or manufacturers, and with little commerce; and while the sale of lands, and the importation of foreign goods required to supply the wants of the people, constituted an immense and an eternal drain of the circulating medium, across the mountains, the industry of the people was not yet brought into action, nor the resources of the country developed, to a sufficient extent to afford the means of bringing the money back. Ours was a population of buyers. The demand for money induced the establishment of local banks, whose notes were at first eagerly taken, but soon depreciated, having the usual effect of driving better money out of circulation, without substituting any valuable medium in its place. Bank debts were added to land debts. This state of things existed chiefly from 1814 until 1820.

A period of distress occurred which reached its lowest point of depression in 1819. The whole population trembled upon the

brink of ruin; and had the federal government proved a rigid creditor, this extensive and beautiful country must have presented a vast scene of desolation. The purchasers of land had become settlers; they had built houses and opened fields upon the soil, the legal title to which remained in the government. A few could have saved their homes by the disposal of other property; the many could not purchase the roof that sheltered them, at any sacrifice which they might have been willing, or perhaps able, to make. Yet it is not to be inferred that the people were destitute, or desperately poor; far from it—they were substantial farmers, surrounded with all the means of comfort and happiness—except *money*. To have driven such a people to extremity, would have been ungenerous and fatally unwise; for now that the crisis has passed, we may say without offense or danger, that there is no calculating the extent of the private misery, and the public convulsion, which such a policy would inevitably have produced. The enlightened statesman (Mr. Crawford), who at that time presided over the Treasury department, saw, and properly estimated the wants and feelings of that part of the community, together with the relative duty of the government. A system of relief was devised, which, by extending the time of payment, and authorizing purchasers to secure a portion of their lands by relinquishing the remainder to the government, in the course of eight years extinguished a large portion of those debts, and has eventually, it is believed, absorbed the whole, without injury to the citizen, and with little loss to the government. Upon granting relief to the land purchasers, the credit system was abolished; and lands are now sold by the government at one dollar and twenty-five cents per acre, payable in cash.

THE RANGER'S ADVENTURE.

THOMAS HIGGINS, a native Kentuckian, in the late war enlisted in a company of rangers, and was stationed in the summer of 1814, in a block-house or station, eight miles south of Greenville, in what is now Bond County, Illinois. On the evening of the 30th of August, a small party of Indians having been seen prowling about the station, Lieutenant Journay with all his men, twelve only in number, sallied forth the next morning, just before daylight, in pursuit of them. They had not proceeded far on the border of the prairie, before they were in an ambuscade of seventy or eighty savages. At the first fire, the lieutenant and three of his men were killed. Six fled to the fort under cover of the smoke, for the morning was sultry, and the air being damp, the smoke from the guns hung like a cloud over the scene; but Higgins remained behind to have "one more pull at the enemy," and avenge the death of his companions.

He sprang behind a small elm, scarcely sufficient to protect his body, when, the smoke partly rising, discovered to him a number of Indians, upon whom he fired, and shot down the foremost one.

Concealed still by the smoke, Higgins reloaded, mounted his horse, and turned to fly, when a voice, apparently from the grass, hailed with: "Tom, you won't leave me, will you?" He turned immediately around, and seeing a fellow-soldier, by the name of Burgess, lying on the ground wounded, and gasping for breath, replied: "No, I'll not leave you—come along." "I can't come," said Burgess; "my leg is all smashed to pieces." Higgins dismounted, and taking up his friend, whose ankle had been broken, was about to lift him on his horse, when the animal taking fright, darted off in an instant, and left them both behind. "This is too bad," said Higgins; "but don't fear; you hop off on your three legs, and I'll stay behind between you and the Indians, and keep them off. Get into the tallest grass, and crawl as near the ground as possible." Burgess did so, and escaped.

The smoke, which had hitherto concealed Higgins, now cleared away, and he resolved, if possible to retreat. To follow the track of Burgess was most expedient. It would, however, endanger his friend. He determined, therefore, to venture boldly forward, and, if discovered to secure his own safety by the rapidity of his flight. On leaving a small thicket in which he had sought refuge, he discovered a tall, portly savage near by, and two others in a direction between him and the fort. He paused for a moment, and thought if he could separate and fight them singly, his case was not so desperate. He started, therefore, for a little rivulet near, but found one of his limbs failing him—it having been struck by a ball in the first encounter, of which, till now, he was scarcely conscious. The largest Indian pressed close upon him, and Higgins turned round two or three times in order to fire. The Indian halted and danced about to prevent his taking aim. He saw it was unsafe to fire at random, and perceiving two others approaching, knew he must be overpowered in a moment, unless he could dispose of the forward Indian first. He resolved, therefore, to halt and receive his fire. The Indian raised his rifle, and Higgins, watching his eye, turned suddenly as his finger pressed the trigger, and received the ball in his thigh. He fell, but rose immediately and ran. The foremost Indian, now certain of his prey, loaded again and with the other two pressed on. They overtook him—he fell again, and as he rose the whole three fired, and he received all their balls. He now fell and rose a third time, and the Indians, throwing away their guns, advanced upon him with spears and knives. As he presented his gun at one or the other, each fell back. At last, the largest Indian, supposing his gun to be empty from his fire having been thus reserved, advanced boldly to the charge. Higgins fired and the savage fell.

He had now four bullets in his body—an empty gun in his hand—two Indians unharmed, as yet, before him—and a whole

tribe but a few yards distant. Any other man would have despaired. Not so with him. He had slain the most dangerous of the three, and having little to fear from the others, began to load his rifle. They raised a savage whoop and rushed to the encounter. A bloody conflict now ensued. The Indians stabbed him in several places. Their spears, however, were but thin poles, hastily prepared, and bent whenever they struck a rib or a muscle. The wounds they made were not, therefore, deep, though numerous.

At last one of them threw his tomahawk. It struck him upon the cheek, severed his ear, laid bare his skull to the back of his head, and stretched him upon the prairie. The Indians again rushed on, but Higgins, recovering his self-possession, kept them off with his feet and hands. Grasping, at length, one of their spears, the Indian, in attempting to pull it from him, raised Higgins up; who, taking his rifle, dashed out the brains of the nearest savage. In doing so, however, it broke—the barrel only remaining in his hand. The other Indian, who had heretofore fought with caution, came now manfully into the battle. His character as a warrior was in jeopardy. To have fled from a man thus wounded and disarmed, or to have suffered his victim to escape, would have tarnished his fame forever. Uttering, therefore, a terrific yell, he rushed on and attempted to stab the exhausted ranger; but the latter warded off his blow with one hand and brandished his rifle-barrel with the other. The Indian was, as yet, unharmed, and under existing circumstances, by far the most powerful man. Higgins' courage, however, was unexhausted and inexhaustible. The savage, at last, began to retreat from the glare of his untamed eye, to the spot where he dropped his rifle. Higgins knew that if he recovered that, his own case was desperate; throwing, therefore, his rifle-barrel aside and drawing his hunting-knife, he rushed upon his foe. A desperate strife ensued—deep gashes were inflicted on both sides. Higgins, fatigued and exhausted by the loss of blood, was no longer a match for the savage. The latter succeeded in throwing his adversary from him, and went immediately in pursuit of his rifle. Higgins, at the same time, rose and sought for the gun of the other Indian. Both, therefore, bleeding and out of breath, were in search of arms to renew the combat.

The smoke had now passed away, and a large number of Indians were in view. Nothing, it would seem, could now save the gallant ranger. There was, however, an eye to pity and an arm to save—and that arm was a woman's! The little garrison had witnessed the whole combat. It consisted of but six men and one woman; that woman, however, was a host—a Mrs. Pursley. When she saw Higgins contending, single-handed, with a whole tribe of savages, she urged the rangers to attempt his rescue. The rangers objected, as the Indians were ten to one. Mrs. Pursley, therefore, snatched a rifle from her husband's hand, and declaring that "so fine a fellow as Tom Higgins should not be lost for want of help," mounted a horse, and sallied forth to his rescue. The

men, unwilling to be outdone by a woman, followed at full gallop—reached the spot where Higgins fainted and fell, before the Indians came up, and while the savage, with whom he had been engaged, was looking for his rifle, his friends lifted the wounded ranger up, and throwing him across a horse before one of the party, reached the fort in safety.

Higgins was insensible for several days, and his life was preserved by continual care. His friends extracted two of the balls from his thigh; two however yet remained—one of which gave him a good deal of pain. Hearing, afterward, that a physician had settled within a day's ride of him, he determined to go and see him. The physician asked him fifty dollars for the operation. This Higgins flatly refused, saying it was more than a half year's pension. On reaching home, he found the exercise of riding had made the ball discernible; he requested his wife, therefore, to hand him his razor. With her assistance he laid open his thigh, until the edge of the razor touched the bullet; then inserting his two thumbs into the gash, "he flirited it out," as he used to say, "without costing him a cent." The other ball yet remained; it gave him, however, but little pain, and he carried it with him to his grave. Higgins died in Fayette County, Illinois, a few years since. He was the most perfect specimen of a frontier man in his day, and was once assistant doorkeeper of the House of Representatives, in Illinois. The facts, above stated, are familiar to many, to whom Higgins was personally known, and there is no doubt of their correctness.

WILD BILL, OR THE MISSISSIPPI ORSON.

WILD BILL, or the Mississippi Orson, as he has been called, was secured about the year 1809, in the Mississippi Swamp, not far from the site of Pinckneyville. The circumstances that led to his being taken were these. Some persons, who had recently settled in the vicinity, saw on the margins of the swamps the prints of the bare foot of a young person, and on close examination, they soon discovered a naked boy walking with the gait and in the manner of a wild animal on the shore of one of the lakes that abound in that region. His object was to catch frogs, a species of hunting at which he seemed very expert. When he had caught them, he devoured them raw. The discoverer attempted to approach him, but so soon as the wild lad saw him he fled, with the usual terror of an untamed creature at the sight of man, toward a lake, into which he plunged, diving and swimming with the ease of an amphibious animal.

These occurrences naturally excited much interest among the settlers; and they collected in a body to make a united effort to take him. After hunting for him for some time, they at length discovered him under a persimmon tree, eating the fruit. As soon

as he observed his pursuers, he fled as before, doubling like a fox, and making again for the water. Excusing themselves by their motive, the hunters adopted their usual expedient for catching animals. They put their dogs on the trail of the strange game. They soon tired him down and brought him to bay. Though no metaphysicians to form mental theorems out of the case of their new conquest, they discovered that the two-legged unfeathered creature had the natural instinct of *fight*—for he had made battle upon dogs and men with the full amount of courage and ferocity that might be expected from his age and physical strength. But, although he fought like any other animal, he was compelled to yield to numbers, and was fairly caught and bound.

He was then, it is supposed, not far from nine years old, naked, and perfectly speechless. His form was slender, but well-proportioned, and capable of extreme agility. His eyes were brilliant, his hair sandy, and his complexion florid; a circumstance which may be accounted for, by his having lived almost entirely in the deep shades of the forest. Woodville was the nearest considerable settlement, and thither he was carried and placed in the family of Mr. Benjamin Rollins for domestication.

In two years after his capture, he has made some progress in learning to converse; he was also quite intelligible, although he had a *wild* look, perfectly indicative of his name. It was more difficult to overcome his appetite for raw flesh than to learn him to speak. The love of the excitement of alcohol seems to be another common appetite of the man of nature, for he soon manifested an unconquerable longing for spirits in any form, especially when rendered sweet—upon which he became intoxicated whenever he had an opportunity. Whether he discovered the usual developments of the other animal propensities we do not know; but he always remained a wild animal in the fierceness of his temper. When playing with lads of his age, the moment his passions were aroused in any way, his first movement was to strike them with whatever instrument was nearest at hand. After his partial domestication they attempted to put him at work; but he showed a truly savage disrelish for labor. He was sure to run away, generally making for the town, where his amusement was to mount on horseback, whenever he was allowed the opportunity. Riding was his passion, and he would successively mount every horse in the livery stable for the pleasure of riding him to water. In other respects, he was quick and intelligent, and his appearance rather agreeable and prepossessing.

The training which he received was either unfavorable to a good mental development, or it had originally been denied him by nature; for he became quarrelsome, addicted to drunkenness, and not at all a lover of the truth. Consequently a good deal of doubt and uncertainty must rest upon his account of his early recollections, though they were so often repeated, and so nearly in the same form, as to have gained credence with the people among whom

he lived. He stated that he had a dim remembrance of coming down the Mississippi with his father's family in a flatboat—that the boat landed—that his father killed his mother—and that he fled in terror into the swamps, expecting that his father would kill him also; and that from that time he had subsisted on frogs, animals, and berries—living in warm weather among the cane, and in cold weather, in a hollow tree.

It is extremely unfortunate that so few details of the character and domestication of Wild Bill remain. He died, it is believed, at the age of eighteen or nineteen; that is near the year 1818, after a domestication of about nine years.

THE FANATICAL PILGRIMS.

THE principles of religious fanaticism ever appear similar in their manifestations; the same intolerant bigotry, the same superabundant zeal, the greater in proportion to the ignorance of the subjects, and the same arrogant assumptions have always been exhibited in the history of fanaticism. With the character of the Mormon delusion, the public are familiar. Not so with, perhaps, a more singular class of enthusiasts, known by the name of "the Pilgrims," who emigrated from the North to the Valley of the Mississippi, about the year 1817. A gentleman who resided a few years later as a missionary on the Arkansas at the Post, about fifty miles from its mouth, met in that vicinity with the wretched remains of that singular class of enthusiasts, dwindled down by sickness and misfortune to only six persons, the "prophet" and his family. They were sick and living in poverty; and the *rags* with which they were originally habited, to excite attention and to be *in keeping* with their name and assumption, were then retained from necessity. From the wife of the prophet and other sources, he gleaned the information which follows, of their origin, progress, and end.

It seems that the fermenting principles of the society began to operate in Lower Canada. A few religious people began to talk about the deadness and unworthiness of all churches as bodies, and they were anxious to separate from them in order to form a more perfect society. The enthusiasm caught in other minds, like a spark fallen in flax. A number immediately sold everything and prepared to commence a course toward the Southwest. In their progress through Vermont, they came in contact with other minds affected with the same longing with themselves, and doubtless most of them perfectly honest. The "prophet," a compound of hypocrite and enthusiast, joined himself to them, and from his superior talents or contributions to the common stock of the society, became their leader.

They went on accumulating through New York; when their

numbers amounted to nearly fifty. There they encountered the Shakers, and as they had some notions in common, a kind of coalition was attempted with them. But the Shakers are neat and industrious, to a proverb; but industry made little part of the religion of the Pilgrims, and neatness still less; for it was a maxim with them to wear their clothes as long as they would last on the body, without washing or changing; and the more patched or particolored the better. If they wore one whole shoe, the other—like the pretended pilgrim of old time—was clouted and patched. They made it a point, in short, to be as ragged and dirty as might be.

Of course, after a long debate with the Shakers—in which they insisted upon industry, cleanliness, and parting from their wives, proving abundantly and quoting profusely, that it ought to be so; and the Pilgrims proving by more numerous and opposite quotations, that they ought to cleave to their dirt, rags, laziness, and wives, and that they ought to go due southwest to find the New Jerusalem—it terminated as most religious disputes do; each party claimed the victory, and lamented the obduracy, blindness, and certain tendency to everlasting destruction of the other; and they probably parted with these expectations of the other's doom.

I knew nothing of their course from that place to New Madrid, below the mouth of the Ohio. They were then organized to a considerable degree, and had probably eight or ten thousand dollars in common stock. The prophet was their ruler, spiritual and temporal. He had visions by night, which were expounded in the morning, and determined whether they should stand still or go on; whether they should advance by land or water; in short, everything was settled by immediate inspiration. Arrived at New Madrid, they walked ashore in Indian file; the old men in front, then the women and children in the rear. They chanted a kind of tune, as they walked, the burden of which was, "*Praise God! Praise God!*"

Their food was mush and milk, prepared in a trough, and they sucked it up, standing up, through a perforated stalk of corn. They enjoined severe penances according to the state of grace in which the penitent was. For the lower stages, the penance was very severe, as to stand for four successive days without reclining or sitting; to fast one or two days. In fact, fasting was a primary object of penance, both as severe in itself and as economical. They affected to be ragged, and to have different stripes in their dresses and caps, like those adopted in penitentiaries as badges in the character of the convicts.

So formidable a band of ragged Pilgrims, marching in perfect order, chanting with a peculiar twang, the short phrase, "*Praise God! Praise God!*" had in it something imposing to a people like those of the West, strongly governed by feelings and impressions. Sensible people assured me that the coming of a band of these Pilgrims into their houses, affected them with a thrill of

alarm which they could hardly express. The untasted food before them, lost its savor, while they heard these strange people call upon them, standing themselves in the posture of statues, and uttering only the words, "Praise God! repent! fast! pray!" Small children, waggish and profane as most of the children are, were seen to shed tears, and ask their parents if it would not be fasting enough to leave off one meal a day.

Two of their most distinguished members escaped from them at New Madrid, not without great difficulty, and having been both of them, confined to prevent their escape. One of them, an amiable and accomplished woman, whose over-wrought imagination had been carried away by their imposing rites, died soon after, worn down by the austerities and privations which she had endured. The husband had an emaciated look, like the Shakers, a sweet voice for music, and was preaching in union with the Methodists. At Pilgrim Island, thirty miles below, and opposite the Little Prairie, they staid a long time.

There dissensions began to spring up among them. Emaciated with hunger and feverish from filth and the climate, many of them left their bones. They were ordered by the prophet, from some direct revelation which he received, to lie unburied; and their bones were bleaching on the island when we were there. Some escaped from them at this place, and the sheriff of the county of New Madrid, indignant at the starvation imposed as a discipline upon the little children, carried to them a pirogue of provisions, keeping off with his sword the leaders, who would have fain prevented those innocents from satiating their appetites. While on that island, a great number of boatmen are said to have joined, to take them at their profession of having no regard for the world or the things of it, and robbed them of all their money, differently stated to be from five to ten thousand dollars. From that place, reduced in number by desertion and death, in their descent to the mouth of the Arkansas, there were only the numbers surviving which I saw.

This history of the delusion and destruction of between thirty and forty people, most of them honest and sincere, left a deep and melancholy impression of the universal empire of bigotry, and its fatal influence in all ages and countries. To this narrative, I shall only add, that I heard an aged man, with a long beard, preaching, as they called it, at New Madrid. He descended the Mississippi a year after these unfortunate people, and he also called himself a Pilgrim. He was as wild and visionary as they were, and talked and acted like a maniac. He was descending the Mississippi, as he said to the *real* Jerusalem in Asia. He appeared deeply impressed that by going in that direction, he should finally reach that city. There was a numerous audience, and I heard many of them express their admiration of his preaching.

ADVENTURE OF AUDUBON.

On my return from the Upper Mississippi, I found myself obliged to cross one of the wide prairies, which in that portion of the United States vary the appearance of the country. The weather was fine; all around me was as fresh and blooming as if it had just issued from the bosom of nature. My knapsack, my gun and my dog were all I had for baggage and company. But, although well moccasined, I moved slowly along, attracted by the brilliancy of the flowers, and the gambols of the fawns around their dams, to all appearance as thoughtless of danger as I felt myself.

My march was of long duration. I saw the sun sink beneath the horizon long before I could perceive any appearance of woodland, and nothing in the shape of man had I met with that day. The track which I followed was only an Indian trace; and as darkness overshadowed the prairie, I felt some desire to reach at least a copse, in which I might lie down to rest. The nighthawks were skimming over and around me, attracted by the buzzing wings of the beetles, which form their food, and the distant howling of wolves, gave me some hope that I should soon arrive at the skirts of some woodland.

I did so; and, at almost the same instant, a fire-light attracting my eye, I moved toward it, full of confidence that it proceeded from the camp of some wandering Indians. I was mistaken. I discovered, from its glare, that it was from the hearth of a small log-cabin, and that a tall figure passed and repassed between it and me, as if busily engaged in household arrangements.

I reached the spot, and presenting myself at the door, asked the tall figure, which proved to be a woman, if I might take shelter under her roof during the night. Her voice was gruff, and her attire negligently thrown about her. She answered in the affirmative. I walked in, took a wooden stool, and quietly seated myself by the fire. The next object that attracted my notice was a finely formed young Indian, resting his head between his hands, with his elbows on his knees. A long bow rested against the log wall near him, while a quantity of arrows, and two or three raccoon skins, lay at his feet. He moved not; he apparently breathed not. Accustomed to the habits of Indians, and knowing that they pay but little attention to the movements of civilized strangers, I addressed him in French, a language not unfrequently partially known to the people in that neighborhood. He raised his head, pointed to one of his eyes with his finger, and gave me a significant glance with the other. His face was covered with blood. The fact was, that an hour before this, as he was in the act of discharging an arrow at a raccoon in the top of a tree, the arrow had split upon the cord, and sprung back with such violence into his right eye as to destroy it forever.

Feeling hungry, I inquired what sort of fare I might expect.

Such a thing as a bed was not to be seen, but many large untanned bear and buffalo hides lay piled in a corner. I drew a fine time-piece from my breast, and told the woman that it was late, and that I was fatigued. She had espied my watch, the richness of which seemed to operate upon her feeling with electric quickness. She told me that there was plenty of venison and jerked buffalo-meat, and that on removing the ashes, I should find a cake. But my watch had struck her fancy, and her curiosity had to be gratified by an immediate sight of it. I took off the gold chain that secured it from around my neck, and handed it to her. She was all ecstasy, spoke of its beauty, asked me its value, and put the chain round her brawny neck, saying how happy the possession of such a watch would make her. Thoughtless, and as I fancied myself in so retired a spot secure, I paid little attention to her talk or her movements. I helped my dog to a good supper of venison, and was not long in satisfying the demands of my own appetite. The Indian rose from his seat as if in extreme suffering. He passed and repassed me several times, and once pinched me on the side so violently, that the pain nearly brought forth an exclamation of anger. I looked at him; his eye met mine; but his look was so forbidding, that it struck a chill into the more nervous part of my system. He again seated himself, drew his butcher-knife from its greasy scabbard, examined its edge as I would do that of a razor, suspected dull, replaced it, and taking his tomahawk from his back, filled the pipe of it with tobacco, and sent me expressive glances whenever our hostess chanced to have her back toward us.

Never until that moment had my senses been awakened to the danger which I now suspected to be about me. I returned glance for glance to my companion, and rested well assured that whatever enemies I might have, he was not of their number.

I asked the woman for my watch, wound it up, and under pretense of wishing to see how the weather might probably be on the morrow, took up my gun and walked out of the cabin. I slipped a ball into each barrel, scraped the edges of my flints, renewed the priming, and returning to the hut, gave a favorable account of my observations. I took a few bear skins, made a pallet of them, and calling my faithful dog to my side, lay down with my gun close to my body, and in a few minutes, to all appearance, was fast asleep.

A short time had elapsed, when some voices were heard, and from the corners of my eyes, I saw two athletic young men making their entrance, bearing a dead stag upon a pole. They disposed of their burden, and asking for whisky, helped themselves freely to it. Observing me and the wounded Indian, they asked who I was, and why the devil that rascal (meaning the Indian, who they knew understood not a word of English) was in the house. The mother—for so she proved to be—bade them speak less loudly, made mention of my watch, and took them to a corner, where

a conversation ensued, the purport of which it required little shrewdness in me to guess. I felt that he perceived danger in my situation, as the Indian exchanged a last glance with me.

The young men had eaten and drunk themselves into such a condition, that I already looked upon them as *hors du combat*; and the frequent visits of the whisky bottle to the ugly mouth of their dam, I hoped, would soon reduce her to a like state. Judge of my astonishment, when I saw this incarnate fiend take a large carving-knife and go to the grindstone to whet its edge. I saw her pour the water on the turning machine, and watched her working away with the dangerous instrument, until the sweat covered every part of my body in despite of my determination to defend myself to the last. Her task finished, she walked to her reeling sons, and said: "There, that'll soon settle him! Boys, kill you—and then for the watch."

I turned, cocked my gun-locks silently, touched my faithful companion, and lay ready to start up and shoot the first who might attempt my life. The moment was fast approaching, and that night might have been my last in this world, had not Providence made preparations for my rescue. All was ready. The infernal hag was advancing slowly, probably contemplating the best way of dispatching me while her sons should be engaged with the Indian. I was several times on the eve of rising and shooting her on the spot—but she was not to be punished thus. The door suddenly opened and there entered two stout travelers, each with a long rifle on his shoulder. I bounced up on my feet, and making them most heartily welcome, told them how well it was for me that they should arrive at that moment. The tale was told in a minute. The drunken sons were secured, and the woman, in spite of her defense and vociferations, shared the same fate. The Indian fairly danced for joy, and gave us to understand that, as he could not sleep for pain, he would watch over us. You may suppose that we slept much less than we talked. The two strangers gave me an account of their once having been in a somewhat similar situation. Day came, fair and rosy, and with it the punishment of our captives.

They were now quite sobered. Their feet were unbound, but their arms were still securely tied. We marched them into the woods off the road, and having used them as *Regulators* were wont to use such delinquents, we set fire to the cabin, gave all the skins and implements to the young Indian warrior, and proceeded well pleased toward the settlements.

During upward of twenty-five years, when my wanderings extended to all parts of our country, this was the only time at which my life was in danger from my fellow-creatures. Indeed, so little risk do travelers run in the United States, that no one born there ever dreams of any to be encountered on the road, and I can only account for this occurrence, by supposing that the inhabitants were not Americans.

Will you believe, reader, that not many miles from the place where the adventure happened, and where, twenty years ago, no habitation belonging to civilized man was expected, large roads are now laid out, cultivation has converted the woods into fertile fields, taverns have been erected, and much of what we Americans call comfort, is to be met with. So fast does improvement proceed in our abundant and free country.

EXPLORING EXPEDITIONS OF LONG, CASS, AND SCHOOLCRAFT.

IMMEDIATELY after Florida was ceded to the United States by Spain, in 1819, an expedition was organized by the Secretary of War, John C. Calhoun, to examine the country drained by the Missouri and its branches. The party under Major Stephen C. Long, comprising many scientific and military men, during the summer of 1819, examined the Lower Missouri, and passed the winter following at Council Bluffs, eight hundred and fifty miles from its mouth. In June (1820) they proceeded to examine the valley of the Platte, and followed up its south fork to its sources in the Rocky Mountains. Here Dr. James, the botanist, ascended a mountain eight thousand five hundred feet above the ocean, named, after him, *James' Peak*. From thence they struck the headwaters of the Arkansas, and followed down it to its junction with the Mississippi. They obtained much information respecting the inhabitants, natural history, and geography of those regions, which was published, in 1823, by Dr. James.

The important fact was obtained, that the whole division of North America drained by the Missouri and the Arkansas and their tributaries, between the meridian of the mouth of the Platte and the Rocky Mountains, is almost entirely unfit for cultivation, and, therefore, uninhabitable for an agricultural people. The territory for five hundred miles east of the Rocky Mountains, extending from lat. 39 deg. to lat. 49 deg., was indeed found to be a desert of sand and stones. Later observations show the adjoining regions, for a great distance west of the Rocky Mountains, to be still more arid and sterile.

In 1820, Gov. Cass, with a corps of scientific men and soldiers, left Detroit to explore the headwaters of the Mississippi. He proceeded by the way of Sault St. Mary into Lake Superior and the St. Louis River, and reached the Mississippi at Sandy Lake, which he ascended as far as Cass Lake, but was obliged, from the low state of the water, want of supplies, and the lateness of the season, to return without ascertaining the sources of the Mississippi, which were then supposed to be in Lake Biche, about sixty miles northwest of Cass Lake. During this tour, he negotiated a treaty with the Indians of Sault St. Mary, and they ceded four miles square around the falls, including the site of the old French Fort, where,

two years later, Fort Brady, the most northern military post in the United States, was erected.

In 1823, Major Long led an expedition to explore St. Peter's or Minnesota River, and the country on the northern boundary between Red River of Hudson's Bay and Lake Superior. They left Philadelphia, and proceeding by the way of Wheeling and Chicago, reached the Mississippi at Prairie du Chien. From Fort Snelling, at the mouth of the St. Peter's, they passed to Big Stone Lake at its head, and thence to Lake Travers, and then traveled by land down Red River to Pembina, a village of Lord Selkirk's settlement. By a series of astronomical observations, they ascertained that this village was all within the boundary of the United States, except one log house. This information well pleased the inhabitants, especially when they discovered that the line so ran as to bring the buffalo hunting-ground within the limits of the republic. Finding it impracticable to travel by land along the boundary, on account of the numerous marshes and lagoons between Red River and Lake Superior, Long descended Red River to Lake Winnipeg, and returned by water, through the Lake of the Woods, Rainy Lake, Lake Superior, etc.

In 1832, another expedition under Mr. Henry R. Schoolcraft, left St. Mary's Falls on the 7th of June, and proceeding via Lake Superior and Sandy Lake, ascended the Mississippi to Cass Lake. Thence they ascended the Mississippi to its eastern source in Ossowa Lake, made a passage of six miles to Itasca Lake, its western fork, where they arrived on the 13th of July. The great mystery was now solved. Three centuries after it was discovered by the Spanish cavalier, de Soto, it was ascertained that this majestic river had its source in lat. 47 deg. 13 min. 35 sec. north, and that it ran through its entire length, wholly within the territory of the United States. On account of the circuitous course of this river near its head, its source lay off the usual route of the fur traders. This was the reason of its precise location being so long veiled in obscurity. Mr. Schoolcraft also explored Crow Wing, and the St. Croix Rivers.

LIFE AMONG THE TRAPPERS.

THE trappers of the Rocky Mountains belong to a "genus" more approximating to the primitive savage, than, perhaps, any other class of civilized men. Their lives being spent in the remote wilderness of the mountains, with no other companion than Nature herself, their habits and character assume a most singular cast of simplicity, mingled with ferocity, appearing to take their coloring from the scenes and the objects which surround them. Knowing no want, save those of Nature, their sole care is to procure sufficient food to support life, and the necessary clothing to

protect them from the vigorous climate. This, with the assistance of their trusty rifles, they are generally able to effect, but sometimes at the expense of great peril and hardship. When engaged in their avocation, the natural instinct of primitive men is ever alive to guard against danger and provide food.

Keen observers of nature, they rival the beasts of prey in discovering the haunts and habits of game, and in their skill and cunning in capturing it. Constantly exposed to perils of all kinds, they become callous to any feeling of danger, and destroy human, as well as animal life, with as little scruple, and as freely as they expose their own. Of laws, human or divine, they neither know nor care to know. Their wish is their law, and to attain it, they do not scruple as to ways and means. Firm friends and bitter enemies, with them it is "a word and blow," and the blow often first. They may have good qualities, but they are those of the animal; and people fond of giving hard names, call them revengeful, blood-thirsty, drunkards—when the wherewithal is had—gamblers, regardless of the laws of *meum* and *tuum*—in fact, "white Indians." However, there are exceptions, and we *have* met honest mountain men. Their animal qualities, nevertheless, are undeniable. Strong, active, hardy as bears, daring, expert in the use of weapons, they are just what uncivilized white men might be supposed to be in a brute state, depending upon his instinct for the support of life. The majority of the trappers and mountain hunters are French Canadians and St. Louis French Creoles.

Not a hole, or a corner of the "Far West," but has been ransacked by these hardy men. From the Mississippi to the mouth of the Colorado of the West, from the frozen regions of the North to the Gila in Mexico, the beaver trapper has set his traps in every stream. Most of this vast country, but for their daring enterprise, would be, even now, a *terra incognita* to geographers. The mountains and the streams still retain the names assigned to them by the rude hunters; and these alone, are the hardy pioneers who braved the way for the settlement of the western country.

Trappers are of two kinds—the "hired hand," and the "free trapper;" the former is hired for the hunt by the fur companies; the latter supplied with animals and traps by the company is paid a certain price for his furs and peltries. There is, also, the trapper "on his own hook;" but this class is very small. He has his own animals and traps, hunts where he chooses, and sells his peltries to whom he pleases.

On starting for a hunt, the trapper fits himself out with the necessary equipment, either from the Indian trading forts, or from some of the petty traders—*coureurs des bois*—who frequent the western country. This equipment consists usually of two or three horses or mules—one for saddle, the others for packs—and six traps, which are carried in a bag of leather, called a *trap-sack*. Ammunition, a few pounds of tobacco, dressed deer-skins for

moccasins, etc., are carried in a wallet of dressed buffalo-skin, called a possible pack. His "possibles" and "trap-sack," are generally carried on the saddle mule while hunting, the others being packed with the furs. The *costume* of the trappers is a hunting-shirt of dressed buck-skin, ornamented with long fringes; pantaloons of the same material, and decorated with porcupine quills and long fringes down the outside of the leg. A flexible felt hat and moccasins clothe his extremities. Over his left shoulder and under his right arm, hang his powder-horn and bullet-pouch, in which he carries his balls, flint, steel, and odds and ends of all kinds. Round the waist is a belt, in which is stuck a large butcher-knife in a sheath of buffalo-hide, made fast to the belt by a chain or guard of steel, which, also, supports a little buck-skin case containing a whetstone. A tomahawk is often also added; and, of course, a long heavy rifle is part and parcel of his equipment. Around his neck hangs his pipe holder, and is generally a "*gage d'amour*," and a triumph of squaw workmanship, in shape of a heart garnished with beads and porcupine quills.

Thus provided, and having determined the locality of his trapping-ground, he starts to the mountains, sometimes alone, sometimes three or four in company, as soon as the breaking up of ice allows him to commence operations. Arrived on his hunting-ground, he follows the creeks and streams, keeping a sharp lookout for "sign." If he sees a prostrate cotton-wood tree, he examines it to discover if it be the work of beaver—whether "thrown" for the purpose of food, or to dam the stream. The track of the beaver on the mud or sand under the bank, is also examined; and, if the "sign" be fresh, he sets his trap in the run of the animal, hiding it under water, and attaching it by a stout chain to a picket driven in the bank, or to a bush or tree. A "float stick" is made fast to the trap by a cord a few feet long, which, if the animal carry away the trap, floats on the water, and points out its position. The trap is baited with "medicine," an oily substance obtained from a gland in the scrotum of the beaver, but distinct from the testes. A stick is dipped into this, and planted over the trap; and the beaver, attracted by the smell, and wishing a close inspection, very foolishly puts his leg into the trap, and is a "gone beaver."

When a lodge is discovered, the trap is set at the edge of the dam, at the point where the animal passes from deep to shoal water, and always under water. Early in the morning, the hunter always mounts his mule and examines the traps. The captured animals are skinned, and the tails, which are a great dainty, carefully packed into camp. The skin is then stretched over a hoop, or frame-work of osier twigs, and is allowed to dry; the flesh and fatty substance being carefully scraped (grained). When dry, it is folded into a square sheet, the fur turned inward, and the bundle, containing about ten to twenty skins, lightly pressed and corded, is ready for transportation.

During the hunt, regardless of Indian vicinity, the fearless trapper wanders far and near in search of "sign." His nerves must ever be in a state of tension, and his mind ever present at his call. His eagle-eye sweeps around the country, and in an instant, detects any foreign appearance. A turned leaf, a blade of grass pressed down, the uneasiness of wild animals, the flight of birds, are all paragraphs to him, written in Nature's legible hand and plainest language. All the wits of the subtle savage are called into play to gain an advantage over the wily woodsman; but with the instinct of primitive man, the white hunter has the advantage of a civilized mind, and thus provided, seldom fails to outwit, under equal advantage, the cunning savage.

Sometimes following on his trail, the Indian watches him set his traps on a shrub-belted stream, and passing up the bed, like Bruce of old, so that he may leave no track, he lies in wait in the bushes until the hunter comes to examine his carefully-set traps. Then waiting until he approaches his ambush within a few feet, *whiz*, flies the home-drawn arrow, never failing at such close quarters to bring the victim to the ground. For one white scalp, however, that dangles in the smoke of an Indian lodge, a dozen black ones, at the end of the hunt, ornament the camp-fire of the rendezvous.

At a certain time, when the hunt is over, or they have loaded their pack animals, the trappers proceed to their "rendezvous," the locality of which has been previously agreed upon; and here the traders and agents of the fur companies await them with such assortment of goods as their hardy customers may require, including generally a fair supply of alcohol. The trappers drop in singly and in small bands, bringing their packs of beaver to this mountain market, not unfrequently to the value of a thousand dollars each, the produce of one hunt. The dissipation of the "rendezvous," however, soon turns the trapper's pocket inside out. The goods bought by the traders, although of the most inferior quality, are sold at enormous prices—coffee twenty and thirty shillings a pint cup, which is the usual measure; tobacco fetches ten and fifteen shillings a plug; alcohol from twenty to fifty shillings a pint; gunpowder sixteen shillings a pint cup; and all other articles at proportionably exorbitant prices.

The "beaver" is purchased at from two to eight dollars per pound; the Hudson's Bay Company alone buying it by the *pluie* or "pluew," that is, the whole skin, giving a certain price for skins, whether of old beaver or "kittens."

The rendezvous is one continued scene of drunkenness, gambling, brawling, and fighting, so long as the money and credit of the trappers last. Seated Indian fashion around the fires, with a blanket spread before them, groups are seen with their "decks" of cards playing at "eucré," "poker," and "seven up," the regular mountain games. The stakes are "beaver," which is here current coin; and when the fur is gone, their horses, mules, rifles, and

shirts, hunting packs, and breeches are staked. Daring gamblers make the rounds of the camp, challenging each other to play for the trapper's highest stake—his horse, his squaw (if he have one), and as once happened, his scalp. A trapper often squanders the produce of his hunt, amounting to hundreds of dollars, in a couple of hours; and supplied on credit with another equipment, leaves the rendezvous for another expedition, which has the same result, time after time, although one tolerably successful hunt would enable him to return to the settlements and civilized life with an ample sum to purchase and stock a farm, and enjoy himself in ease and comfort the remainder of his days.

These annual gatherings are often the scene of bloody duels, for over their cups and cards, no men are more quarrelsome than your mountaineers. Rifles, at twenty paces, settle all differences, and as may be imagined, the fall of one or other of the combatants is certain, or as sometimes happens, both fall at the word "fire!"

OGILVIE'S ADVENTURE.

MR. OGILVIE, once well known in Virginia as a supporter of the Godwenian philosophy, conceiving a vehement desire to see the western country, at that time newly settled, set off from Richmond for Lexington, in Kentucky. It was in the month of October, after a most lonely and wearisome day's ride, that a little before sunset he came to a small cabin on the road, and fearing he should find no other opportunity of procuring refreshment for himself and his jaded horse, he stopped and inquired if he could be accommodated for the night. An old woman, the only person he saw, civilly answering him in the affirmative, he gladly alighted, and going in to a tolerable fire, enjoyed the luxury of rest, while his hostess was discharging the duties of hostler and cook. In no long time she set before him a supper of comfortable but homely fare, of which having liberally partaken, and given divers significant nods, the old woman remarked, she "expected" he "chose bed," and pointing to one which stood in the corner of the room, immediately went into the yard a while to give him an opportunity of undressing.

Before he had been long in bed, and while he was congratulating himself on his good fortune, the latch of the door was drawn, and there entered a dark looking man of gigantic stature and form, with stiff black hair, eyebrows and beard. He was apparently about eight and twenty, was dressed in a hunting-shirt, which partly concealed a pair of dirty buck-skin overalls, and he wore moccasins of the same material. Mr. Ogilvie thought he had never seen anything half so ferocious. As soon as this man entered the room, his mother, for so she proved to be, pointing to the

bed, motioned him to make no noise; on which, with inaudible steps, he walked to the chimney, put up his gun on a rude rack, provided for that and other arms, and sat softly down to the fire, then throwing a bright blaze around the room.

Our traveler not liking the looks of the new comer, and not caring to be teased by conversation, drew his head under the bed-clothes, so that he could see what was passing without leaving his own face visible. The two soon entered into conversation, but in so low a voice that Mr. Ogilvie could not distinguish what was said. His powers of attention were wrought up to the most painful pitch of intensity. At length, the man looking toward the bed, made some remark to his mother, to which Mr. Ogilvie heard her reply, "No, I hardly think he's asleep yet;" and they again conversed in a low voice as before. After a short interval, while the man sat with his feet stretched out toward the fire on which he was intently gazing, he was heard to say:

"Don't you think he's asleep now?"

"Stop," says she, "I'll go and see;" and moving near the bed, under the pretext of taking something from a small table, she approached so near as to see the face of our traveler, whose eyes were, indeed, closed, but who was anything but asleep.

On her return to the fire-place she said: "Yes! he's asleep now."

On this, the mountaineer rising from his stool, reached up to the rack, and taking down with his right hand an old greasy cutlass, walked with the same noiseless step toward the traveler's bed, and stretching out the other hand, at the moment that Mr. Ogilvie was about to implore his pity, took down a venison ham, which hung on the wall near the head of the bed, walked softly back to the fire, and began to slice some pieces for his supper, and Mr. Ogilvie, who lay more dead than alive, and whose romantic fancy heightened the terrors of all he saw, had the unspeakable gratification to find that these kind hearted children of the forest had been talking low, and that the hungry hunter, who had eaten nothing since morning, had forbore making a noise, lest they should interrupt the slumbers of their way-worn guest. The next day, Mr. Ogilvie, who was an enthusiast in physiognomy, discovered remarkable benevolence in the features of the hunter, which, by the false and deceitful glare of the fire-light, had escaped him, and in his recital of this adventure, which furnished him with a favorite occasion of exercising his powers of declamation to great advantage in a matter of real life, he often declared that he had never taken a more refreshing night's rest, or made a more grateful repast than he had done in this humble cabin.

CHARACTER OF THE WESTERN PEOPLE.

THE Western man lives in a region of exuberant fertility, where Nature has scattered her blessings in unbounded profusion. The excellent laws which protect his liberties; the vastness of his country; its giant forests; its broad prairies; its mighty rivers; the rapid improvements he witnesses constantly progressing; and the bright prospects for a more glorious future in everything that renders life happy and ennoble character, in the midst of which "he lives and moves, and has his being;" all tend to deeply impress his character, to give him such a spirit of enterprise, such an independence of feeling, and such a full joyousness of hope, as is utterly unknown to the inhabitants of the older nations of the earth.

The character of the Western people, with a recital of some of the prominent causes which have given them their peculiarities, is thus given by one of their early and most popular writers.

The people of the West are as thorough a combination and mixture of all nations, characters, languages, conditions, and opinions as can well be imagined. Scarcely a nation in Europe, or a State in the Union, but has furnished us emigrants.

The much greater proportion of the emigrants from Europe are of the humbler classes, who come here from hunger, poverty and oppression. They find themselves here with the joy of the shipwrecked mariner cast on the untenanted woods, and instantly become cheered with the hope of being able to build up a family and a fortune from new elements.

The Puritan and the Planter, the German, the Briton, the Frenchman, the Irishman and the Swede, each with their peculiar prejudices and local attachments, and all the complicated and interwoven tissue of sentiments, feelings and thoughts, that country, kindred and home indelibly combine with the web of our youthful existence, have been set down beside each other. The merchant, mechanic and farmer, each with their peculiar prejudices and jealousies, have found themselves placed by necessity in the same society.

Men must cleave to their kind, and must be dependent upon each other. Pride and jealousy give way to the natural yearnings of the human heart for society. They begin to rub off mutual prejudices. One takes a step and then the other. They meet half way and embrace; and the society thus newly organized and constituted is more liberal, enlarged, unprejudiced, and, of course, more affectionate and pleasant than a society of people of like birth and character, who bring all their early prejudices as a common stock, to be transmitted as an inheritance to posterity.

The rough, sturdy and simple habits of the backwoodsman, living in that plenty which depends only upon God and Nature, and being the preponderating cast of character in the Western country, have laid the stamina of independent thought and feeling

deep in the breast of the people. A man accustomed to the fascinating but hollow intercourse of the polished circles in the Atlantic cities, at first feels a painful revulsion when mingled with this more simple race. But he soon becomes accustomed to the new order of things, and if he have a heart to admire simplicity, truth and nature, he begins to be pleased with it. He respects a people where a poor but honest man enters the most aristocratic mansion with a feeling of ease and equality.

But young as the country is, variously constituted and combined as are the elements of its population, there is already marked, and it is every year more fully developed, a distinctive character in the people. A traveler from the Atlantic cities, and used only to their manners, in descending the Ohio and the Mississippi in a steamboat of the larger class, will find on board what may be considered fair samples of all classes in our country. The manners so ascertained will strike such a traveler, as we have supposed, with as much of novelty, distinctness, and we may add, if he be not bigoted and fastidious, with as much pleasure, as though he had visited a country beyond the seas. The dialect, the pronunciation, and the peculiar and proverbial colloquy, are all different; and the figures and illustrations in common conversation strikingly so. The speaking is more rapid; the manner has more appearance of earnestness and abruptness; the common comparisons and analogies are drawn from different views and relations of things. Of course he is every moment reminded that he is a stranger among a people whose modes of existence and ways of thinking are of a widely different character from those in the midst of which he was reared.

Although we have been so often described to this traveler as a repulsive mixture, in the slang phrase, of the "horse and the alligator," we confidently hazard the opinion, that when little accustomed to the manners of the better class of people among us, he will institute a comparison between our people and his own not unfavorable to us. There is evidently more ease and frankness—more readiness to meet and wish to form an acquaintance—sufficient tact when to advance, and how far, and where to pause in this effort—less holding back, less distrust, less feeling—as if the address of a stranger were an insult or a degradation.

A series of acquaintances are readily and naturally found between fellow-passengers, in their long descents to New Orleans, very unlike the cold, constrained and almost repelling and hostile deportment of fellow-passengers in the Atlantic country.

On these voyages, where the boat glides steadily and swiftly along the verge of the fragrant willows, the green shores are always seen with the same glance that takes in the magnificent and broad expanse of the Mississippi. The passengers every day have their promenade. The claims of proscription on the score of wealth, family, office and adventitious distinctions of every sort, are laid aside, or pass for nothing. The estimation, the worth and

interest of a person are naturally tried on his simple merits, his power of conversation, his innate civility, his capacities to arouse, and his good feelings.

The distinctive character of the Western people may be traced, in its minuter shades, to a thousand different causes. Their forests and prairies concur with their inclinations and abundant leisure, to give them the spirit-stirring and adventurous habits of the chase. The early training to leave the endearments and enjoyments of home on voyages of constant exposure, and often of a length of more than five hundred leagues, will naturally tend to create a character widely unlike the more shrinking, stationary and regular habits of the people of the older country.

Thus a great proportion of the males of the western country, of a relative standing and situation in life to be most likely to impress their opinions and manners upon society, have made the voyage of the Mississippi to New Orleans. They have passed through different States with men of different nations, languages, and manners. They have experienced that expansion of mind which cannot fail to be produced by traversing long distances of country and viewing different forms of nature and society.

The Religious Character.—The experiment is being made in this vast region of future empires upon a broad scale, which will test the question whether religion, as a national trait, can be maintained without legislative aid or a union with the civil power. Men are here left free to adopt such religious views and tenets as they choose, and the laws protect every man alike in his religious opinions. Ministers of the Gospel and priests, being presumed as devoted to humanity, charity, and general benevolence, are precluded by many of the State constitutions from any active participation in the legislative authority, and their compensation depends upon the voluntary aid of those among whom they labor in charity and love. In a wide country, with large districts yet sparsely populated, there are comparatively few stationary ministers; yet there are thousands, embracing all denominations, who traverse the whole country, forming an itinerant corps who visit in rotation, within their respective bounds, every settlement, town, and village. Unsustained by the rigid precepts of law in any privileges, perquisites, fixed revenue, prescribed reverence or authority, except such as is voluntarily acknowledged, the clergy find that success depends upon the due cultivation of popular talents. Zeal for the great cause, mixed, perhaps, with a spice of earthly ambition, the innate sense of emulation and laudable pride, a desire of distinction among their contemporaries and brethren, prompt them to seek popularity and to study all the arts and means of winning the popular favor. Traveling from month to month through dark forests, with such ample time for deep thought as they amble slowly along the lonesome horse-path or unfrequented road, they naturally acquire a pensive and romantic turn of thought and expression, which is often favorable to eloquence. Hence this preaching is of

a highly popular cast, its first aim being to excite the feelings and mould them to their own; hence, too, excitements, or, in religious parlance, "awakenings" or "revivals," are common in all this region. Living remote from each other, and spending much of their time in domestic solitude in vast forests or wide-spreading prairies, the "appointment" for preaching is often looked upon as a gala-day or a pleasing change, which brings together the auditors from remote points, and gratifies a feeling of curiosity, which prompts them to associate and interchange cordial congratulations.

Religious excitements sometimes pervade a town or settlement, or even an extensive section of country, simultaneously. People in every direction are fired with a desire to be present at the appointed time and place of meeting. They assemble as to an imposing spectacle; they pour in from their woods and remote seclusions to witness the assemblage and to hear the new preacher, whose eloquence and fame have preceded him. The preaching has a scenic effect; it is a theme of earnest discussion, with apt illustrations, forcible arguments, and undaunted zeal. The people are naturally more sensitive and enthusiastic than in older countries. A man of rude, boisterous, but native eloquence rises among these children of the forest and of simple nature, with his voice pitched to the highest tones, and his utterance thrilling with that awful theme to which each string of the human heart responds, and while the woods echo his vehement declamations, his audience is alternately dissolved in tears, awed to profound ecstasy of feeling, or falling convulsed by spasms, attests the power of western pulpit eloquence.

In no instance are these effects more striking than at a regular "camp-meeting." No one, who has not seen and observed for himself, can imagine how profoundly the preachers have understood what produces effect among the western people, and how well they have practiced upon it. Suppose the scene to be in one of those regions where religious excitements have been frequent and extensive, in one of the beautiful, fertile, and finely-watered valleys of Tennessee, surrounded by grand and towering mountains. The notice has been circulated for several weeks or months, and all are eager to attend the long-expected occasion. The country, perhaps for fifty miles around, is excited with the cheerful anticipation of the approaching festival of religious feeling and social friendship. On the appointed day, coaches, chaises, wagons, carts, people on horseback and on foot, in multitudes, with provision-wagons, tents, mattresses, household implements, and cooking utensils, are seen hurrying from every direction toward the central point. It is in the midst of a grove of beautiful, lofty, umbrageous trees, natural to the western country, clothed in their deepest verdure, and near some sparkling stream or gushing fountain, which supplies the host with wholesome water for man and beast. The encampment spreads through the forest, over hundreds of acres, and soon the sylvan village springs up as if by magic; the

line of tents and booths is pitched in a semicircle or in a four-sided parallelogram, inclosing an area of two acres or more, for the arrangement of seats and isles around the rude pulpit and altar for the thronging multitude, all eager to hear the heavenly message.

Toward night, the hour of solemn service approaches, when the vast sylvan bower of the deep umbrageous forest is illumined by numerous lamps suspended around the line of tents which encircles the public area, beside the frequent altars distributed over the same, which send forth a glare of light from their fagot fires upon the worshiping throng and the majestic forest with an imposing effect, which elevates the soul to fit converse with its creator, God.

“The scenery of the most brilliant theater in the world is only a painting for children compared to this. Meantime, the multitudes, with the highest excitement of social feeling, added to the general enthusiasm of expectation, pass from tent to tent, and interchange apostolic greetings and embraces, and talk of the approaching solemnities. A few minutes suffice to finish the evening repast, when the moon (for they take thought to appoint the meeting at the proper time of the moon) begins to show its disc above the dark summits of the mountains, and a few stars are seen glimmering in the west, and the service begins. The whole constitutes a temple worthy of the grandeur of God. An old man in a dress of the quaintest simplicity ascends a platform, wipes the dust from his spectacles, and, in a voice of suppressed emotion, gives out the hymn, of which the whole assembled multitude can recite the words, to be sung with an air in which every voice can join. We should esteem meanly the heart that would not thrill as the song is heard, ‘like the sound of many waters,’ echoing among the hills and mountains.” The service proceeds. “The hoary orator talks of God, of eternity, of a judgment to come, and of all that is impressive beyond. He speaks of his ‘experiences,’ his toils, and his travels, his persecutions and his welcomes, and how many he has seen in hope, in peace, and triumph gathered to their fathers; and when he speaks of the short space that remains to him, his only regret is that he can no more proclaim, in the silence of death, the unsearchable riches and mercies of his crucified Redeemer.”

“No wonder, as the speaker pauses to dash the gathering moisture from his own eye, that his audience is dissolved in tears, or uttering exclamations of penitence. Nor is it cause for admiration, that many who prided themselves on an estimation of a higher intellect and a nobler insensibility than the crowd, catch the infectious feeling, and become women and children in their turn, while others, ‘who came to mock, remain to pray.’”

And who constitute the audience, and who are the speakers? “A host of preachers of different denominations are there, some in the earnest vigor and aspiring desires of youth, waiting an opportunity for display; others are there who have proclaimed the Gospel as pilgrims of the cross, from the remotest lakes of Canada on the north, to the shores of the Mexican Gulf on the south, and

who are ready to utter the words, the feelings, and experience which they have treasured up in a traveling ministry of fifty years, and whose accents, trembling with age, still more impressively than their words, announce that they will soon travel and preach no more on earth."

But the ambitious and the wealthy, too, are there; for in this region opinion is all-powerful. They are there, either to extend their influence, or, lest even their absence might prejudice their good name. Aspirants for office are there, to electioneer and to gain popularity. Vast numbers are there from simple curiosity, and merely to enjoy the spectacle. The young and beautiful are there, with mixed motives, which it were best not to scrutinize severely. Children are there, and their young eyes glisten with intense interest of eager curiosity. The middle-aged fathers and mothers are there, with the sober view of people whose plans of life are fixed, and who wait calmly to hear. Men and women of hoary hairs are there, with such thoughts, it may be hoped, as their years invite. Such is the congregation, consisting of thousands.

FASCINATING LIFE OF THE MOUNTAIN HUNTER.

A TRAVELER who spent a winter among the wild scenes, and still wilder characters of the Rocky Mountains, has given the following vivid description of the fascinating life of the mountain hunter.

When I turned my horse's head from Pike's Peak, I quite regretted the abandonment of my mountain life, solitary as it was, and more than once thought of again taking the trail to the Salado valley, where I enjoyed such good sport. Apart from the feeling of loneliness, which any one in my situation must naturally have experienced, surrounded by stupendous works of nature, which in all their solitary grandeur frowned upon me, and sinking into utter insignificance, the miserable mortal who crept beneath their shadow; still there was something inexpressibly exhilarating in the sensation of positive freedom from all worldly care, and a consequent expansion of the sinews, as it were, of mind and body, which made me feel elastic as a ball of India rubber, and in such a state of perfect ease, that no more dread of scalping Indians entered my mind, than if I had been sitting in Broadway, in one of the windows of the Astor House. A citizen of the world, I never found any difficulty in investing my resting-place, wherever it might be, with the attributes of a home; and hailed with delight, equal to that which the artificial comforts of a civilized home would have caused, the, to me, domestic appearance of my hopped animals as they grazed around the camp, when I returned from a hard day's hunt.

Although liable to an accusation of barbarism, I must confess

that the very happiest moments of my life have been spent in the wilderness of the Far West; and I never recall but with pleasure, the remembrance of my solitary camp in the Bayou Salado, with no friend near me more faithful than my rifle, and no companions more sociable than my horse and mules, or the attendant coyote (prairie wolf), which nightly serenaded me. With a plentiful supply of dry pine logs on the fire, and its cheerful blaze streaming far up into the sky, illuminating the valley far and near, and exhibiting the animals, with well filled bellies, standing contentedly over their picket-pins, I would sit cross-legged enjoying the genial warmth, and pipe in mouth, watch the blue smoke as it curled upward, building castles in its vapory wreaths and in the fantastic shapes it ascended. Scarcely did I ever wish to change such hours of freedom for all the luxuries of civilized life, and unnatural and extraordinary as it may appear, yet such are the fascinations of the life of the mountain hunter, that I believe that not one instance could be adduced of even the most polished and civilized of men, who had once tasted the sweets of its attendant liberty and freedom from every worldly care, not regretting the moment when he exchanged the monotonous life of the settlements, nor sighing and sighing again, once more to partake of its pleasures and allurements.

A hunter's-camp in the Rocky Mountains, is quite a picture. It is invariably made in a picturesque locality, for, like the Indian, the white hunter has ever an eye to the beautiful. Nothing can be more social and cheering than the welcome blaze of the camp-fire on a cold winter's night, and nothing more amusing or entertaining, if not instructive, than the rough conversation of the simple-minded mountaineers, whose nearly daily task is all of exciting adventure, since their whole existence is spent in scenes of peril and privation; and consequently the narration of their every-day life is a tale of thrilling accidents and hair-breadth escapes, which, though simple matter of fact to them, appear a startling romance to those unacquainted with the nature of the lives led by those men, who, with the sky for a roof, and their rifles to supply them with food and clothing, call no man lord or master, and are as free as the game they follow.

ADVENTURE OF A TRAPPER.

THE grizzly bear is the fiercest animal of the Rocky Mountains. His great strength and wonderful tenacity of life, renders an encounter with him so full of danger, that both the Indian and white hunters never attack him unless backed by a strong party. Although like every other wild animal, he usually flees from man, yet at certain seasons, when maddened by either love or hunger, he not unfrequently charges at first sight of a foe, when, unless

killed, a hug at close quarters is anything but a pleasant embrace, his strong hooked claws stripping the flesh from the bones as easily as a cook peels onions. They attain a weight of near a thousand pounds, and not unfrequently their bodies are eight and ten feet in length. So gigantic is their strength, that they will carry off the body of a buffalo to a considerable distance. Many are the tales of bloody encounters with these animals, which the trappers delight to relate, to illustrate the fool-hardiness of ever attacking the grizzly bear.

Some years ago, a trapping party were on their way to the mountains, led, we believe, by old Sublette, a well known captain of the West. Among the band, was John Glass, a trapper who had been all his life among the mountains, and had seen, probably, more exciting adventures, and had had more wonderful and hair-breadth escapes than any of the rough and hardy fellows who make the Far West their home, and whose lives are spent in a succession of perils and privations. On one of the streams running from the "Black Hills, a range of mountains northward of the Platte, Glass and a companion were, one day, setting their traps, when on passing through a cherry thicket, which skirted the stream, the former who was in advance, descried a large grizzly bear quietly turning up the turf with his nose, searching for pig-nuts. Glass immediately called his companion, and both proceeding cautiously, crept to the skirt of the thicket, and taking steady aim at the animal, discharged their rifles at the same instant, both balls taking effect, but not inflicting a mortal wound. The bear giving a groan of agony, jumped with all four legs from the ground, and charged at once upon his enemy, snorting with pain and fury.

"Hurra, Bill," roared out Glass, as he saw the animal rushing toward them, "we'll be made 'meat' of, sure as shootin'!" He then bolted through the thicket, followed closely by his companion. The brush was so thick that they could scarcely make their way through, while the weight and strength of the bear carried him through all obstructions, and he was soon close upon them.

About a hundred yards from the thicket was a steep bluff; Glass shouted to his companion to make to this bluff as the only chance. They flew across the intervening open and level space like lightning. When nearly across, Glass tipped over a stone and fell, and just as he rose, the bear rising on his hind feet, confronted him. As he closed, Glass, never losing his presence of mind, cried to his companion to close up quickly, and discharged his pistol full into the body of the animal, at the same moment that the bear, with blood streaming from his nose and mouth, knocked the pistol from his hand with one blow of his paw, and fixing his claws deep into his flesh, rolled with him to the ground. The hunter, notwithstanding his hopeless situation, struggled manfully, drawing his knife, and plunging it several times into the body of the beast, which, ferocious with pain, tore with tooth and claw, the body

of the wretched victim, actually baring the ribs of flesh and exposing the very bones. Weak from loss of blood, and blinded with blood which streamed from his lacerated scalp, the knife at length fell from his hand, and Glass sank down insensible and apparently dead.

His companion, who, up to this moment, had watched the conflict, which, however, lasted but a few seconds, thinking that his turn would come next, and not having even presence of mind to load his rifle, fled back to the camp and narrated the miserable fate of poor Glass. The captain of the band of trappers, however, dispatched the man with a companion, back to the spot. On reaching the place, which was red with blood, they found Glass still breathing, and the bear dead and stiff, actually lying upon his body. Poor Glass presented a horrid spectacle; the flesh was torn in strips from his bones and limbs, and large flaps strewed the ground; his scalp hung bleeding over his face, which was also lacerated in a shocking manner. The bear, beside the three bullets in his body, bore the marks of about twenty gaping wounds in the breast and belly, testifying to the desperate defense of the mountaineer. Imagining that if not already dead, the poor fellow could not possibly survive more than a few moments, the men collected his arms, stripped him of even his hunting-shirt and moccasins, and merely pulling the dead bear off from the body, they returned to their party, reporting that Glass was dead, and that they had buried him. In a few days, the gloom which pervaded the trappers' camp at his loss, disappeared, and the incident, although frequently mentioned over the camp-fire, at length was almost entirely forgotten in the excitement of the hunt and the Indian perils which surrounded them.

Months elapsed, the hunt was over, and the party of trappers were on their way to the trading fort with their packs of beaver. It was nearly sundown, and the round adobe bastions of the mud-built fort were just in sight, when a horseman was seen slowly approaching them along the banks of the river. When near enough to discern his figure, they saw a lank, cadaverous form, with a face so scarred and disfigured that scarcely a feature was discernible. Approaching the leading horsemen, one of whom happened to be the companion of the defunct Glass in his memorable bear scrape, the stranger in a hollow voice, reining in his horse before them, exclaimed:

"Hurra, Bill, my boy! you thought I was 'gone under' that time, did you? but hand me over my horse and gun, my lad; I ain't dead yet, by a long shot!" What was the astonishment of the whole party, and the genuine horror of Bill and his worthy companion in the burial story, to hear the well-known but now altered voice of John Glass, who had been killed by a grizzly bear months before, and comfortably interred, as the two men had reported and all had believed!

There he was, however, and no mistake; and all crowded around

to hear from his lips how, after the lapse of, he knew not how long, he gradually recovered, and being without arms or even a butcher-knife, he had fed upon the almost putrid carcass of the bear for several days, until he had regained sufficient strength to crawl, when tearing off as much of the bear's meat as he could carry in his enfeebled state, he crept down the river; and suffering excessive torture from his wounds, and hunger and cold, he made the best of his way to the fort, which was some eighty or ninety miles distant, and living mainly upon roots and berries, he, after many, many days, arrived in a pitiable state, from which he had now recovered, and was, to use his own expression, "as slick as a peeled onion."

THE COMMERCE OF THE PRAIRIES.

THE overland trade between the United States and Santa Fe, grew out of accidental circumstances. In 1805, James Pursely crossed the desert plains of the West to Santa Fe, being the first American who ever passed over the western plains into the Spanish provinces. The year previous, however, Morrison, a merchant of Kaskaskia, in consequence of information obtained from the trappers through the Indians, relative to the isolated province of Santa Fe, dispatched Le Lande, a French Creole, with a quantity of goods up Platte River, with directions to push his way into Santa Fe, if practicable. He was successful in the enterprise; but instead of returning to account to his employer for the proceeds of the adventure, appropriated the funds to setting up business in Santa Fe on his own account, where he remained until his death, some twenty years after, having in the meantime married, grown rich, and become one of the nabobs of the place.

The Santa Fe trade attracted but little notice until Capt. Pike returned from his expedition made in 1806 and 1807. His exciting descriptions of the new El Dorado, spread like wild fire through the West. In 1812, an expedition was fitted out under the auspices of M'Knight, Beard, Chambers, and eight or ten others, who succeeded in crossing the dreary western wilds in safety to Santa Fe. But the royalists having gained the ascendancy, the injurious restrictions which had formerly rendered all foreign intercourse, except by permission of the Spanish Government illegal, being again in force, these unfortunate traders immediately on their arrival, were seized and carried to Chihuahua, and imprisoned there until 1821, when the republicans again obtaining the ascendancy, they were released. The glowing reports which they circulated upon their return, induced others to launch into the same field of enterprise; and the same year, Glenn, an Indian trader, near the mouth of Verdigris River, and Captain Becknell, a Missourian, with small parties, went to Santa Fe and made profitable expeditions.

Up to this date, New Mexico had derived all her supplies from the interior of Mexico by the way of Santa Cruz, but at such exorbitant prices, that common cotton-cloth sold as high as two and three dollars per yard.

In his next expedition, Captain Becknell, in his anxiety to avoid the circuitous route by the Upper Arkansas which he had first taken, attempted a more direct course across the pathless desert, with but little suspicion of the terrible trials which awaited them on the arid plains. They were soon unable to procure any water; and after two days' march, the sufferings of both men and beasts had driven them almost to distraction. Frantic with despair, with a horrible death staring them in the face, they scattered about the country in the vain search for water, and like the travelers in the great deserts of the East, often led astray by the deceptive glimmer of the mirage or false ponds. Unknown to them, they were near the banks of the Cimarron, but would, notwithstanding, have perished, had they not providentially met with and killed a buffalo fresh from the river's side, whose stomach was distended with water.

The success of Becknell and Glenn soon induced numerous other expeditions, and it is from this period (1822) that the virtual commencement of the Santa Fe trade may be dated. In 1824, a company of eighty Missouri traders first introduced wagons in these expeditions. The town of Franklin was originally the place of outfit for the expeditions, but eventually Independence, on the western border of Missouri, became the prominent point of embarkation for every part of the great Western and Northern "prairie ocean," though Van Buren, in Arkansas, has some advantage as a starting point for New Mexico.

Among the concourse at this starting point, pale-faced invalids were frequently met with, who joined the caravans for the sake of health. Most chronic diseases, particularly liver complaints, dyspepsias, and similar affections, are often radically cured by a tour on the prairies, owing no doubt to the peculiarities of diet, regular exercise, and the purity of the atmosphere.

The caravans did not organize until they reached Council Grove, a beautifully wooded locality, five hundred and twenty-five miles from Santa Fe, and one hundred and fifty miles in advance of Independence. This is the most northern limit of the wanderings of the Camanches.

It derived its name from the practice among the traders of assembling there for the appointment of officers, and the establishment of rules and regulations to govern their march through the dangerous country south of it. They first elected a commander-in-chief. His duty was to appoint subordinate leaders, and to divide the owners and men into watches, and to assign them their several hours of duty in guarding the camp during the remainder of their perilous journey. He also divided the caravan into two parts, each of which formed a column when on march. In these

lines, he assigned each team the place in which it must always be found. Having arranged these several matters, the council broke up; and the commander, with the guard on duty, moved off in advance to select the track, and anticipate approaching danger. After this guard, the head teams of each column led off about thirty feet apart, and the others followed in regular lines; rising and dipping gloriously; with frequently as many as two hundred men, one hundred wagons, with near half a million in goods; eight hundred mules and oxen. Shoutings and whippings, and whistlings and cheerings, were all there; and amidst them all, the hardy Yankees moved happily onward.

Several objects were gained by this arrangement of the wagons. If they were attacked on the march by the Camanche cavalry, or other foes, the leading teams filed to the right and left, and closed the front; and the hindermost, by a similar movement, closed the rear; and thus they formed an oblong rampart of wagons laden with cotton-goods, that effectually shielded teams and men from the small arms of the Indians. The same arrangement was made when they halted at night.

Within the area thus formed were put, after they were fed, many of the most valuable horses and oxen. The remainder of the animals were "staked;" that is, tied to stakes, at the distance of twenty or thirty yards around the line. The ropes by which they were fastened, were from thirty to forty feet in length; and the stakes to which they were attached, were carefully driven to such distances apart as prevented their being entangled one with another.

Among these animals the guard on duty was stationed, standing motionless near them, or crouching so as to discover every moving spot upon the horizon of night. The reasons assigned for this were, that a guard in motion would be discovered and fired upon by the cautious savage before his presence could be known; and farther, that it was impossible to discern the approach of an Indian creeping among the grass in the dark, unless the eye of the observer be so close to the ground as to bring the whole surface lying within the range of vision between it and the line of light around the lower edge of the horizon.

If the camp was attacked, the guard fired and retreated to the wagons. The whole body then took positions for defense; at one time sallying out to rescue their animals from the grasp of the Indians, and at another concealed behind their wagons, loading and firing upon their intruders with all possible skill and rapidity.

At an early day, when the Santa Fe traders traveled in small parties, they were frequently attacked by the wild prairie Indians. A terrible calamity befell a small party of American traders, in the winter of 1832-3, on their way home from Santa Fe. The party consisted of twelve men, chiefly citizens of Missouri. Their baggage and about ten thousand dollars in specie were packed upon mules. They took the route of the Canadian River, fearing

to venture on the northern prairies at that season of the year. Having left Santa Fe in December, they had proceeded without accident thus far, when a large body of Camanches and Kiawas were seen advancing toward them. Being well acquainted with the treacherous and pusillanimous disposition of those races, the traders prepared at once for defense; but the savages having made a halt at some distance, began to approach one by one, or in small parties, making a great show of friendship all the while, until most of them had collected on the spot. Finding themselves surrounded in every direction, the travelers now began to move on, in hopes of getting rid of the intruders; but the latter were equally ready for the start; and mounting their horses, kept jogging on in the same direction. The first act of hostility perpetrated by the Indians proved fatal to one of the American traders named Pratt, who was shot dead while attempting to secure two mules which had become separated from the rest. Upon this, the companions of the slain man immediately dismounted and commenced a fire upon the Indians, which was warmly returned, whereby another man of the name of Mitchell was killed.

By this time the traders had taken off their packs and piled them around for protection; and now falling to work with their hands, they very soon scratched out a trench deep enough to protect them from the shot of the enemy. The latter made several desperate charges, but they seemed too careful of their own personal safety, notwithstanding the enormous superiority of their numbers, to venture too near the rifles of the Americans. In a few hours all the animals of the traders were either killed or wounded, but no personal damage was done to the remaining ten men, with the exception of a wound in the thigh received by one, which was not at the time considered dangerous.

During the siege, the Americans were in great danger of perishing from thirst, as the Indians had complete command of all the water within reach. Starvation was not so much to be dreaded; because, in cases of necessity, they could live on the flesh of their slain animals, some of which lay stretched close around them. After being pent up for thirty-six hours in this horrible hole, during which time they had seldom ventured to raise their heads above the surface without being shot at, they resolved to make a bold *sortie* in the night, as any death was preferable to the fate which awaited them there. As there was not an animal left that was at all in condition to travel, the proprietors of the money gave permission to all to take and appropriate to themselves whatever amount each man could safely undertake to carry. In this way a few hundred dollars were started with, of which, however, but little ever reached the United States. The remainder was buried deep in the sand, in hopes that it might escape the cupidity of the savages; but to very little purpose, for they were afterward seen by some Mexican traders making a great display of specie, which was without doubt taken from this unfortunate *cache*.

With every prospect of being discovered, overtaken, and butchered, but resolved to sell their lives as dearly as possible, they at last emerged from their hiding-place, and moved on silently and slowly until they found themselves beyond the purlieus of the Indian camps. Often did they look back in the direction where from three to five hundred savages were supposed to watch their movements, but, much to their astonishment, no one appeared to be in pursuit. The Indians believing, no doubt, that the property of the traders would come into their hands, and having no amateur predilection for taking scalps at the risk of losing their own, appeared willing enough to let the spoliated adventurers depart without further molestation.

The destitute travelers having run themselves short of provisions, and being no longer able to kill game for want of materials to load their rifles with, they were very soon reduced to the necessity of sustaining life upon roots and the tender bark of trees. After traveling for several days in this desperate condition, with lacerated feet and utter prostration of mind and body, they began to disagree among themselves about the route to be pursued, and eventually separated into two distinct parties. Five of these unhappy men steered a westward course, and after a succession of sufferings and privations, which almost surpassed belief, they reached the settlements of the Creek Indians, near the Arkansas River, where they were treated with great kindness and hospitality. The other five wandered about in the greatest state of distress and bewilderment, and only two finally succeeded in getting out of the mazes of the wilderness. Among those who were abandoned to their fate and left to perish thus miserably, was a Mr. Schenck, the same individual who had been shot in the thigh; a gentleman of talent and excellent family connections, from Ohio.

So repeated and daring were the outrages committed upon the traders, that they were obliged to petition government for large escorts of United States troops, which were granted. The Indians appeared resolved, if possible, to check all intercourse of the whites upon the prairies, and had it not been for the presence of the troops, would have succeeded in their object.

The arrival of a caravan at Santa Fe, which was usually ten weeks on the route, produced considerable bustle and excitement among the natives, and at once changed the aspect of the place. Men and boys flocked around to see the new comers, while crowds of leperos hung about watching opportunities to pilfer. The wagons were discharged at the custom-house, the duties paid upon the goods generally averaging about one hundred per cent. on the home cost. In a few days the goods were discharged, and then, instead of the idleness and stagnation which the streets of Santa Fe usually exhibited, there were all the bustle, noise, and activity of a market town crowded by numerous country dealers, who resorted to the capital on these occasions.

The outward journeys of the caravans were usually made in the spring and early part of summer—the return trips in the autumn. Eventually, half the entire imports by the Missouri caravans were sent to Chihuahua (pronounced *She-waw-waw*) from Santa Fe. The Santa Fe trade continued to increase until the year 1843, when the amount of merchandise, thus transported, amounted to \$450,000, which was conveyed by two hundred and thirty wagons. While the trade increased, the prices decreased, and taking assortments round, one hundred per cent. on the home cost, was generally considered excellent sales.

In 1843, the Santa Fe trade was, for a time, closed by Santa Anna, in consequence of the attacks of the Texans upon the caravans. Keeping beyond the territory of the United States, the right of the Texans to harass the commerce of the Mexicans will hardly be denied, as they were at open war, yet they were aware that but a small part of the traders were Mexicans, and this should have had a restraining influence upon them.

THE BLACK HAWK WAR.

In the year 1804, Gen. Harrison made a treaty with the Sacs and Foxes—two tribes united as one—by which they ceded the lands east of the Mississippi to the United States; but to these lands they had no original right, even in the Indian sense, as they were intruders on the country of the Santeurs and Iowas. By this treaty they were permitted to reside and hunt upon these lands until sold for settlement by government.

This treaty was re-confirmed by the Indians in the years 1815 and 1816. Black Hawk, who was *never* a chief, but merely an Indian *brave*, collected a few disaffected spirits, and refusing to attend the negotiations of 1816, went to Canada, proclaimed himself and party British, and received presents from them.

The treaty of 1804 was again ratified in 1822, by the Sacs and Foxes, in “full council, at Fort Armstrong, Rock Island, on the Mississippi. In 1825, another treaty was held at Prairie du Chien, with the Indians, by William Clarke and Lewis Cass, for the purpose of bringing about a peace between the Sacs and Foxes, the Chippeways, and the Iowas on the one hand, and the Sioux or Dacotahs on the other. Hostilities continuing, the United States, in 1827, interfered between the contending tribes. This offended the Indians, who thereupon murdered two whites in the vicinity of Prairie du Chien, and attacked two boats on the Mississippi, conveying supplies to Fort Snelling, and killed and wounded several of the crews. Upon this, Gen. Atkinson marched into the Winnebago country, and made prisoners of Red Bird and six others, who were imprisoned at Prairie du Chien. A part of those arrested were convicted on trial, and in December of the following

year (1818) executed. Among those discharged for want of proof was Black Hawk, then about sixty years of age.

About this time, the President issued a proclamation, according to law, and the country, about the mouth of Rock River, which had been previously surveyed, was sold, and the year following, was taken possession of by American families. Some time previous to this, after the death of old Quashquame, Keokuk was appointed chief of the Sac nation. The United States gave notice to the Indians to leave the country, east of the Mississippi, and Keokuk made the same proclamation to the Sacs, and a portion of the nation, with their regular chiefs, with Keokuk at their head, peaceably retired across the Mississippi. Up to this period, Black Hawk continued his annual visits to Malden, and received his annuity for allegiance to the British government. He would not recognize Keokuk as chief, but gathered about him all the restless spirits of his tribe, many of whom were young, and fired with the ambition of becoming "braves," and set up himself for a chief.

Black Hawk was not a Pontiac or a Tecumseh. He had neither the talent or the influence to form any comprehensive schemes of action, yet he made an abortive attempt to unite all the Indians of the West, from Rock River to Mexico, in a war against the United States.

Still another treaty, and the seventh in succession, was made with the Sacs and Foxes, on the 15th of July, 1830, in which they again confirmed the preceding treaties, and promised to remove from Illinois to the territory west of the Mississippi. This was no new cession, but a recognition of the former treaties by the proper authorities of the nation, and a renewed pledge of fidelity to the United States.

During all this time, Black Hawk was gaining accessions to his party. Like Tecumseh, he, too, had his Prophet—whose influence over the superstitious savages, was not without effect.

In 1830, an arrangement was made by the Americans, who had purchased the land above the mouth of Rock River, and the Indians that remained, to live as neighbors, the latter cultivating their old fields. Their inclosures consisted of stakes stuck in the ground, and small poles tied with strips of bark transversely. The Indians left for their summer's hunt, and returned when their corn was in the milk—gathered it, and turned their horses into the fields, cultivated by the Americans, to gather their crop. Some depredations were committed on their hogs and other property. The Indians departed on their winter's hunt, but returned early in the spring of 1831, under the guidance of Black Hawk, and committed depredations on the frontier settlements. Their leader was a cunning, shrewd Indian, and trained his party to commit various depredations on the property of the frontier inhabitants, but not to attack, or kill any person. His policy was to provoke the Americans to make war on him, and thus seem to fight in defense of

Indian rights, and the "graves of their fathers." Numerous affidavits, from persons of unquestionable integrity sworn to before the proper officers, were made out and sent to Governor Reynolds, attesting to these and many other facts.

Black Hawk had about five hundred Indians in training, with horses, well provided with arms, and invaded the State of Illinois with hostile designs. These facts were known to the Governor and other officers of the State. Consequently, Governor Reynolds, on the 28th of May, 1831, made a call for volunteers, and communicated the facts to General Gaines of this military district, and made a call for regular troops. The State was invaded by a hostile band of savages, under an avowed enemy of the United States. The military turned out to the number of twelve hundred or more, on horseback, and under command of the late General Joseph Duncan, marched to Rock River.

The regular troops went up the Mississippi in June. Black Hawk and his men, alarmed at this formidable appearance, recrossed the Mississippi, sent a white flag, and made a treaty, in which the United States agreed to furnish them a large amount of corn and other necessaries, if they would observe the treaty.

Early in the spring of 1832, Black Hawk, regardless of the admonition of General Atkinson, who was stationed at Fort Armstrong, on Rock Island, recrossed the Mississippi, and commenced his march up Rock River. The troops, both regular and militia, were mustered and marched in pursuit of the invaders. On the 14th of May, a party of two hundred and seventy volunteers under Major Stillwell, were preparing to encamp for the night on a small stream, in what is now the eastern part of Ogle county, about twenty-five miles above Dixon's ferry, when a party of five Indians were discovered by the volunteers. A large part of the latter elated at the prospect of an Indian fight, mounted their horses without orders, and gave chase. Three of the five were overtaken and captured; the remaining two escaped into the edge of a forest, where about forty warriors, under Black Hawk, lay concealed, and rising from their ambush, with a terrific warhoop, rushed upon the assailants. This struck such a terror into the detachment, that regardless of the orders of their commander, they wheeled about, and galloped away with the utmost speed; nor did they discontinue their inglorious retreat, until they arrived at Dixon's Ferry, where General Whiteside was encamped with one thousand mounted men. Eleven whites were killed on this occasion; their bodies were shamefully mutilated; in some cases, heads, hands, feet, and tongues were cut off, and in others, hearts were torn out, and intestines scattered about on the prairies.

The affair at "Stillman's Run," alarmed the whole country, and Governor Reynolds made a call for an additional force of three thousand militia. War being now commenced, the party of Black Hawk committed several murders. Seventy of his warriors on the 21st of May, attacked the Indian Creek settlement, in La

Salle county, killed fifteen persons, and took the two Misses Hall prisoners. About this time, a Dunkard preacher was massacred on the road to Chicago. His head was severed from his body, and carried off as a trophy; it presented a singular appearance, the beard being nearly a yard in length. On the 22d of May, a party of spies sent by General Atkinson with dispatches to Fort Armstrong, were attacked, four of whom were killed, and scalped. On the 6th of June, a small settlement at the mouth of Plum River, near Galena, was unsuccessfully attacked, the people having resorted to a block-house for defense. During this period, several skirmishes took place between small parties of the whites and the Indians, in which Captain (now Ex-Governor) Dodge, Captain Stephenson, Captain Snyder, and General Semple distinguished themselves.

The three thousand Illinois militia, who had been ordered out, marched to Rock River, where they were joined by the United States troops. Six hundred mounted men were also ordered out, while General Scott, with nine companies of artillery, was hastening from Old Point Comfort on the Virginia shore, to Chicago, but before they could reach the scene of action, the war was over.

On the 24th of June, Major Demont with about one hundred and fifty Illinois militia advancing toward Galena from Rock River, was attacked near Buffalo Grove, by two hundred Indians, led on by Black Hawk. The battle was severely contested, and several on both sides were killed. Major Demont, though compelled to retreat, was complimented for his bravery. Repossessing himself of a block-house he had left the same morning, he was unsuccessfully besieged by the Indians. The main army subsequently moved up to Koshkenong Lake, an expansion of Fox River. Being almost destitute of provisions, Gen. Henry was sent for supplies to Fort Winnebago, at the portage between Fox and Wisconsin Rivers, with one hundred and fifty men, together with Dodge's battalion. Learning that Black Hawk's band was in that vicinity, he pursued, and on the 21st of July overtook them a little before sunset. They were secreted in a low ravine, near the Wisconsin, in the neighborhood of the Blue Mounds. They made a sudden and unexpected attack upon the second battalion, commanded by Major Ewing. That officer formed his men, and sustained the attack until the main body came up, under General Henry and Major Dodge. The army then formed into a hollow square. A spirited but unsuccessful attack was made by the Indians, on the right and left, when the whole line was ordered to charge. The order was promptly executed. Amid the yells of the Indians, and the cries from the whites, "Stillman is not here," the former were driven from the field. Night coming on, the army encamped. The loss of the Americans was one killed, and eight wounded—sixty-two of the enemy, the next morning, were found dead on the field.

The main army, under General Atkinson, having joined Henry,

the whole crossed the Wisconsin in pursuit of the enemy. On the 2d of August, they came up with Black Hawk on the bank of the Mississippi, nearly opposite the mouth of the Iowa. The Indians were attacked, defeated, and dispersed, with a loss of about one hundred and fifty killed and wounded, and thirty-nine women and children taken prisoners. The whites lost but eighteen men.

The steamboat *Warrior*, which was employed in bringing supplies for the army, arrived on the river opposite the battle-ground in the afternoon before the day of the action; at which time the Indians raised a white flag. As they declined coming on board, the captain suspected it to be a mere decoy, and accordingly commenced an action by discharging at them a six pounder, loaded with canister shot, followed by a severe discharge of musketry. The Indians returned the fire, and the battle continued for near an hour, when their wood beginning to fail, the boat drew off. The *Warrior* had but one man wounded; twenty-three of the enemy were killed. In the action of the next day, the *Warrior* participated.

It is a subject of regret that so little discrimination was made between the slaughter of those in arms and others. Here women and children, without design, came in for their share. Some who sought refuge in the Mississippi, and attempted to buffet its waves, were here shot down by the soldiers. A Sac woman, by the name of Na-wa-se, the sister of a distinguished chief, having been in the hottest of the fight, succeeded at length in reaching the river. Wrapping her infant in her blanket, and holding it between her teeth, she plunged into the water; and seizing hold of the tail of a horse, whose rider was swimming to the opposite shore, was carried safely across the stream. There is, however, some apology even for this indiscriminate slaughter. When the Americans closed upon the Indians, the latter were all huddled together. The high grass on the "bottoms" prevented discrimination, and the slaughter fell upon all. It could not, under such circumstances, be confined to the warriors. Many women, and some children, were thus unintentionally slain. A young squaw, standing on the grass a short distance from the American lines, holding her child, a little girl of four years old, in her arms, was shot down. The ball having struck the right arm of the child above its elbow, and shattered the bone, passed into the breast of its mother, and killed her on the spot; she fell upon her child and confined it to the ground. When the battle was over, and the Indians were driven from the field, Lieut. Anderson of the United States army, hearing its cries, repaired to the spot; and removing the dead mother, took the child in his arms for surgical aid. Its arm was afterward amputated; and during the operation the half-starved child sat quietly eating a piece of hard biscuit, insensible, apparently, of its condition. It afterward recovered.

This battle entirely broke the power of Black Hawk. He fled, was seized by the Winnebagoes, and in less than a month after his

defeat, was delivered up to the United States officers at Prairie du Chien. On this occasion Black Hawk made a speech, an extract from which follows :

“ My warriors fell around me ; it began to look dismal. I saw my evil day at hand. The sun rose clear on us in the morning, and at night it sunk in a dark cloud, and looked like a ball of fire. This was the last sun that shone on Black Hawk. He is now a prisoner to the white man. But he can stand the torture. He is not afraid of death. He is no coward. Black Hawk is an Indian ; he has done nothing of which an Indian need to be ashamed. He has fought the battles of his country against the white men, who came, year after year, to cheat them and take away their lands. You know the cause of our making war—it is known to all white men—they ought to be ashamed of it. The white men despise the Indians, and drive them from their homes. But the Indians are not deceitful. The white men speak bad of the Indian, and look at him spitefully. But the Indian does not tell lies ; Indians do not steal. Black Hawk is satisfied. He will go to the world of spirits contented. He has done his duty—his Father will meet him and reward him.

“ The white men do not scalp the head, but they do worse—they poison the heart : it is not pure with them. His countrymen will not be scalped, but they will, in a few years, become like the white men, so that you cannot hurt them ; and there must be, as in the white settlements, nearly as many officers as men, to take care of them and keep them in order. Farewell to my nation ! Farewell to Black Hawk ! ”

The United States troops under General Scott, during the months of July and August, were contending with a worse than Indian foe. The Asiatic cholera, which had just reached the country, overtook his troops at Detroit. At Fort Gratiot, two hundred and eight men, alarmed for their safety, landed under Colonel Twiggs. Among these the disease made such awful ravages, that only a few escaped. Some of them died in the hospital, some in the woods, and some deserted to avoid the pestilence ; and being scattered about the country, shunned by the terrified inhabitants, and repelled from their cottage doors, wandered about they knew not whither, and laid down in the fields and died, without a friend to close their eyes, or to console the last moments of their existence. The residue continued on their course, and most of them arrived safely at Mackinaw. There was, at that time, but few sick or diseased among them. The cholera, however, soon renewed its ravages, and on their passage from Mackinaw to Chicago, thirty were thrown overboard. General Scott reached Chicago on the 8th of July, 1832. On his arrival, Fort Dearborn was converted into a hospital. During the first thirty days after his arrival, ninety of his detachment paid their debts to Nature, and were “ whelmed in pits ” without coffins—“ without notice and without remembrance.” The scene of horror occasioned by this singular disease, no pen

MOUNTAIN SCENERY IN WESTERN VIRGINIA.

"Nature is there in all her glory."

can describe, no heart conceive, and no tongue can adequately tell.

In September, the difficulties with the Indians were settled by a treaty, in which they ceded to the United States thirty millions of acres. Black Hawk and his family were sent as hostages to Fort Monroe, on the Chesapeake, where they remained until July, 1833. He soon after returned to his people, and dying a few years subsequent, was buried on the banks of the Mississippi. He possessed the common savage virtue of bravery; but in intellectual qualities, was not to be compared with Pontiac or Tecumseh.

THE PESTILENCE—A FRONTIER SKETCH.

THE pioneer is the "forlorn hope" of civilization. He marches into the wilderness, and encounters peril, hardship and suffering in a thousand different forms, and thus prepares the way smooth for those who follow.

The settlers of most new countries are afflicted with bilious and intermittent fevers, which prevail far more extensively at some seasons than at others. The summer and fall of 1838—the year of the great eclipse of the sun—was a period of unusual sickness in the West, particularly in Illinois. A sketch of the scenes which there fell under the observation of the writer is annexed below. It most vividly describes a kind of experience that belongs to the history of the country.

The close of the summer found our home a melancholy one. Days of agony, and nights of delicious visions that made the morning sorrowful, wore slowly away. Abroad the gloom still deepened. The sickness which had begun early to prevail in various parts of the country, increased in strength and malignancy. The longer the drought held, the more fatal grew its ravages, and the more cheerless the aspect of the whole land. Vegetation was parched to ashes; the dews no longer fell; the thirsty earth gaped under the merciless sun; and the trodden roads were piled with dust, so that every breath of wind which swept across them, and every vehicle that passed along, raised a blinding cloud. The skies seemed to have shut their chamber of mercy, and to have no relenting toward the blighted earth. For long, long weeks the heavens were watched for a cloud, or some sign of mercy, but in vain. A hard metallic glare pervaded the whole arch, an impassable barrier to the blessings we so much craved. Meantime, pain, disease and death were stalking abroad. The pestilence claimed its victims in almost every house. In some the whole family was prostrated, and the sufferers were dependent on the kindness of their distant neighbors to minister to their wants.

The fevers took their most malignant and fatal character in the "cotton lands." There gigantic trees shoot up on the rich earth

made by the spring floods, and weave their heavy branches above into a dense canopy, which the sun can scarcely penetrate. On the black soil, below which is often ten, twelve or fifteen feet in depth, and of the finest loam, vegetation riots in unbounded energy. Immense quantities are produced, the decay of which, with the heavy foliage of the trees, generates vast volumes of miasmata. The high bluffs then which border these teeming lands, together with the dense wood that covers them, prevent the circulation of the purer air from the uplands, and leave all the causes of disease to take their most concentrated forms among the unfortunate settlers. Here, therefore, at this fated period, the pestilence found its readiest and most numerous victims. In riding through these regions, one would frequently find houses in which every member of the family was sick; so that it was a blessing for a stranger to call and hand them a cup of water. In these districts, individuals were found lying in all stages of disease. Some had never been seen by a physician; and the few that recovered wore a ghastly sallow hue, that was frightful to behold, as they crept about their death-stricken homes.

One could ride miles through these dark woods, the steady sun, when it poured through the leaves, heating the still air almost to suffocation, and pass on his route many cabins apparently deserted; but on entering, he would find two or three, or perhaps a greater number of persons lying in the same dark room, tossing and raging in the various stages of consuming fever. It was frightful to hear of, still more so to witness, their condition.

But suffering and mortality were not confined to these gloomy districts. They spread throughout the entire country. Our little village was one of the last spots visited. On the 18th of September, the day of the great eclipse, two infants, twin daughters of our village teacher, were buried. I remember well the gloom of that afternoon. It was easy to conceive how, in periods of affliction and calamity, the benighted nations that had lived here before us should construe such an impressive phenomenon into an expression of anger by the Great Spirit. The prolonged and unnatural darkness, and the alarm which prevails among the lower animals, following the impression already produced upon the mind, might well be considered as evidence of displeasure in the Power that rules the element.

We trusted that some change would be wrought in the atmosphere by this great event, that would break the dreadful monotony of drought. There were but three or four wells in the village that afforded any water, and the earth seemed actually consuming under the fiery orb, now for a brief space hidden from our weary eyes. Not a drop of rain had fallen for near seven weeks, and for a previous period of nearly twice that length, the few showers that had descended were barely sufficient to saturate the dust. But our hopes were vain. The shadow passed from the sun, and he rode out, glaring and bright as ever, into the relentless heavens.

Gloom and despair brooded over everything. Nature seemed about to light her own funeral pile. People walked slowly about, with countenances darkened by their own griefs, or saddened with sympathy for their neighbors.

THE EDUCATED INDIAN TRAPPER.

PROVIDENCE seems to have made some races of mankind for a mere temporary object. They appear upon earth, fulfill their allotted part, and then disappear forever from the stage of human action, oftentimes leaving no traces, save the bare fact of their having once existed. Such seems to be the destiny of the aborigines of our country. Their course is nearly run; and in a few more generations, they will exist alone in the annals of the past! Attempts to civilize them generally met with signal failure. There is something inherent in their nature that forbids it.

A gentleman, who was traveling in the vicinity of the Rocky Mountains some few years since, has given an interesting sketch of an Indian whom he met near the headwaters of the Arkansas, who had been educated among the whites; but, true to his natural instincts, he had forsaken civilized life, and taking to the prairies and mountains of the Far West, had become once more a free man of the forests. His sketch we annex.

One of these trappers whom I met at Bent's Fort was from New Hampshire. He had been educated at Dartmouth College, and was altogether one of the most remarkable men I ever knew. A splendid gentleman, a finished scholar, a critic on English and Roman literature, a politician, a trapper, and *an Indian!* His stature was something more than six feet; his shoulders and chest were broad, and his arms and lower limbs well formed and very muscular. His head was clothed with hair as black as jet, near a yard in length, smoothly combed, and hanging down his back. He was dressed in a deer-skin frock, leggings and moccasins; not a thread of cloth about his person.

Having ascertained that he was proud of his learning, I approached him through that medium. He seemed pleased at this compliment of his superiority to those around him, and at once became easy and talkative. His "Alma mater" was described and re-described. All the fields, and walks, and rivulets, the beautiful Connecticut, the evergreen primitive hedges lying along its banks, which, he said, "had smiled for a thousand ages on the march of decay," were successive themes of his gigantic imagination. His descriptions were minute and exquisite. He saw in everything all that Science sees, together with all that his capacious intellect, instructed and imbued with the wild fancyings and legends of his race, could see. I inquired the reason of his leaving civilized life for a precarious livelihood in the wilderness. "For reasons

founded in the nature of my race," he replied. "The Indian's eye cannot be satisfied with a description of things, howsoever beautiful may be the style or the harmonies of verse in which it is conveyed. For neither the periods of burning eloquence, nor the mighty and beautiful creations of the imagination can unbosom the treasures and realities as they live in their own native magnificence on the eternal mountains and in the secret untrodden vale.

"As soon as you thrust the plowshare under the earth, it teems with worms and useless weeds. It increases population to an unnatural extent—creates the necessity of penal enactments—builds the jail—erects the gallows—spreads over the human face a mask of deception and selfishness—and substitutes villany, love of wealth and power, and the slaughter of millions for the gratification of some royal cut-throat, in the place of the single-minded honesty, the hospitality, the honor, and the purity of the natural state. Hence, whenever agriculture appears, the increase of moral and physical evil induces the thousand necessities, as they are termed, for abridging human liberty; for fettering down the mind to the principles of right, derived not from nature, but from a restrained and forced condition of existence. And hence, my race, with mental and physical habits as free as the waters that flow from the hills, become restive under the rules of civilized life; dwindle to their graves under the control of laws and customs, and forms, which have grown out of the endless vices and the factitious virtues of another race.

"Red men often acquire and love the sciences; but with the nature the Great Spirit has given them, what are all their truths to them? Would an Indian ever measure the height of a mountain that he could climb? No, never! The legends of his tribe tell him nothing about quadrants and base-lines, and angles. Their old braves, however, have for ages watched from the cliffs the green life in the spring, and the yellow death in the autumn of their holy forests. Why should he ever calculate an eclipse? He always knew such occurrences to be the doings of the Great Spirit. Science, it is true, can tell the times and seasons of their coming; but the Indian, when they do occur, looks through Nature, without the aid of Science, up to its cause. Of what use is a Lunar to him? His swift canoe has the green embowered shores and well known head-lands to guide his course. In fine, what are the arts of Peace, of War, of Agriculture, or anything civilized to him? His nature and its elements, like the pine which shadows his wigwam, are too mighty, too grand, of too strong a fiber to form a stock on which to ingraft the rose or the violet of polished life. No! I must range the hills; I must always be able to out-travel my horse; I must always be able to strip my own wardrobe from the backs of the deer and buffalo, and to feed upon their rich loins; I must always be able to punish my enemy with my own hand, or I am no longer an Indian. And if I am anything else, I am a mere imitation, an ape."

The enthusiasm, with which these sentiments were uttered, impressed me with an awe I had never previously felt for the unborrowed dignity and independence of the genuine original character of the American Indians. Enfeebled and reduced to a state of dependence by disease and the crowding hosts of civilized men, we find among them still too much of their own to adopt the character of any other race; too much bravery to feel like a conquered people, and a preference of annihilation to the abandonment of that course of life, consecrated by a hundred generations of venerated ancestors.

This Indian had been trapping among the Rocky Mountains for seventeen years. During that time, he has often been employed as an express to carry news from one trading-post to another and from the mountains of the Missouri. In these journeys he has been remarkable for the directness of his courses, and the exceeding short spaces of time required to accomplish them. Mountains that neither Indian nor white man dared attempt to scale, he has crossed. Angry streams, heavy and cold from the snows, and plunging and roaring among the girded caverns of the hills, he has swam. He has met the tempest as it groaned over the plains and hung upon the trembling towers of the everlasting hills; and without a horse, or even a dog, traversed often the terrible and boundless wastes of mountains and plains and desert valleys; and the ruder the blast, the larger the bolts, and louder the peals of the dreadful tempest, when the earth and sky seemed joined by a moving cataract of flood and flame driven by the wind, the more was it like himself, a free, unmarred manifestation of the sublime energies of Nature. He said that he never again intended to visit the States, or any other part of the earth, "which has been torn and spoiled by the slaves of Agriculture." "I shall live," said he, "and die in the wilderness." And assuredly he should thus live and die. The music of the rushing waters should be his requiem and the Great Wilderness his tomb!.

LIFE IN THE MOUNTAINS OF VIRGINIA.

THIS description—written some time since by the compiler of this volume for another publication—in general, will apply to the inhabitants of the range of mountains which occupy the western parts of Virginia and the Carolinas, and the eastern portions of Kentucky and Tennessee, and of north Georgia; as they are all essentially the same people in origin, modes of life, and in their isolation from the rest of the country. While they, in many respects, resemble the settlers on the frontiers of the Far West, in others they are dissimilar, the progress of the country being slower, their isolation greater, and the spirit of enterprise less.

Those who have been bred in, and have not traveled out of the

old and long-settled portions of our Union, can have but inaccurate ideas of the modes of life in its new and sparsely-inhabited regions. And, perchance, when they do gain experience of this nature, they find much to amuse and instruct, not in ascertaining "how the other half of the world live," but in observing how others, dwelling under the same institutions, protected by the same laws, and with the same star-dotted flag waving above, march onward along the highway of life.

In the inhabitants of none will there be found a greater diversity than between those of the north and east, and those of the more secluded mountain counties of Virginia. A great part of Western Virginia is yet a new country and so thinly settled, that the population of a whole county frequently does not equal that of a single agricultural township of the former. Remote and inaccessible as they are, the manners and habits of the population are quite primitive. So far are they from market, that the people in many districts can sell only what will, as they say, "walk away," that is, cattle, horses, swine, etc. Consequently there is but little inducement to raise more than sufficient grain for home consumption, and next to none for enterprise on the part of the agriculturist. For foreign luxuries, as sugar, tea, coffee, etc., the mountaineer is obliged to pay an enormous advance in the heavy cost of transportation; but, graduating his desires to his means, he leads a simple, yet manly life, and breathes the pure air of the mountains with the contented spirit of a freeman.

Thus the inhabitant of these elevated regions is almost perfectly independent. The cares, the fruits of a more luxurious state, the turmoil of business, the aims of fashion, the struggles for social supremacy, all these to him are things unknown. He has heard of cities, of their wonders of art, of their magnificent temples; but, untraveled as he is, these reports fall upon his ears almost like revelations from another hemisphere.

Here many a young man, with but few worldly goods, marries; and with an ax on one shoulder, and a rifle on the other, goes into the recesses of the mountains where land is of no market value. In a few days he has a log-house and a small clearing. Visit some such on a fine day, when thirty years have rolled past, and you will find he has eight or ten children—a hardy, healthy set—thirty or forty acres cleared, mostly cultivated in corn; a rude, square log bin, built in cob-house fashion, and filled with corn, will stand beside his cabin; near, a similar structure contains his horse; scattered about are half a dozen hayricks, and an immense drove of swine will be roaming in the adjacent forest; and if it is called "*mast-year*"—that is, a season when the woods abound in nuts, acorns, etc.,—these animals, swelling with fatness, will display evidence of good living.

Enter the dwelling. The woman of the house, and all her children, are attired in homespun. Her dress is large and convenient, and instead of being closed by hooks and eyes, is buttoned together.

She looks strong and healthy ; so do her daughters ; and rosy and blooming as " flowers by the wayside." The house and furniture are exceedingly plain and simple, and with the exception of what belongs to the cupboard, principally manufactured in the neighborhood. The husband is absent hunting. At certain seasons, what time he can spare from his little farm, he passes in the excitement of the chase, and sells the skins of his game.

Soon he enters with a buck or a bear he has shot—for he is a skillful marksman—or, perhaps, some other game. He is fifty years of age, yet in his prime—a stout, athletic man, robed in a hunting-shirt of picturesque form, made, too, of homespun, and ornamented with variegated fringe ; and a pair of moccasins are on his feet. He receives you with a blunt, honest welcome, and as he gives you his hand his heart goes with it ; for he looks upon you as a friend. He has passed his life in the mountains among a simple-hearted people, who have but little practical knowledge of the deceit which those living in luxurious, densely-populated communities, among the competitory avocations of society, are tempted to practice. His wife prepares dinner. A neat, white cloth is spread ; and soon the table is covered with good things. On it is a plate of hot corn-bread, preserves of various kinds, bacon, venison, and perhaps bear's meat. Your host may ask a blessing—thanks to the itinerating system of the Methodists, which has even reached this remote spot!—his wife pours you out a dish of coffee, the greatest luxury of the country ; it is thickened with cream, not milk, and sweetened with sugar from the maple grove just in front of the house. The host bids you help yourself, and you partake with a relish you never had at Astor's.

Now mount your nag and be off! As you descend the mountain path, faintly discerned before you, and breathe the pure, fresh air of the hills, cast your eyes upon one of the most impressive scenes ; for Nature is there in all her glory. Far down in the valley to the right, winds a lovely stream ; there hid by the foliage overarching its bright waters ; anon it appears in a clearing ; again concealed by a sweep of the mountain you are descending ; still beyond it reappears, diminished to a silvery thread: To the right and front is a huge mountain, in luxuriant verdure, at places curving far into the plain, and at those points and at the summits bathed in a sea of light ; at others, receding, thrown into dark, sombre, forbidding shades. Beyond are mountains piled on mountains, like an uptossed ocean of ridges ; these melt, by distance, into fainter and still fainter hues, until sky and mountain, assuming the same delicate, ethereal tint of lightest blue, appear to meet as one far, far away at the outer line of the visible world.

High in blue ether float clouds of snowy white ; and in majestic flight sails the bird of the mountain with an air wild and free as the spirit of liberty. How everything is rejoicing all around! Innumerable songsters are warbling sweetest music ; those wild flowers, with scarce the morning dew from off their lips, are

opening their bright cheeks to the sun; and even the tiny insects flitting through the air, join in the universal halleluiah.

Now, fast losing the scene, you are entering the dark, solemn forest. Soon you are at the base of the mountain, when, from the copse, out starts a deer! The graceful, timid creature pricks up her ears, distends her nostrils in fear, gathers her slender limbs for a spring, pauses for a moment, and then suddenly bounds away, over hillocks and through ravines, and is seen no more. The stream, broad and shallow, is wending its way across your road with gentle murmurings. Splash! splash! goes your horse's feet in the water; forty times in ten miles does it cross your road, and in various places for hundreds of yards your course is directly through it. There are no bridges across it, and next to none in Western Virginia.

* * * * *

The above picture of a mountaineer, with the sketch of the wild and romantic scenery in which "he moves, lives, and has his being," is a common, though not a universal one.

These mountain fastnesses contain much latent talent, requiring opportunity only for development; but the sparsely-settled condition of the country prevents such from being given. Many of the people are of Scotch-Irish descent, possessing the bravery and other noble traits of their ancestry. Almost entirely isolated from the world, fashion has not stereotyped manners, modes of thought, and expression; hence, striking originality in idea and ingenuity in metaphor, often are displayed. Not unfrequently in the presence of some one of these unlettered men, have I been humbled in view of an intellect naturally far my superior; an intellect seizing subjects with an iron grasp, perceiving clearly, comparing accurately, combining strongly, and although expressing uncouthly, yet with a power that many a one who has passed his days in academic groves could not equal. Such is the influence of *mind* that, whether seen in the elevated or lowly, in the man of elegance or the rude mountaineer, we instinctively bow in deference.

* * * * *

Toward the close of an autumnal day, in the year 1843, while traveling through this thinly-settled region, I came up with a substantial-looking farmer, leaning on the fence by the roadside. I accompanied him to his house to spend the night. It was a log dwelling, and near it stood another log structure about twelve feet square—the weaving shop of the family. On entering the dwelling I found a numerous family, all clothed in substantial garments of their own manufacture. The floor was unadorned by a carpet, and the room devoid of superfluous furniture, yet they had all that necessity required for their comfort. One needs but little experience like this to discover how few are our real wants—how easily most luxuries of dress, furniture, and equipage can be dispensed with. Soon after my arrival supper was ready. It consisted of fowls, bacon, hoe-cake, and buckwheat cakes. Our beverage was

EMIGRANTS' CAMP

"At sunset, their day's journey finished, they halt, perhaps, in the forest by the roadside, to prepare for supper and to pass the night. The horses are unharnessed, watered and secured, with their heads to the trough, or else hobbled out to grass."

milk, and coffee thickened with cream and sweetened by maple sugar.

Soon as it grew dark, my hostess took down a small candle-mould for three candles, hanging from a wall on a frame-work just in front of the fire-place, in company with a rifle, long strings of dried pumpkins, and other articles of household property. On retiring I was conducted to the room overhead, to which I ascended by stairs out of doors. My bed-fellow was the county sheriff, a young man about my own age; and as we lay together, a fine field was had for astronomical observations through the chinks of the logs. The next morning after rising, I was looking for the washing apparatus, when he tapped me on the shoulder as a signal to accompany him to the brook in the rear of the house, in whose pure crystal waters we performed our morning ablutions.

After breakfast, through the persuasion of the sheriff, who appeared to have taken a sort of fancy to me, I agreed to go across the country by his house. He was on horseback; I on foot, bearing my knapsack. For six miles our route lay through a pathless forest, on emerging from which, we soon passed through the "Court-House," the only village in the county, consisting of about a dozen log-houses and the court building. A mile further, my companion pointed to "*the old field schoolhouse*," in which he was initiated into the mysteries of reading and writing. Soon after we came to a Methodist encampment. The roads here being too rude to transport tents, log structures are built, which stand from year to year, affording much better shelter. This encampment was formed of three continuous lines, each occupying a side of a square, and about one hundred feet in length. Each row was divided into six or ten cabins, with partitions between. The height of the rows on the inner side of the inclosed area was about ten feet; on the outer about six, to which the roofs sloped shed-like. The door of each cabin opened on the inner side of the area, and at the back of each was a log chimney coming up even with the roof. At the upper extremity of the inclosure, formed by these three lines of cabins, was an open shed, a mere roof supported by posts, say thirty by fifty feet, in which was a coarse pulpit and log seats. A few tall trees were standing within the area, and many stumps scattered here and there. The whole establishment was in the depth of a forest, and wild and rude as can well be imagined.

Religious pride would demand a more magnificent temple, where the imposing column and the showy architrave would betoken the power of man, and the lofty vaulted roof gather and roll back the sound of anthems. But where could the humble and the devout more appropriately worship, than here under the blue arch of heaven, surrounded by the darkling wood, where the flitting shadow and the falling leaf were constantly reminding one of the instability of all earthly things?

How full is nature of such monitions! How solemn these words

of the Psalmist: "As for man, his days are as grass: as a flower of the field, so he flourisheth. For the wind passeth over it, and it is gone; and the place thereof, shall know it no more!"

In many of these sparsely-inhabited counties are no settled clergy, and rarely do the people hear any other than the Methodist preachers. Here is the itinerating system of Wesley exhibited in its full usefulness. The circuits are usually of three weeks' duration, in which the clergymen preach daily; so it but rarely happens, in some neighborhoods, when they have divine worship, that it is on the Sabbath. Most of those preachers are energetic, devoted men, and often endure great privations.

After sketching the encampment, I came in a few moments to the dwelling of the sheriff. Close by it were a group of mountain men and women seated around a log bin, about twelve feet square, ten high, and open at the top, into which these neighbors of my companion were casting ears of corn as fast as they could shuck them. Cheerfully they performed their task. The men were large and hardy, the damsels plump and rosy, and all dressed in good warm homespun. The sheriff informed me that he owned about two thousand acres around his dwelling, and that it was worth about one thousand dollars, or fifty cents an acre. I entered his log domicile, which was one story in height, about twenty feet square, and divided into two small rooms, without windows or places to let in light, except by a front and rear door.

I soon partook of a meal in which we had a variety of luxuries, not omitting *bear's meat*. A blessing was asked at the table by one of the neighbors. After supper the bottle, as usual at corn-huskings, was circulated. The sheriff learning I was a Washingtonian, with the politeness of one of nature's gentlemen, refrained from urging me to participate. The men drank but moderately, and we all drew around the fire, the light of which was the only one we had. Hunting stories and kindred topics served to talk down the hours till bedtime.

On awaking in the morning, I saw two ladies cooking breakfast in my bedroom, and three gentlemen seated over the fire, watching that interesting operation. After breakfast, I bade my host farewell, buckled on my knapsack, and left. He was a generous, warm-hearted man, and on my offering remuneration, he replied, "You are welcome; call again when this way."

In the course of two hours, I came to a cabin by the wayside. There being no gate, I sprang over the fence, entered the open door, and was received with a hearty welcome. It was an humble dwelling; the abode of poverty. The few articles of furniture were neat and pleasingly arranged. In the corner stood two beds, one hung with curtains, and both with coverlets of snowy white, contrasting with the dingy log walls, rude furniture, and rough-boarded floor of this, the only room in the dwelling. Around a cheerful fire was seated an interesting family group. In one corner, on the hearth, sat the mother—who had given up her chair

to me—smoking a pipe. Next to her was a little girl in a small chair, holding a young kitten. In the opposite corner sat a venerable old man of Herculean stature, robed in a hunting-shirt, and with a countenance as majestic and impressive as that of a Roman senator. In the center of the group was a young maiden, modest and retiring, not beautiful, except in that moral beauty virtue gives. She was reading to them from a little book. She was the only one of the family who could read, and she could do so but imperfectly. In that small volume, which, perhaps, cost two shillings, was the whole secret of the neatness and happiness found in this lowly cot. That little book was the New Testament.

I conversed with the old man. He was, he said, “a poor mountaineer, ignorant of the world.” He was, it is true; but he had the independence of a man—the humility of a Christian. As I left the cottage, the snow-flakes were slowly falling; and I pursued my lonely way through the forest with buoyant feelings, reflecting upon this exhibition of the religion of the meek and lowly One.

Beautiful are these lines where applied to a similar scene:

“Compared with this, how poor Religion’s pride
 In all the pomp of method and of art,
 Where men display to congregations wide
 Devotion’s every grace except the heart:
 But happy we, in some cottage far apart,
 May hear, well pleased, the language of the soul!”

FREMONT'S EXPEDITIONS.

JOHN C. FREMONT, originally a lieutenant of the United States Topographical Engineers, made three expeditions to the Far West under the authority of the general government, a fourth and a fifth being on private account. The object of the *First Expedition*—made in 1842—was to explore the country between the frontiers of Missouri and the *South Pass* in the Rocky Mountain, on the line of the Great Platte and Kansas Rivers. His party was almost entirely made up in the vicinity of St. Louis, and numbered twenty-eight, including himself. It consisted principally of Creole and Canadian *voyageurs* of French descent, and familiar with prairie life from having been in the service of the fur companies in the Indian country. The noted Christopher or *Kit Carson* was engaged as guide. On the 10th of June, the party left Choteau’s trading-house, near the Missouri, four hundred miles above St. Louis, on the route of their intended explorations.

The journey was one of much interest, and occasionally enlivened by buffalo hunts and interviews with the Indians of the plains. On the 10th of July, they reached Vrain’s Fort, on the south fork of the Platte, and four days after, Fort Laramie, on Laramie’s River. This latter post belonged to the American Fur

Company, and was inhabited by a motley collection of traders with their Indian wives and parti-colored children. After passing beyond the Hot Spring and the Devil's Gate, two narrow and lofty rocky passages in the mountains, on the 8th of August, they came to the *South Pass* of the Rocky Mountains. On the 15th, Fremont ascended the loftiest peak in this part of the range, which is about one hundred miles north of the southern boundary of Oregon. It is now called *Fremont's Peak*, and rises 13,570 feet above the Mexican Gulf, and is in the part termed the Wind River Mountains.

"We rode on," says Fremont, in describing the ascent, "until we came almost immediately below the main peak, which I denominated the *Snow Peak*, as it exhibited more snow to the eye than any of the neighboring summits. Here were three small lakes of a green color, each perhaps a thousand yards in diameter, and apparently very deep. We managed to get our mules up to a little bench, about a hundred feet above the lakes, where there was a patch of good grass, and turned them loose to graze. Having divested ourselves of every unnecessary incumbrance, we commenced this time like experienced travelers. We did not press ourselves, but climbed leisurely, sitting down so soon as we found breath beginning to fail. At intervals, we reached places where a number of springs gushed from the rocks, and about eighteen hundred feet above the lakes, came to the snow line. From this point our progress was uninterrupted climbing. Here I put on a pair of light thin moccasins, as the use of our toes became necessary to a further advance. I availed myself of a sort of a comb of the mountain, which stood against the wall as a buttress, and which the wind and solar radiation, joined to the steepness of the smooth rock, had kept almost entirely free from snow. Up this I made my way rapidly. In a few minutes we reached a point where the buttress was overhanging, and there was no other way of surmounting the difficulty than by passing around one side of it, which was the face of a vertical precipice of several hundred feet.

"Putting hands and feet in the crevices between the rock, I succeeded in getting over it, and when I reached the top, found my companions in a small valley below. Descending to them, we continued climbing, and in a short time, reached the crest. I sprang upon the summit, and another step would have precipitated me into an immense field below. As soon as I had gratified the first feelings of curiosity, I descended, and each man ascended in his turn; for I would only allow one at a time to mount the unstable and precarious slab, which, it seemed, a breath would hurl into the abyss below. We mounted the barometer in the snow of the summit, and fixing a ramrod in a crevice, unfurled the national flag to wave in the breeze where never a flag waved before. A stillness the most profound and a terrible solitude forced themselves constantly on the mind as the great features of the place. The day was sunny and clear, but a bright shining mist hung over the lower plains, which interfered with our view of the surrounding

country. On one side, we overlooked innumerable lakes and streams, the springs of the Colorado of the Gulf of California, and on the other, was the Wind River Valley, where were the heads of the Yellow Stone branch of the Missouri; far to the north, we could just discover the snowy heads of the *Trois Tetons* (a cluster of high pointed mountains covered with perpetual snow, rising almost perpendicularly ten thousand feet), where were the sources of the Missouri and Columbia Rivers; and at the southern extremity of the ridge, the peaks were plainly visible, among which were some of the springs of the Nebraska or Platte River. Around us the whole scene had one main striking feature, which was that of terrible convulsion. Parallel to its length, the ridge was split into chasms and fissures, between which rose the thin, lofty walls, terminating with slender minarets and columns. We had accomplished an object of laudable ambition and beyond the letter of our instructions. We had climbed the loftiest peak of the Rocky Mountains, and looked down upon the snow below, and standing where human feet had never stood before, felt the exultation of first explorers." Soon after, the party set out on their return, and on the 17th of October arrived at St. Louis.

Fremont's *Second Expedition* was made to Oregon and California in the years 1843-44. His corps numbered thirty-nine men, consisting principally of Creoles, Canadian French, and Americans. The party started from the little town of Kansas, on the Missouri frontier, on the 29th of May. Their route was up the valley of the Kansas to the head of the Arkansas and to some pass in the mountains, if any could be found at the sources of that river.

In the early part of their journey, trains of emigrant wagons were almost constantly in sight on their way to Oregon. On the 10th of July, they came in full sight of Pike's Peak. It looked grand and luminous, glittering with snow at the distance of forty miles. On the 13th of August, they crossed the Rocky Mountains at the South Pass. This is on the common traveling route of emigration to Oregon, and about half way between the Mississippi and the Pacific Ocean. On the 6th of September, they ascended an eminence from which they beheld the object of their anxious search—the waters of the Great Salt Lake, "the Inland Sea, stretching in a still, solitary grandeur far beyond the limits of their vision."

After the party had visited the lake, they resumed their route to the mouth of the Columbia, where they arrived on the 25th of October, at the Nez Perces Fort, one of the trading establishments of the Hudson Bay Company, at the junction of the Wallawalla with the Columbia River.

On the 4th of November, they came to the termination of their land journey westward, from which point they proceeded down the river in boats to *Fort Vancouver*, on the Columbia, about one hundred miles from its entrance into the Pacific. There they were

hospitably received by Dr. McLaughlin, the executive officer of the Hudson Bay Company west of the Rocky Mountains. They set out on their return, on the 25th of November, by a southern route. They passed to the south, easterly of the Cascade Mountains, to the Pass in the Sierra Nevada, on whose summit they encamped on the 20th of February, 1844. From this point they proceeded in a southwesterly direction toward San Francisco. The party suffered severely while on this mountainous range. Nearly the whole journey had been made over ground covered with snow, without forage for the cattle, which, when they were starved to death, were eaten by their famished owners. The Indian guides would pilot them for short distances, and pointing with their hands the direction they should take, then desert them. With too good a leader to go in any other direction than that pointed out by duty, too brave men to be discouraged by hundreds of miles of untrodden snow, too familiar with death to quail at his embrace, they persevered and murmured not. But among even these iron-hearted travelers, such were their sufferings, that some became deranged, and plunged into the icy torrents, or wandered in the forests. Well might Fremont have said, "That the times were hard when stout men lost their minds from extremity of suffering; when horses died; and when mules and horses, ready to die from starvation, were killed for food."

On the 10th of January, Fremont discovered the Pyramid Lake in California, about three hundred and fifty miles westerly from the Great Salt Lake. It is about forty miles long and twenty broad, and was named from a huge rock of about six hundred feet in height, rising from the water, and presenting a close resemblance in form to the great pyramid of Cheops. It appeared to the party like a gem in the mountains—its dark-green waves curling in the breeze. The position and elevation of this lake make it an object of great geographical interest. It is the nearest lake to the western rim, as the Great Salt Lake is to the eastern rim, of the *Great Basin*, which lies between the Rocky Mountains and the Sierra Nevada, and has a length and breadth of about five hundred miles. The Great Basin is thus described by Fremont: "Elevation between four thousand and five thousand feet; surrounded by lofty mountains; contents almost entirely unknown, but believed to be filled with rivers and lakes, which have no communication with the sea; deserts and oases, which have never been explored; and savage tribes, which no traveler has seen or described."

On the 20th of February, they encamped on the summit of the Pass, on the dividing ridge of the Sierra Nevada (*i. e.* Snowy Mountain), which rises several thousand feet higher than even the Rocky Mountains.

"On the 6th of March," says Fremont, "we came unexpectedly into a large Indian village, where the people looked clean, and wore cotton shirts, and various other articles of dress. They immediately crowded around us, and we had the inexpressible

delight to find one who spoke a little indifferent Spanish, but who at first confounded us by saying that there were no whites in the country; but just then a well dressed Indian came up and made his salutations in very well spoken Spanish. In answer to our inquiries, he informed us that we were upon the *Rio de los Americanos*—the River of the Americans—and that it joined the Sacramento about two miles below. Never did a name sound more sweetly! We felt ourselves among our countrymen; for the name of American, in these distant parts, is applied to citizens of the United States. To our eager inquiries, he replied: 'I am a *vanquero* (cowherd), in the service of Captain Sutter, and the people in this *ranch*e work for him.' Our evident satisfaction made him communicative; and he went on to say, that Captain Sutter was a very rich man, and always glad to see his country people. We asked for his house. He answered, it was just over the hill before us, and offered, if we would wait a moment, to take his horse and conduct us to it. We readily accepted his civil offer. In a short distance we came in sight of the fort; and passing on the way the house of a settler on the opposite ridge (a Mr. Sinclair), we forded the river; and in a few miles were met, a short distance from the fort, by Captain Sutter himself. He gave us a most frank and cordial reception, conducted us immediately to his residence, and under his hospitable roof we had a night of rest, enjoyment and refreshment, which none but ourselves could appreciate."

The route homeward was resumed on the 24th of March. They passed along the valley of the San Joaquin southward to its headwaters, where there was a pass through the mountains to the east. "When at this point," says Fremont, "our cavalcade made a strange and grotesque appearance, and it was impossible to avoid reflecting upon our position and composition in this remote solitude. Within two degrees of the Pacific Ocean; already far south of the latitude of Monterey, and still forced on south by a desert on the one hand, and a mountain range on the other; guided by a civilized Indian, and attended by two wild ones from the Sierra; a Chinook from Columbia; and our own mixture of American, French and German—all armed; four or five languages heard at once; above a hundred horses and mules half wild; American, Spanish and Indian dresses intermingled—such was our composition. Our march was a sort of procession; scouts ahead and on the flanks; a front and rear division; the pack animals, baggage and horned cattle in the center; and the whole stretching a quarter of a mile along our dreary path."

On the 18th of April, Fremont struck the *Spanish Trail*, the great object of their search. From the middle of December, they had been forced south by mountains and by deserts, and now would have to make six degrees of *nothing* to regain the latitude on which they wished to recross the Rocky Mountains. They followed the Spanish Trail to New Mexico, four hundred and forty miles, and then struck off in a northern direction toward Utah Lake—

the southern limb of the Great Salt Lake—which they reached on the 25th of May, having traveled in eight months an immense circuit of three thousand five hundred miles. They crossed the Rocky Mountains about the middle of June, about one hundred and ninety miles south of the South Pass. On the 1st of July, they arrived at Bent's Fort, and on the 31st of July, again encamped on the Kansas, on the frontiers of Missouri.

Fremont was accompanied, as previously mentioned, in this expedition by the celebrated Christopher Carson, commonly called "Kit Carson." Although scarcely thirty winters had passed over him, yet no name was better known in the mountains from Yellow Stone to Spanish Peaks, from Missouri to Columbia River. Small in stature, slender limed, but with muscles of wire, with a fair complexion—to look at Kit, one would not suppose that the mild looking being before him was noted in Indian fight, and had "raised more hair" (i. e. scalped) from Red-skins, than any two men in the western country. Fremont relates a desperate adventure in which Carson and another mountaineer were engaged, which illustrates the daring bravery of the mountain men.

"While encamped on the 24th of April, at a spring near the Spanish Trail, we were surprised by the sudden appearance among us of two Mexicans; a man and a boy—the name of the man was Andreas Fuentes, and that of the boy (a handsome lad eleven years old) Pablo Hernandez. With a cavalcade of about thirty horses, they had come out from Pueblo de los Angeles, near the Pacific; had lost half their animals, stolen by Indians, and now sought my camp for aid. Carson and Godey, two of my men, volunteered to pursue them, with the Mexican; and, well mounted, the three set off on the trail. In the evening Fuentes returned, his horse having failed; but Carson and Godey had continued the pursuit.

"In the afternoon of the next day, a warhoop was heard, such as Indians make when returning from a victorious enterprise; and soon Carson and Godey appeared driving before them a band of horses, recognized by Fuentes to be a part of those they had lost. Two bloody scalps dangling from the end of Godey's gun, announced that they had overtaken the Indians as well as the horses. They had continued the pursuit alone after Fuentes left them, and toward night-fall entered the mountains into which the trail led. After sunset the moon gave light, and they followed the trail by moonlight until late in the night, when it entered a narrow defile, and was difficult to follow. Here they lay from midnight until morning. At daylight they resumed the pursuit, and at sunrise discovered the horses; and immediately dismounting and tying up their own, they crept cautiously to a rising ground which intervened, from the crest of which they perceived the encampment of four lodges close by. They proceeded quietly, and had got within thirty or forty yards of their object, when a movement among the horses discovered them to the Indians. Giving the

war shout, they instantly charged in the camp, regardless of the numbers which the *four* lodges might contain. The Indians received them with a flight of arrows, shot from their long bows, one of which passed through Godey's shirt collar, barely missing the neck. Our men fired their rifles upon a steady aim, and rushed in. Two Indians were stretched upon the ground, fatally pierced with bullets; the rest fled, except a lad, who was captured. The scalps of the fallen were instantly stripped off, but in the process, one of them who had two balls through his body, sprung to his feet, the blood streaming from his skinned head, and uttered a hideous howl. The frightful spectacle appalled the stout hearts of our men; but they did what humanity required, and quickly terminated the agonies of the gory savage. They were now masters of the camp, which was a pretty little recess in the mountain, with a fine spring, and apparently safe from all invasion. Great preparations had been made for feasting a large party, for it was a very proper place for a rendezvous, and for the celebration of such orgies as robbers of the desert would delight in. Several of the horses had been killed, skinned, and cut up—for the Indians living in the mountains, and only coming into the plains to rob and murder, make no other use of horses than to eat them. Large earthen vessels were on the fire, boiling and stewing the horse beef; and several baskets containing fifty or sixty pairs of moccasins, indicated the presence or expectation of a large party. They released the boy, who had given strong evidence of the stoicism, or something else of the savage character, by commencing his breakfast upon a horse's head, as soon as he found he was not to be killed, but only tied as a prisoner.

"Their object accomplished, our men gathered up all the surviving horses, fifteen in number, returned upon their trail, and rejoined us at our camp in the afternoon of the same day. They had rode about one hundred miles in the pursuit and return, and all in thirty hours. The time, place, object and numbers considered, this expedition of Carson and Godey may be considered among the boldest and most disinterested which the annals of western adventure, so full of daring deeds, can present. Two men, in a savage wilderness, pursue day and night an unknown body of Indians into the defiles of an unknown mountain—attack them on sight without counting numbers—and defeat them in an instant—and for what? to punish the robbers of the desert, and revenge the wrongs of Mexicans whom they did not know. I repeat, it was Carson and Godey who did this—the former an *American*, born in Boone County, Missouri; the latter a Frenchman, born in St. Louis—and both trained to western enterprise from early life."

In the fall of 1845, Fremont started on his *third expedition*. His object was, if possible, to discover a new route to Oregon, south of the one usually traveled. But his expedition ultimately became diverted from its intended object by the breaking out of hostilities between the United States and Mexico, and he became

an active participant in the conquest of California, where he had arrived in January, 1846.

In June of 1847, he commenced his return to the United States across the country by the South Pass, in company with General Kearney, and other officers and privates, to the number of about forty. At Fort Leavenworth, on the Missouri frontier, he was arrested by General Kearney, tried, and condemned to lose his commission, on account of some alleged breach of military etiquette. The President, however, pronounced his pardon; but Fremont, in June (1848), resigned; maintaining that he had done no wrong, and desired no clemency.

The fourth and last expedition of Fremont was a private enterprise. His objects were multifarious, but he appears to have had in view, the discovery of a proper route for the great highway connecting the Mississippi with the Pacific. The termination of this expedition was disastrous to all concerned, the history of which has been given in two private letters of Fremont.

On the 25th of November, 1848, Fremont with his party, left the Upper Pueblo Fort, near the head of the Arkansas. They had upward of one hundred and thirty good mules, and one hundred and thirty bushels of shelled corn, intended as a support for their animals in the deep snows of the high mountains. The great error of the expedition appears to have been in engaging, as a guide, an old trapper, well known as "Bill Williams," who spent some twenty-five years of his life in trapping, in various parts of the Rocky Mountains. He proved never to have known, or to have entirely forgotten the country through which they were to pass.

"The 11th of December," says Fremont in his first letter, "we found ourselves at the mouth of the Rio del Norte canon, where that river issues from the Sierra San Juan—one of the highest, most rugged, and impracticable of all the Rocky Mountain ranges, inaccessible to trappers and hunters, even in summer. Across the point of this elevated range, our guide conducted us; and having great confidence in this man's knowledge, we pressed onward with fatal resolution. Even along the river bottoms, the snow was breast deep for the mules, and falling frequently in the valley, and almost constantly in the mountains. The cold was extraordinary. At the warmest hours of the most pleasant day, the thermometer stood at zero. Judge of the night and the storms!

"We pressed up through the summit, the snow deepening as we rose, and in four or five days of this struggling and climbing, all on foot, we reached the naked ridges which lie above the line of the timbered region, and which form the dividing heights between the Atlantic and Pacific Oceans. Along these naked heights it storms all winter, and the winds sweep across them with remorseless fury. On our first attempt to cross, we encountered a *poudrie*—dry snow driven thick through the air by violent wind, and in which objects are visible only a short distance—and were driven back, having some ten or twelve men variously frozen—face,

hands, or feet. The guide came near being frozen to death here, and dead mules were lying about the camp fires. Meantime, it snowed steadily. The next day (December) we renewed the attempt to scale the summit, and were more fortunate, it then seemed. Making mauls, and beating down a road or trench through the deep snow, we forced the ascent in spite of the driving *pouderie*, crossed the crest, descended a little, and encamped immediately below in the edge of the timbered region. The trail showed as if a defeated party had passed by—packs, pack-saddles, scattered articles of clothing, and dead mules strewn along. We were encamped about twelve thousand feet above the level of the sea. Westward the country was buried in snow. The storm continued. All movement was paralyzed. To advance with the expedition was impossible. To get back was impossible. Our fate stood revealed. We were overtaken by sudden and inevitable ruin. The poor animals were to go first.

“It was instantly apparent that we should lose every one. I took my resolution immediately, and determined to recross the mountain back to the valley of the Rio del Norte, dragging or packing the baggage by men. With great labor the baggage was transported across the crest to the head springs of a little stream leading to the main river. A few days were sufficient to destroy that fine band of mules. They would generally keep huddled together; and as they froze, one would be seen to tumble down and disappear under the driving snow. Sometimes they would break off, and rush down toward the timber until stopped by the deep snow, where they were soon hidden by the *pouderie*. The courage of some of the men began to fail.”

In this situation Fremont determined to send a party to New Mexico for provisions, and for mules to transport their baggage. King, Brackenridge, Creutzfeldt, and the guide, Williams, were selected for this purpose; the party being placed under the command of King. Now came on the *tedium* of waiting for the return of this relief party. Day after day passed, and no news from them. Snow fell almost incessantly in the mountains. The spirits of the camp grew lower. Life was losing its charms to those who had not reasons beyond themselves to live. Proue laid down in the trail and froze to death. In a sunshine day, and having with him the means to make a fire, he threw his blanket down on the trail, laid down upon it; and laid there till he froze to death!

Sixteen days passed away, and no tidings from the party sent for relief. Weary with delay and oppressed with anxiety, Fremont determined to go in person in search of the absent party and for relief in the Mexican settlements. Leaving the camp employed with the baggage, under the command of Vincent Haler, with injunctions to follow in three days, Fremont set off down the river with Godey, Preuss, and Saunders, a colored servant, leaving in camp provisions only for a few meals.

“On the sixth day after leaving camp,” says Fremont, “about

sunset, we discovered a little smoke in a grove of timber off from the river, and thinking it might be our express party (King and his men on their return), we went to see. This was the twenty-second day since that party had left us. We found them—three of them: Creutzfeldt, Brackenridge, and Williams—the most miserable objects I had ever beheld. I did not recognize Creutzfeldt's features when Brackenridge brought him up and told me his name. They had been starving. King had starved to death a few days before. His remains were some six or eight miles above, near the river. By the aid of the Indian horses, we carried these three with us down the valley, to the Pueblo on the Little Colorado, which we reached on the fourth day afterward, having traveled in snow and on foot one hundred and sixty miles. I looked upon the feelings which induced me to set out from the camp as an inspiration. Had I remained there, waiting the return of poor King's party, every man of us must have perished.

"The morning after reaching the Little Colorado Pueblo—horses and supplies not being there—Godey and I rode on to the Rio Hondo, and thence to Taos, about twenty-five miles, where we found what we needed; and the next morning, Godey, with four Mexicans, thirty horses or mules, and provisions, set out on his return to the relief of Vincent Halder's party."

Fremont waited in much anxiety for the successful return of those left behind, from the 17th of January until February 5, when Vincent Halder came in. In a subsequent letter, written the next day at Taos, some eighty miles north of Santa Fe, he gives the following account of the terrible calamities that befell those that were left behind:

"You will remember that I left in the camp twenty-three men, when I set off with Godey, Preuss, and my servant, in search of King and succor, with directions about the baggage, and with occupation sufficient to employ them about it for three or four days; after which they were to follow me down the river. Within that time I expected relief from King's party, if it came at all. They remained seven days and then started, their scant provisions about exhausted, and the dead mules on the western side of the great *Sierra*, buried under snow.

"Manuel—you will remember Manuel, a Christian Indian of the Cosumne tribe, in the valley of the San Joaquin—gave way to a feeling of despair, after they had moved about two miles, and begged Vincent Halder, whom I had left in command, to shoot him. Failing to find death in that form, he turned and made his way back to camp, intending to die there. The party moved on, and at ten miles Wise gave out, threw away his gun and blanket, and at a few hundred yards further, fell over into the snow and died. Two Indian boys, countrymen of Manuel, were behind. They came upon him, rolled him up in his blanket, and buried him in the snow on the bank of the river.

"No other died that day. None the next.

“Carver raved during the night—his imagination wholly occupied with images of many things which he fancied himself to be eating. In the morning he wandered off, and probably soon died. He was not seen again. Sorel on this day—the fourth from camp—laid down to die. They built him a fire, and Morin, who was in a dying condition, and snow-blind, remained with him. These two probably did not last until the next morning. That evening—I think it was—Hubbard killed a deer. They killed here and there a grouse, but nothing else, the deep snow in the valley having driven off the game. The state of the party became desperate, and brought Haler to the determination of breaking it up, in order to prevent them from living upon each other. He told them that he had done all that he could for them—that they had no other hope remaining for them than the expected relief—and that the best plan was to scatter and make the best of their way, each as he could, down the river; that for himself, if he was to be eaten, he would at all events be found traveling when he did die. The address had its effect. They accordingly separated.

“With Haler, continued five others—Scott, Hubbard, Martin, Bacon, Roher, and the two Cosumne boys. Roher now became despondent and stopped. Haler reminded him of his family and urged him to try and hold out for their sake. Roused by this appeal to his tenderest affections, the unfortunate man moved forward, but feebly, and soon began to fall behind. On a further appeal he promised to follow and to overtake them at evening. Haler, Scott, Hubbard, and Martin now agreed that if any of them should give out, the others were not to wait for him to die, but to push on and try to save themselves. Soon this mournful covenant had to be kept. At night Kerne's party encamped a few hundred yards from Haler's, with the intention, according to Taplin, of remaining where they were until the relief should come, and in the meantime to live upon those who had died and upon the weaker ones as they should die. With this party were the three brothers Kerne, Chaplin, Cathcart, McKie, Andrews, Stepperfeldt, and Taplin.

“Ferguson and Beadle had remained together behind. In the evening, Roher came up and remained in Kerne's party. Haler learnt afterward from some of the party, that Roher and Andrews wandered off the next morning and died. They say they saw their bodies. Haler's party continued on. After a few hours, Hubbard gave out. According to the agreement, he was left to die, but with such comfort as could be given him. They built him a fire, and gathered him some wood, and then left him—without turning their heads, as Haler says, to look at him as they went off.

“About two miles further, Scott—you remember him, he used to shoot birds for you on the frontier—he gave out. He was another of the four who had covenanted against waiting for each other. The survivors did for him as they had done for Hubbard, and passed on.

“In the afternoon, the two Indian boys went ahead—blessed be these boys!—and before nightfall met Godey with the relief. He had gone on with all speed. The boys gave him the news. He fired signal guns to notify his approach. Haler heard the guns and knew the crack of our rifles, and felt that relief had come. This night was the first of hope and joy. Early in the morning, with the first gray light, Godey was in the trail, and soon met Haler with the wreck of his party slowly advancing. I hear that they all cried together like children—these men of iron nerves and lion hearts when dangers were to be faced or hardships to be conquered! They were all children in this moment of melted hearts. Succor was soon dealt out to these few first met, and Godey with his relief, accompanied by Haler who, turning back hurriedly, followed the back trail in search of the living and the dead scattered in the rear. They came to Scott first. He was alive, and is saved! They came to Hubbard next. He was dead, but still warm. These were the only ones of Haler’s party that had been left. From Kerne’s party, next met, they learnt the deaths of Andrews and Roher; and a little further on, met Ferguson, who told them that Beadle had died the night before. All the living were found and saved, Manuel among them—which looked like a resurrection—and reduced the number of the dead to TEN—one-third of the whole party, which a few days before was scaling the mountain with me, and battling with the elements twelve thousand feet in the air.

“How rapid are the changes of life! A few days ago, and I was struggling through snow in the savage wilds of the Upper Del Norte—following the course of the river in more than Russian cold, no food, no blanket to cover me in the long frozen nights—uncertain at what moment of the night we might be roused by the Indian rifle—doubtful, very doubtful, whether I should ever see you or friends again. Now, I am seated by a comfortable fire, alone, pursuing my own thoughts, writing to you in the certainty of reaching you—a French volume of Balzac on the table—a colored print of the landing of Columbus before me—listening in safety to the raging storm without!

“You will wish to know what effect the scenes I have passed through have had upon me. In person none. The destruction of my party and the loss of friends are causes of grief, but I have not been injured in body or mind. Both have been strained and severely taxed, but neither hurt. I have seen one or the other, and sometimes both, give way in strong frames, strong minds, and stout hearts; but as heretofore, I have come out unhurt. I believe that the remembrance of friends sometimes gives us a power of resistance which the desire to save our own lives could never call up.”

In about a fortnight after writing the foregoing account, Fremont made up a party at Santa Fe, and started for California overland by the old Gila route, where he arrived early in the succeeding spring, his family having preceded him by the Panama route.

THE HUNTER'S ESCAPE.

Those who have not experienced them, can have but inaccurate ideas of the terrible storms that at times prevail in the plains and mountains of the Far West, and of the sufferings that they often bring upon the unfortunate emigrants and hunters that come within the region of their influence. A traveler describes one of unusual severity, which he encountered in the winter of 1846-7, near the base of the Rocky Mountains, in the vicinity of the Pueblo Fort, on the headwaters of the Arkansas, and in which, as will be seen in the following narration, he narrowly escaped perishing.

As we were now within twenty miles of the Pueblo Fort, Morgan, who had enough of it, determined to return, and I agreed to go back with the animals to the *cache*, and bring in the meats and packs. I accordingly tied the blanket on a mule's back, and leading the horse, trotted back at once to the grove of cotton-woods, where we before had encamped.

The sky had been gradually overcast with leaden-colored clouds until, when near sunset, it was one huge inky mass of rolling darkness. The wind had suddenly lulled, and an unnatural calm, which so surely heralds a storm in these tempestuous regions, succeeded. The ravens were winging their way toward the shelter of the timber, and the coyote or prairie wolf was seen trotting quickly to cover, conscious of the coming storm. The black threatening clouds seemed gradually to descend until they kissed the earth, and already the distant mountains were hidden to their very bases. A hollow murmuring swept through the bottom, but as yet not a branch was stirred by the wind; and the huge cotton-woods, with their leafless limbs, loomed like a line of ghosts through the heavy gloom.

Knowing but too well what was coming, I turned my animals toward the timber, about two miles distant. With pointed ears and actually trembling with fright, they were as eager as myself to reach the shelter; but before we had proceeded a third of the distance, with a deafening roar, the tempest broke upon us. The clouds opened and drove right in our faces a storm of freezing sleet, which froze as it fell. The first squall of wind carried away my cap, and the enormous hailstones beating on my unprotected head and face, almost stunned me. In an instant my hunting-shirt was soaked, and, as instantly, frozen hard, and my horse was a mass of icicles. Jumping off my mule—for to ride was impossible—I tore off the saddle-blanket and covered my head. The animals, blinded with the sleet, and their eyes actually coated with ice, turned their tails to the storm, and blown before it, made for the open prairie. All my exertions to drive them to the shelter of the timber were useless. It was impossible to face the hurricane, which now brought with it clouds of driving snow; and perfect darkness soon set in. Still the animals kept on, and I determined not to leave them, following, or rather being blown after them

My blanket, frozen stiff like a board, required all the strength of my numbed fingers to prevent it from being blown away, and although it was no protection against the intense cold, I knew it would, in some degree, shelter me at night from the snow.

In half an hour the ground was covered with snow on the bare prairie to the depth of two feet, and through this I floundered for a long time before the animals stopped. The prairie was as bare as a lake; but one little tuft of greasewood bushes presented itself, and here, turning from the storm, they suddenly stopped and remained perfectly still. In vain I again attempted to turn them toward the direction of the timber; huddled together, they would not move an inch; and exhausted myself, and seeing nothing before me but, as I thought, certain death, I sank down immediately behind them, and covering my head with the blanket, crouched like a ball in the snow. I would have started myself for the timber, but it was pitchy dark; the wind drove clouds of frozen snow into my face; and the animals had so turned about in the prairie, that it was impossible to know the direction to take; and although I had a compass with me, my hands were so frozen that I was utterly unable, after repeated attempts, to unscrew the box and consult it. Even had I reached the timber, my situation would scarcely have been improved, for the trees were scattered wide about over a narrow space, and consequently afforded but little shelter; and even if I had succeeded in getting firewood—by no means an easy matter at any time, and still more difficult now that the ground was covered with three feet of snow—I was utterly unable to use my flint and steel to procure a light, since my fingers were like pieces of stone, and entirely without feeling.

The way the wind roared over the prairie that night; how the snow drove before it, covering me and the poor animals partly; and how I lay there, feeling the very blood freezing in my veins, and my bones petrifying with the icy blasts which seemed to penetrate them; how for hours I remained with my head on my knees, and the snow pressing it down like a weight of lead, expecting every instant to drop into a sleep from which I knew it was impossible I should ever awake; how every now and then the mules would groan aloud, and fall down upon the snow, and then again struggle on their legs; how all night long the piercing howl of wolves was borne upon the wind, which never for an instant abated its violence during the night—I will not attempt to describe. I have passed many nights alone in the wilderness; and, in a solitary camp, have listened to the roarings of the wind and the howling of wolves, and felt the rain or snow beating upon me with perfect unconcern; but this night threw all my former experiences into the shade, and is marked with the blackest of stories in the memoranda of my journeyings.

Once, late in the night, by keeping my hands buried in the breast of my hunting-shirt, I succeeded in restoring sufficient feeling into them to enable me to strike a light. Luckily my pipe,

which was made out of a huge piece of cotton-wood bark, and capable of containing at least twelve ordinary pipesful, was filled with tobacco to the brim; and this, I do believe, kept me alive during the night; for I smoked and smoked, until the pipe itself caught fire and burned completely to the stem.

I was just sinking into a dreamy stupor, when the mules began to shake themselves, and sneeze and snort, which hailing as a good sign, and that they were still alive, I attempted to lift my head and take a view of the weather. When, with great difficulty, I raised my head, all appeared as dark as pitch, and it did not at first occur to me that I was buried deep in snow; but when I thrust my arm above me, a hole was thus made, through which I saw the stars shining in the sky, and the clouds fast clearing away. Making a sudden attempt to straighten my almost petrified back and limbs, I rose, but unable to stand, fell forward in the snow, frightening the animals, which immediately started away. When I gained my legs, I found that day was just breaking, a long gray line of light appearing over the belt of timber on the creek, and the clouds gradually rising from the east, and allowing the stars to peep from patches of the blue sky. Following the animals as soon as I gained the use of my limbs, and taking a last look at the perfect cave from which I had just arisen, I found them in the timber, and, singular enough, under the very tree where we had *cached* our meat. However, I was unable to ascend the tree in my present state, and my frost-bitten fingers refused to perform their offices; so that I jumped upon my horse, and, followed by the mules, galloped back to the Arkansas, which I reached in the evening, half dead with hunger and cold.

The hunters had given me up for lost, as such a night even the "oldest inhabitants" had never witnessed. My late companion had reached the Arkansas, and was safely housed before it broke, blessing his lucky stars that he had not gone back with me. The next morning he returned and brought in the meat; while I spent two days in nursing my frozen fingers and feet, and making up in feasting mountain fashion for the hardships I had suffered.

THE INDIANS OF THE GREAT PRAIRIE WILDERNESS.

THERE are about one hundred and thirty-five thousand Indians inhabiting the Great Prairie Wilderness, of whose social and civil condition, manners and customs, we give a brief account. First, we speak of those who reside in the Indian Territory, six hundred miles north and south, and extending along the frontiers of the Western States—which immense tract has been purchased of the wild tribes by the United States Government, for a permanent abiding-place for the emigrating Indians of the settled part of the Union—as a spot where they could be free from those contaminating

influences that conspired to their ruin while residing near the settlements of the whites. It is an admirable location for this purpose; its soil is generally exceedingly fertile, with excellent water, fine timber on the streams, mines of iron and lead ore and coal. Thither, for the last forty years, the government has been inducing the Indians within the jurisdiction of the States to emigrate, until near eighty thousand have moved on to the lands thus assigned them.

Government has been very liberal to them. It purchases the land which the emigrating tribes leave; gives them others within the new territory; transports them; erects a portion of their dwellings; plows and fences a portion of their fields; furnishes them teachers of agriculture and implements of husbandry, horses, cattle, etc.; erects schoolhouses, and supports teachers in them the year round; and makes provision for the subsistence of the new emigrants, and uses every effort for the promotion of their moral and physical welfare.

Considering that the ordinary system of government, of chieftaincies among the tribes, prolific of evil, the United States use all the means in their power to abolish them—making the rulers elective—establishing a form of government in each tribe similar to our State governments, and endeavoring to unite the tribes under a general government, like that at Washington. Accordingly a beautiful spot, centrally situated, has been selected on Osage River, about seven miles square, sixteen miles distant from the Missouri line, as a suitable place for the central government. Any member of those tribes that come into the confederation, may own property in the district and no other.

The Choctaws number about twenty thousand, which includes six hundred negro slaves and two hundred white men, married to Choctaw women. They reside in the extreme south of the territory, on a tract capable of producing most abundant crops of corn, flax, hemp, tobacco, cotton, etc., and sustaining a population as dense as that of England. They are improving in comfort and civilization, have fine farms, well stocked, cotton gins, looms, flouring mills, etc. They have a written constitution similar to that of the United States, which divides the government into four departments—legislative, executive, judicial and military, together with a National Assembly, which meets annually on the first Monday in October. The Chickasaws, numbering fifty-five hundred, including their slaves, are merged in the Choctaws, and are wealthy from the sales of their lands east of the Mississippi, to the United States. They have a large fund applicable to various objects of civilization, ten thousand dollars of which is annually applied to education, and the Choctaws also have six thousand dollars annually applied to the same object.

The Cherokees, including nine hundred slaves, number twenty-two thousand. They, like the above, own fine farms, with lead mines and salt works, where they manufacture one hundred bushels

of salt per day, and have a form of government similar to the Choctaws. Their dwellings are log, with frequently stone chimneys and plank floors, and furnished as well as those of settlers in the new countries; and they have good taverns for the accommodation of strangers. Their form of government is similar to the above, and their permanent school fund amounts to \$200,000. In 1850, they had no less than twenty-two different schools, where over a thousand children were taught the common branches, including history. Of these, one hundred and twenty were orphans, who were boarded and clothed at the expense of the Orphan's Fund.

The Creeks number twenty-two thousand five hundred, including three hundred and ninety-three slaves; included with them are sixteen hundred Seminoles. In point of civilization and educational advantages, their situation is similar to the Choctaws and Cherokees, though their form of civil government is less perfect.

The Senecas, and Shawanees with them, number four hundred and sixty-one, and are, in a measure, civilized—speak good English, and live in as much comfort as the others spoken of. The other emigrated tribes, are the Pottawatomies; the Iowas; the Weas; the Piankashaws; the Peorias and Kaskaskias; the Ottawas; the Shawanees; the Delawares; the Kickapoos and the Wyandots; the Sacs and Foxes; none of which, with the exception of the first two named, number one thousand souls. They are all, however, more or less civilized, and receive the annuities from the general government.

There is scarcely anything the Indian tribes have to encounter so seriously fatal to their improvement as intemperance; of this they are conscious themselves, and most of the emigrant tribes have adopted measures for its prohibition with various degrees of success. Among the Choctaws a law was passed upon this subject, which was measurably successful; and the spirit which effected its passage was worthy of the most exalted state of civilization. It seems that the tribe had generally become sensible of the pernicious influences of strong drink upon their prosperity, and had, in vain, attempted various plans for its suppression. At last, a council of the head men of the nation was convened, and they passed a law by acclamation, that each and any individual who should, henceforth, *introduce* ardent spirits into the nation, should be punished with a hundred lashes on his bare back. The council adjourned, but the members soon began to canvass among themselves the pernicious consequences which might result from the protracted use of whisky *already* in the shops, and therefore concluded the quicker it was drank up, the more promptly the evil would be over, so falling to, in less than two hours Bacchus never mustered a drunker troop than were these same temperance legislators. The consequences of their determination were of lasting importance to them. The law, with some slight improvements, has since been vigorously enforced.

There are about 22,000 Indians, of native tribes, who reside in the Indian Territory, and who receive annuities from the United States. They are the Pawnees, the Sioux, the Quapaws, the Kansas, Ottoes, Omahoes, and the Ponsars. The Pawnees number 10,500, and the Osages, 5,500; the others are much less in number, and all are in a degraded condition.

These are the native and emigrant Indians within the Indian Territory, with their several conditions and circumstances briefly stated. It should be mentioned, however, that one or more of the emigrant tribes have a newspaper among them, and that interspersed through them are many devoted missionaries of different denominations, who, amid more or less of privation, are laboring with all zeal for the promotion of their temporal and spiritual welfare.

The other Indians in the Great Prairie Wilderness, will be briefly noticed under two divisions—those living *South*, and those living *North* of the Great Platte River.

South of the Great Platte, are no tribes of note out of New Mexico, except the Camanches, who number about 20,000. They are a warlike tribe and unexcelled as horsemen. Like the Arabs of the desert they never reside but a few days in a place; but travel north with the buffalo in summer, and, when winter comes on, return with them to the plains of Texas.

North of the Great Platte or Nebraska River, are the remains of fifteen or twenty tribes, who average about eight hundred each. The Sioux and the small-pox have thus reduced them. In the upper Mississippi country are the Sioux and Chippewas, both very powerful tribes.

Inhabiting the Rocky Mountains and vicinity are the Shoshonees or Snakes, the Arrapahoes, the Crows, and the Blackfeet. The two last named are very warlike. The Blackfeet, in 1828, numbered 15,000 souls, when, having stolen a blanket, that year, from the American Fur Company's steamboat on the Yellow Stone, one which had belonged to a man who had died of the small-pox on board, the infected article spread the disease among the whole tribe, and reduced their number to two-thirds.

They endeavored, for awhile, to bury the dead, but these were soon more numerous than the living. At last, those left alive fled to the mountains, mad with superstition and fear, where the pure air of the elevated vales restored the remainder of the tribe to health. But this infliction, which they believed to be an exhibition of the displeasure of the Great Spirit against them, has in nowise humanized their bloodthirsty nature.

In conclusion, we remark that none of the native tribes west of the Mississippi are as brave and warlike as those which inhabited the older States of the Union, as the Wyandots, the Shawanees, the Creeks, the Seminoles, the Cherokees, and the Iroquois. Nor, in general, do they burn their prisoners, or inflict upon them protracted tortures.

EFFECT OF SETTLEMENT ON THE CLIMATE OF THE WEST.

GREAT changes have taken place in the system of weather since the settlement of the western country, yet those changes have been so gradual, that it is no very easy task to recollect or describe them. At the first settlement of the country, the summers were much cooler than they are at present. For many years a single warm night rarely occurred during the whole summer. The evenings were cool, and the mornings frequently uncomfortably cold. The coldness of the nights was owing to the deep shade of the lofty forest trees, which everywhere covered the ground. In addition to this, the surface of the earth was still further shaded by large crops of wild grass and weeds, which prevented it from becoming heated by the rays of the sun during the day. At sundown the air began to become damp and cool, and continued to increase in coldness, until warmed by the sunshine of the succeeding day. This wild herbage afforded pasture for the cattle and horses, from spring until the onset of winter. To enable the owner to find his beasts, the leader of each flock of cattle, horses, and sheep, was furnished with a bell suspended to the neck by a leathern or iron collar. Bells, therefore, constituted a considerable article of traffic in early times.

One distressing circumstance resulted from the wild herbage of the wilderness. It produced innumerable swarms of gnats, mosquitoes, and horse-flies. Those distressing insects gave such annoyance to man and beast, that they may be justly ranked among the early plagues of the country. During that part of the season in which they were prevalent, they made the cattle poor, and lessened the amount of their milk. In plowing, they were very distressing to the horses. It was customary to build large fires of old logs about the forts, the smoke of which kept the flies from the cattle, which soon learned to change their position, with every change of wind, so as to keep themselves constantly in the smoke.

The summers in early times were mostly very dry. The want of rain was compensated in some degree by heavy dews, which were then more common than of late, owing to the shaded situation of the earth, which prevented it from becoming either warm or dry by the rays of the sun, during even the warmest weather.

Frost and snow set in much earlier in former times than of late. Hunting snows usually commenced about the middle of October. November was regarded as a winter month, as the winter frequently set in with severity during that month, and sometimes at an early period of it. For a long time after the settlement of the country there was an abundance of snow, in comparison to the amount we usually have now. It was no unusual thing to have snows from one to three feet in depth, and of long continuance, in the Valley of the Ohio. The depth of the snows, the extreme cold and length of the winters, were indeed distressing to

the first settlers, who were but poorly provided with clothing, and whose cabins were mostly very open and uncomfortable. Getting wood, making fires, feeding the stock, and going to mill were considered sufficient employment for any family, and truly those labors left them little time for anything else.

The springs were formerly somewhat colder, and accompanied with more snow than they are now, but the change in these respects is no way favorable to vegetation, as the latest springs are uniformly followed by the most fruitful seasons. It is a law of the vegetable world that the longer the vegetative principle is delayed, the more rapid when put in motion. Hence those northern countries which have but a short summer and no spring, are among the most fruitful countries in the world. In Russia, Sweden, and Denmark the transition from winter to summer occupies but a very few days; yet a failure of a crop in those countries is but a rare occurrence: while in these latitudes, vegetation prematurely put in motion, and then often checked "by the lagging rear of winter's frost," frequently fails of attaining its ultimate perfection.

From this history of the system of the weather of early times, it appears that the seasons have already undergone great and important changes. The summers are much warmer, the falls much milder and longer, and the winters shorter, by at least one month, and accompanied with much less snow and cold than formerly. What causes have effected these changes in the system of weather, and what may we reasonably suppose will be the ultimate extent of this revolution, already so apparent?

In all countries, the population of a desert by a civilized and agricultural people, has had a great effect on its climate. Italy, which is now a warm country, with very mild winters, was in the time of Horace and Virgil, as cold and as subject to deep snows as the western country was at its first settlement. Philosophy has attributed the change of the seasons in that country, to the clearing of its own forests, together with those of France to the north, and those of Germany to the east and north of Italy. The same cause has produced the same effect in our country. Every acre of cultivated land must increase the heat of our summers, by augmenting the extent of the surface of the ground denuded of its timber, so as to be acted upon, and heated by the rays of the sun.

The future prospect of the weather, throughout the whole extent of the western country, is not very flattering. The thermometer in the hottest parts of the summer months already ranges from ninety to one hundred degrees. A frightful degree of heat for a country as yet but partially cleared of its native timber! When we consider the great extent of the Valley of the Mississippi, so remote from any sea to furnish its cooling breezes, without mountains to collect the vapors, augment and diversify the winds, and watered only by a few rivers, which in the summer time are diminished to a small amount of water, we have every data for the unpleasant conclusion that the climate of the western regions will

ultimately become intensely hot and subject to distressing calms and droughts of long continuance.

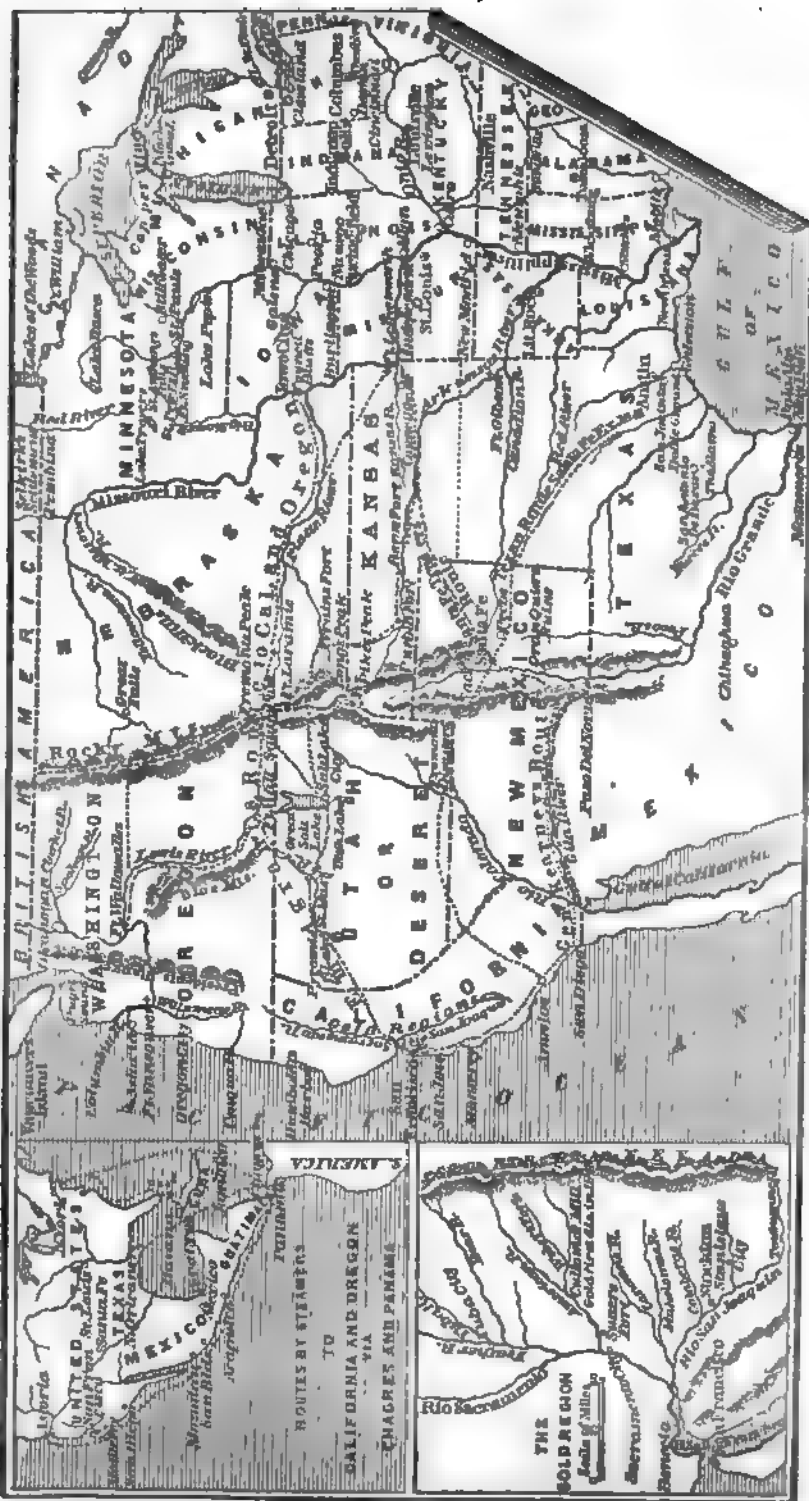

Already we begin to feel the effects of the increase of the heat of summer in the noxious effluvia of the stagnant water of the ponds and low grounds along the rivers. These fruitful sources of pestilential exhalations have converted large tracts of country into regions of sickness and death ; while the excessive heat and dryness of the settlements remote from the larger watercourses, have been visited by endemic dysenteries in their most mortal states. Thus the most fortunate regions of the earth have their drawbacks from their advantages which serve, in some degree, to balance the condition of their inhabitants with that of the people of countries less gifted by nature in point of soil, climate, and situation.

The conflict for equilibrium between the rarified air of the South and the dense atmosphere of the North, will continue forever the changeable state of weather in this country, as there is no mountainous barrier between us and the northern regions of our continent.

This is a detailed historical map of the United States and Mexico, showing state boundaries, major cities, rivers, and geographical features. The map includes insets for the Gulf of California and the Colorado River region. The title "UNITED STATES OF AMERICA" is prominently displayed at the top. The map shows the following states and territories:

- UNITED STATES OF AMERICA:**
 - ALABAMA
 - ARIZONA
 - CALIFORNIA
 - CONNECTICUT
 - DELAWARE
 - FLORIDA
 - GEORGIA
 - ILLINOIS
 - INDIANA
 - KANSAS
 - KENTUCKY
 - LOUISIANA
 - MAINE
 - MARYLAND
 - MASSACHUSETTS
 - MICHIGAN
 - MINNESOTA
 - MISSISSIPPI
 - MISSOURI
 - MONTANA
 - NEBRASKA
 - NEVADA
 - NEW HAMPSHIRE
 - NEW JERSEY
 - NEW YORK
 - NORTH CAROLINA
 - NORTH DAKOTA
 - OHIO
 - OKLAHOMA
 - OREGON
 - PENNSYLVANIA
 - RHODE ISLAND
 - SOUTH CAROLINA
 - SOUTH DAKOTA
 - TENNESSEE
 - TEXAS
 - VERMONT
 - VIRGINIA
 - WASHINGTON
 - WEST VIRGINIA
 - WISCONSIN
 - WYOMING
- MEXICO:**
 - CHIHUAHUA
 - COAHUILA
 - DURANGO
 - GUERRERO
 - MICHOACÁN
 - MORELOS
 - NAYARIT
 - PUEBLA
 - QUINTANA ROO
 - SAN LUIS POTOSÍ
 - TAMAULIPAS
 - VERACRUZ
 - ZACATECAS

The map also shows major rivers such as the Mississippi, Missouri, Colorado, Rio Grande, and Sacramento. It includes numerous cities and towns, as well as geographical features like the Rocky Mountains, Sierra Nevada, and the Gulf of California. The map is oriented with North at the top.

HISTORICAL

AND

DESCRIPTIVE SKETCHES, ETC.

TEXAS.

TEXAS is an Indian word signifying "Friends." This country was first settled by M. La Salle, in 1685, who took formal possession in the name of the French monarch, and built a small fort at the head of Matagorda Bay. The colony was soon broken up by the savages. In the meantime, intelligence of the founding of this settlement having reached Mexico, a military force was sent by the Viceroy to drive out the French; but on its arrival the colonists had disappeared. In 1690, the Spaniards founded two small missions, and in 1692, commenced their first settlement at San Antonio de Bexar.

After the settlement of Louisiana, in 1699, the French assumed nominal possession of the territory as far west as the Bay of Matagorda. Hostilities arose between them and the Spaniards, who established several posts in the eastern part of Texas, and drove out the French. The conflicting claims of the two nations to Texas, were temporarily settled by the treaty of 1763, in which France ceded to Spain all of Louisiana west of the Mississippi. In 1800, Spain having ceded Louisiana back to France, left the question again open as to the rightful claim to the country. In 1803, Louisiana having been ceded by France to the United States, transferred to the American nation the same claim to Texas, which, however, was never enforced.

In 1810, at the commencement of the first Mexican revolution, Texas had not any settlements of note, except those of San Antonio de Bexar, Goliad, and Nacogdoches. In the interior were a few Spanish forts and missions, around each of which were a small number of miserable Indian converts. Some of these missionary establishments, each consisting of a massive stone fortress and a church, still remain with their walls almost entire.

The Mexicans seemed not so desirous to occupy this country as to keep it a desolate waste, to form an impassable barrier between them and their Anglo-Saxon neighbors, toward whom and other civilized nations their jealousy was so strong, that they enacted a law making it death for a foreigner to enter any of the Spanish

provinces without a license from the Spanish king. Hence, until after the breaking out of the Mexican revolution, Texas remained almost wholly unknown to the Americans.

In 1812, Dons Guttierrez and Toledo, officers of the revolutionists, formed a project to invade the eastern provinces of Mexico, with the aid of American volunteers. They succeeded in raising a force of about four hundred and fifty men, near one half of whom were Americans from the southwestern States, and the remainder French, Spaniards and Italians. They were led by officers Magee, Kemper, Locket, Perry, and Ross. Crossing the Sabine, they routed a body of royalists near Nacogdoches, and took possession of Goliad. In the following winters (1812-13) they were besieged by two thousand Spaniards. The revolutionists sallied from the town and routed the Spaniards with a loss of about four hundred in killed and wounded. The latter retreated, and were again defeated near Bexar, to which they retreated, and soon after surrendered. Twelve of the principal Spanish officers, after their surrender, were secretly massacred by Guttierrez, which becoming known to the Americans, most of them, with Kemper at their head, abandoned the service in disgust.

The invaders, thus reduced in numbers, remained at Bexar. In June, a Spanish army of four thousand men having approached toward the place, the garrison advanced against them and routed them, four miles west of the town, with a loss in killed and wounded nearly equal to their own number.

Guttierrez having been removed from the supreme command as a punishment for his agency in the massacre, he was succeeded by Toledo, when Kemper returned to Bexar from the United States with four hundred Americans. In August, an army of several thousand strong advanced toward the place. The garrison, one thousand one hundred in number, marched out nine miles to the Medina River, and gave them battle. They drove the enemy to their intrenchments, where half their force was in reserve, when a heavy fire being poured in upon them the Mexican revolutionists fled, and the Americans, after a desperate resistance, were nearly all killed in the battle or captured in the subsequent flight toward the American frontier. This total defeat, for five years, suspended the Mexican revolutionary struggle in Texas.

After this event the United States, acting upon strictly neutral principles toward the contending parties in Mexico, interposed its authority and prevented hostile expeditions from crossing the frontiers. Individuals in small parties, however, visited Texas, and brought back with them glowing description of its fertility and resources. To accommodate privateers under the Mexican flag, the revolutionists formed stations at Matagorda, Galveston, and other points, which, becoming piratical establishments, were broken up by the United States.

The war in Mexico, called "the first revolution," after a duration of eight years, terminated in favor of the royalists. "The

second revolution" was commenced in 1821 by the Mexican general, Iturbide, under whom the Mexicans achieved their independence of Spain. Iturbide made himself a monarch, but the people, wishing for a republic, deposed and banished him, and on his return, had him executed. Another leader arose, Santa Anna, under whose auspices a federal constitution was formed in 1824, by which Mexico, like our republic, was divided into States, with each a legislature, and over the whole a general government.

The treaty of 1819, by which Spain ceded Florida to the United States, established the Sabine as the western boundary of Louisiana.

Moses Austin, a native of Durham, Connecticut, applied for and received, in 1819, a grant of land in Texas to plant a colony. The Spanish authorities in Mexico, desirous of defense against the fierce and hostile Camanches, had, contrary to their usual policy, made laws favoring American emigration on the condition, however, that the emigrants should become Catholics and teach the Spanish language in their schools.

Moses Austin dying, his son, Stephen, carried out his plans, and founding a colony between the Brazos and Colorado, thus became the leader of American colonization in Texas. Austin's enterprise being joined by others, his colony soon attracted the attention of the Mexican clergy. They found that the law which required the settlers to make oath that they were Catholics, and to establish Spanish schools, had been regarded by them as an unmeaning formality; and they felt the utmost alarm at a colony of foreign heretics being planted among them, and desired that they should either submit to the law or be routed out. Fresh jealousies arose in consequence of the futile attempts made by a few of the settlers in the vicinity of Nacogdoches, in 1826, to throw off the Spanish yoke and establish a republic by the name of Fredonia. This ill-feeling was further increased by propositions made from time to time by the United States to purchase Texas. In whatever was done, the Mexicans fancied some plot against them, in which the American nation at large was concerned. They even surmised that the settlers in Texas were sent but as a cover to a concealed purpose of the American authorities to take their territory and destroy their nationality.

Texas, under the constitution of 1824, was united in one State with the adjacent province of Coahuila. The Spanish Mexicans of this province outvoted and pursued an oppressive policy against the Texans. In 1833, Stephen F. Austin was sent to the City of Mexico to petition against these grievances, and for the privilege of forming Texas into a separate State. Being treated with neglect by the Mexican Congress, he wrote a letter to the Texans, advising them, at all events, to proceed in forming a separate State Government. This letter falling into the hands of the Mexican authorities, he was made prisoner while returning, carried back to Mexico, and thrown into a dungeon.

Meanwhile the crafty Santa Anna, subverting the constitution of 1824, became a military tyrant; and to direct attention from his lawless acts, commenced a series of oppressions directed against the Texans, and placing the civil rulers there in subjection to the military. In 1835, Austin having returned from his imprisonment in Mexico, vigilance committees were appointed throughout the country, and the people were resolved to insist upon their rights under the constitution. At this time the population of Texas was near 20,000, of whom scarce 3000 were Mexicans.

Appeals were made through the press to the Texan people, and arrangements were set on foot to raise men and money for the purpose of defending themselves against a threatened invasion by Santa Anna. The first hostile movement of the Mexicans was directed against the town of Gonzalez. One thousand Mexicans having been sent there to demand a field-piece, the Texans, on the 2d of October, 1835, attacked and drove them from the ground with loss. On the 8th of October, Goliad was taken by the Texans with valuable munitions. On the 28th, ninety-two Texans, under Colonels Bowie and Fannin, defeated four hundred Mexicans, below Bexar, with a loss of nearly one hundred in killed and wounded; the Texan loss being simply one killed.

In November, the Texan Convention of Delegates assembled at San Felipe, issued a declaration of rights, and established a provisional government. Henry Smith was chosen governor, and Samuel Houston, commander-in-chief.

On the 11th of December, five hundred Texans, after a bloody siege and assault, took the strong fortress of the Alamo and the city of San Antonio de Bexar. This was a gallant enterprise; the Mexicans numbered 1000 regular troops, under General Cos. Almost every house was in itself a fortress, each being built of stone, with walls three feet in thickness. The bulk of the garrison was posted in the public square, the approaches to which were strongly fortified by breastworks mounted with artillery. At three o'clock on the morning of the 5th of December, Colonel Neil, with two hundred men, commenced a false attack upon the Alamo; while, with three hundred volunteers, the heroic Milam, the projector of the plan about to be described, having provided his men with crowbars and other forcing implements, effected an entrance into the suburbs, and amidst a heavy shower of grape-shot and musketry, took possession of two houses. For four days the Texans, bravely maintaining their position, continued to advance from one point to another, breaking a passage through the stone walls of the houses, and opening a ditch and throwing up a breastwork, where they were otherwise unprotected, while every street was raked by the enemy's artillery. On the third day of the assault, the gallant Milam received a rifle-shot in his head, but otherwise their loss was trifling, while that of the enemy was severe, as the rifle brought them down as often as they showed their faces at a loop-hole. On the fourth day, the Mexicans were

reinforced by three hundred men. On the following night, the Texans penetrated to a building which commanded the public square; but ere the daylight dawned to give them the benefit of rifle practice, the Mexicans hauled down their black and red flag which had been waving from the Alamo during the contest in token of no quarter, and sent in a flag of truce to signify their desire to surrender.

Unhappily at this time divisions prevailed in the Texan councils, and no adequate force had been raised to oppose Santa Anna, who, in February, appeared before Bexar with an overwhelming force. On their appearance, the Texan force, numbering only one hundred and fifty men, under William B. Travis, retired to the Alamo, where were a few pieces of artillery. The enemy encircled the Alamo with intrenched encampments, and kept up a continued bombardment for several days.

With the exception of thirty-two volunteers from Gonzalez, who made their way into the fort on the morning of the 1st of March, no succor arrived to the garrison, whose physical energies were worn down by constant watching, but whose resolution was unsubdued. In the language of the heroic Travis, they were determined "never to surrender, nor retreat." In the meantime, the reinforcements of the enemy had increased to 4000 strong; and humiliated at being baffled by less than two hundred men in a two weeks' siege to reduce a poorly fortified place, Santa Anna, after midnight on the 6th of March, surrounded the Alamo, determining to carry it by storm at any cost.

They advanced amid the discharge of musketry and cannon, and were twice repulsed in their attempts to scale the walls. A third attempt was made by the exertions of their officers, when borne onward by those in their rear, they tumbled over the walls "like sheep." Then commenced the last struggle of the garrison. Travis received a shot as he stood on the walls cheering his men. As he fell, a Mexican officer rushed forward to dispatch him, when Travis, summoning his failing powers for a last effort, met his assailant with an upward thrust of his sword, and they both expired together. Unable from the crowd and for want of time to load, the Texans clubbed their rifles, and continued to fight and resist until life had ebbed out through numberless wounds, and the enemy had conquered the Alamo, but not its heroic defenders. They perished but yielded not; one only remained to ask for quarter, which was denied him by the unrelenting enemy. Total extermination succeeded, and the darkness of death reposed over the memorable Alamo. Of all the persons in the place, Mrs. Dickerson and her child and a negro were alone spared.

The storming lasted less than an hour. Major Evans was shot while setting fire to the magazine according to the order of Travis. David Crockett was found dead, surrounded by a pile of the enemy, who had fallen beneath his powerful arm. Colonel Bowie (the inventor of the bowie-knife), who was confined by sickness, was

murdered in his bed. The enemy, exasperated to the highest degree by this desperate resistance, treated the bodies with brutal indignation. Santa Anna, when the body of Major Evans was pointed out to him, drew his dirk and stabbed it twice in the breast. General Cos with his sword mangled the face and limbs of the heroic Travis with the malignancy of a savage. The bodies were finally stripped, thrown into a heap, and buried. The loss of the Mexicans on this occasion has been variously estimated at from 1000 to 1500. Never in the world's history had defense been more heroic; it has scarce been equaled, save at the Pass of Thermopylæ.

On the 2d of March, 1836, the Texan delegates assembled at Washington, unanimously agreed to a declaration of independence, and constituted Texas an independent republic. On the 17th of the same month, they adopted a Constitution, and appointed David G. Burnett, Provisional President.

While Santa Anna was concentrating his forces at San Antonio de Bexar, another division of the forces under General Urrea, proceeded along the line of the coast. Col. Fannin, then at Goliad, learning of the advance of the Mexican army, sent fourteen men about twenty-five miles distant, under Captain King, to remove some families to a place of safety. They lost their way in the prairie and were taken prisoners and shot by Urrea. Colonel Fannin having received no tidings from King, sent out Colonel Ward with a larger detachment, who falling in with the enemy, had two engagements with him; in the last, overwhelmed by numbers, he was obliged to surrender.

On the 18th, Fannin's force being reduced to two hundred and seventy-five men, he left Goliad and commenced retreating toward Victoria; and on that afternoon was overtaken on a prairie and surrounded by the Mexican infantry, and some Indian allies. The Texans, arranging themselves in a hollow square, successfully repelled all charges. At dusk, the Indians, by command of Urrea, threw themselves upon the ground, and under cover of the tall grass crawled up and poured in a destructive fire upon the Texans. As soon as it was sufficiently dark to discern the flashes of their guns, the Texans soon picked them off and drove them back. The Mexicans withdrew and encamped for the night, having lost about five hundred men. The Texan loss was seven killed, and about sixty wounded.

The Texans threw up a breastwork during the night; but when morning dawned, discovered that their labor had been useless, for Urrea was joined by five hundred fresh troops with artillery. Upon this, Fannin seeing the inutility of farther resistance against an army ten times his superior, surrendered on condition that they should be treated as prisoners of war. The Texans were marched back to Goliad, where, with the prisoners of Ward's detachment, they numbered four hundred men. In a few days orders were received from Santa Anna for their execution, which, on the

morning of the 27th of March were obeyed; four surgeons and three laborers only being spared.

Escorted by a strong Mexican guard, they were marched out from their quarters under various pretexts, and after advancing a few hundred yards, were ordered to halt, throw off their blankets and knapsacks, and sit down with their backs to the guard. Ere they had time to obey it, volleys of musketry were poured in upon them, and those who escaped the bullets, were cut down by the swords of the cavalry. A few escaped by springing over a brush fence, and concealing themselves in a thicket. What rendered this butchery more aggravating, was, that when led to their execution, the minds of the men were cheered by the promise of being speedily liberated and sent home.

A prisoner who escaped, relates, that just before the Mexicans fired upon them, a young man named Fenner, sprang to his feet, and exclaimed, "Boys, they are going to kill us—die with your faces to them, like men!" At the same moment, two other young men, flourishing their caps over their heads, shouted at the top of their voices, "Hurrah for Texas!" Fannin, who was murdered apart from his men, requested to be shot in the breast, and not in the head. He tied a handkerchief over his eyes, and with his hands opened his bosom to receive the balls. The next day he was seen lying on the prairie among a heap of the dead, with the fatal wound in the head.

Santa Anna now deemed that the Texans were subdued. The bones of the greater part of the Texans, who had been distinguished for their bravery, were bleaching upon the prairies, and nearly every seaport in Texas was under Mexican dominion.

As soon as the fall of the Alamo and the butchery of Fannin's men was known in the United States, a spirit of stern revenge was aroused among the hardy population of the West, and volunteers poured in to assist in driving every Mexican soldier beyond the Rio Grande.

On the 21st of April, the main Texan army under General Houston, seven hundred and eighty-three strong, met the advance of the Mexicans under Santa Anna, sixteen hundred in number, near the San Jacinto. With the exception of the artillery, not a gun was fired by the Texans until they had come close to the lines of the enemy, when they rushed on with the dreadful war-cry, "*Remember the Alamo!*" Driven to a frenzy of fury by its thrilling recollections, and the knowledge that the murderers of Fannin's men were before them, they threw themselves with such a desperate charge upon the enemy, that the Mexicans, panic-stricken, threw down their arms and fled in wild dismay. Many of the poor Mexicans, as they were overtaken by the exasperated Texans, would fall on their knees and beg piteously for mercy, crying in broken English, "*me no Alamo! me no Alamo!*" The whole Mexican army was annihilated, scarce a soldier escaping. Eight hundred and thirty-eight were killed and wounded,

and the remainder made prisoners. So infuriated were the Texans, that the number of killed to the wounded, bore the unusual proportion of three to one. It was in fact, a massacre. The conquerors lost but eight men killed, and seventeen wounded.

The next day, Santa Anna was taken, disguised in a coarse dress, on the banks of a neighboring bayou. When brought into the presence of Houston, he was greatly agitated from fear that his life would be taken, and some opium was given him to quiet his nerves; after which, turning to Houston, he said, "You were born to no common destiny; you have conquered the Napoleon of the West." A majority of the Texans demanded his execution, for the murder of Fannin and his men, and it required extraordinary exertions on the part of Houston and his officers, to preserve him from their just vengeance.

As supreme ruler of Mexico, Santa Anna by a treaty, acknowledged the independence of Texas with the Rio Grande as their western boundary. Although the United States, England, and other powers, acknowledged her independence, yet Mexico, through all her changes of rulers, ever claimed the country, and occasionally sent troops to renew the war by predatory excursions.

Santa Anna meantime procured himself to be sent by the Texans to the United States, where he so far gained President Jackson's favor, as to be returned by him to Mexico, where disavowing all his former treaties and professions, he again entered upon a course of hostilities against the Texans.

In 1841, President Lamar organized what has been termed, the "Santa Fe expedition," the object of which was, to open a trade with Santa Fe, and to establish Texan authority, in accordance with the treaty of Santa Anna, over all the territory east of the Rio Grande. Santa Fe lying east of that river, was still in possession of the Mexicans. On the 18th of June, the expedition, numbering three hundred and twenty-five men under General M'Leod, left Austin, the capital of Texas, and after a journey of about three months, arrived at the Spanish settlements in New Mexico. They were intercepted by a vastly superior force, and surrendered on condition of their being allowed to return; but instead of this, they were bound with ropes and leather thongs, in gangs of six or eight, stripped of most of their clothing, and marched to the city of Mexico, a distance of twelve hundred miles. On their route, they were treated with cruelty, beaten and insulted; forced to march at times by night, as well as by day; blinded by sand; parched by thirst, and famishing with hunger.

Having arrived at Mexico in the latter part of December, they were, by the orders of Santa Anna, thrown into filthy prisons. After awhile, part were compelled to labor as common scavengers in the streets of the city; while others were sent to the stone quarries of Pueblo, where, under brutal taskmasters, they labored with heavy chains fastened to their limbs. Of the whole number, three were murdered on the march; several died of ill treatment and

hardship. Some few escaped, some were pardoned, and nearly all eventually released.

Soon after the result of this expedition was known, rumors prevailed of an intended invasion of Texas. In September, 1842, twelve hundred Mexicans, under General Woll, took the town of Bexar, but subsequently retreated beyond the Rio Grande. A Texan army was collected, which was zealous to carry the war into Mexico. After various disappointments and the return of most of the volunteers, three hundred Texans crossed the Rio Grande and attacked the town of Mier, which was garrisoned by more than two thousand Mexicans strongly posted. In a dark, rainy night, they drove in the guard, and in spite of a constant fire of the enemy, effected a lodgment in some houses in the suburbs, and with the aid of the deadly rifle, fought their way into the heart of the place. At length, Ampudia sent a white flag, which was accompanied by General La Vega and other officers, to inform the Texans of the utter hopelessness of resistance against an enemy ten times their number. The little band at length very reluctantly surrendered after a loss of only thirty-five in killed and wounded, while the Mexicans admitted theirs to have been over five hundred.

The Texans, contrary to the stipulations, were marched to Mexico, distant one thousand miles. On one occasion, two hundred and fourteen of them, although unarmed, rose upon their guard of over three hundred men, overpowered and dispersed them, and commenced their journey homeward; but ignorant of the country and destitute of provisions, and being pursued by a large party, they were obliged to surrender. Every tenth man was shot for this attempt at escape. The others were thrown into the dungeons of Perote, where about thirty died of cruel treatment. A few escaped and the remainder were eventually released.

Early application was made by Texas to be annexed to the United States. Presidents Jackson and Van Buren, in turn, objected on the ground of the unsettled boundary of Texas, and the peaceful relations with Mexico. President Tyler brought forward the measure, but it was lost in Congress. It having been the test question in the ensuing presidential election, and the people deciding in its favor by the election of the democratic candidates, Texas was annexed to the Union by a joint resolution of Congress, February 28th, 1845.

The Mexican minister, Almonte, who had before announced that Mexico would declare war if Texas were annexed, gave notice that since America had consummated "the most unjust act in her history," negotiations were at an end. From this and other causes followed the war with Mexico, and by the subsequent treaty of peace, an acknowledgment by that power of the independence of Texas. The boundaries of Texas were finally settled with precision by act of Congress in 1850, and that decision was acquiesced in by Texas.

TEXAS, the most southern State of the Union, contains about 270,000 square miles, and about 200,000 inhabitants. The general aspect of the country is that of a vast inclined plain, gradually sloping from the mountains eastward to the sea, and intersected by numerous rivers running in a southeast direction. The territory is naturally divided into three separate, and in many respects, different regions.

The first is a level region along the coast, with a breadth varying from thirty to one hundred miles. The soil of this section is principally a rich alluvion, with scarcely a stone, yet singularly free from stagnant swamps. Broad woodlands fringe the banks of the rivers, between which are rich and extensive pasture lands.

The second division is the undulating prairie region, which extends over two hundred miles farther inland, its wide grassy tracts alternating with others that are thickly timbered. These last are especially prevalent in the east, though many of the bottoms and river valleys elsewhere are woodland. Limestone and sandstone form the common substrata of at least the middle and southern part of this region—the upper soil there consisting of a rich, pliable sandy loam. This region is capable of supporting a dense population.

The third or mountainous region is situated principally in the west and northwest, and forms part of the Sierra Madre or Mexican Alps, but little explored and still unsettled. Near its remote extremity, it consists of an elevated table land, where the prairies not unfrequently resemble the vast steppes of Asia. The mountain sides are clothed with forests, and they inclose some alluvial valleys, which are susceptible of irrigation and cultivation. The part of New Mexico added to Texas is not included in the preceding description. On the west it is mountainous, the remainder is mostly an elevated, sterile plain, forming a part of what is called the "Great American Desert."

The Texan year is divided into a wet and dry season. The former lasts from December to March; the latter, the remainder of the year. In summer, the great heats are tempered by continual strong breezes from either the elevated table lands of the interior, or from over the waters of the Gulf, which continue from sunrise until three or four o'clock, p. m.; and the nights are cool throughout the year. On the low lands, near the coasts, intermittents are prevalent in summer, though not to an epidemic extent. The surface is in most parts covered with a luxuriant wild grass.

The climate of Texas is believed to be equal, if not superior, to that of any other part of North America; the winters being milder and the heats of summer less oppressive than in the northeastern section of the United States. The forests are destitute of that rank undergrowth which prevails in the wooded districts of Louisiana and Mississippi; and the level region is generally free from those putrid swamps which poison the atmosphere and produce disease and death. So delightful is the temperature in the greater portion

of Texas proper, that rheumatism and chronic diseases are very rare, and pulmonary consumption almost unknown.

With the exception of the apple, almost every fruit of temperate climates comes to perfection. Peaches, melons, figs, oranges, lemons, pine-apples, dates, olives, etc., may be grown in different localities. Cotton and sugarcane are the principal agricultural staples, and attain great perfection. Indian corn and wheat are the principal grains cultivated. Sweet and common potatoes yield remarkably well. The rearing of live stock has long been a favorite pursuit of the inhabitants; and many of the prairies are almost literally covered with immense herds of oxen. Horses and mules abound, and vast herds of buffalo and wild horses wander over the prairies. In many parts of the rolling prairies, excellent coal and iron ore have been found. Silver mines have been worked in the mountains. Granite, limestone, gypsum, and slate are abundant in some parts.

Austin, the capital, on the Colorado, two hundred miles from the sea, has about one thousand inhabitants. The other principal towns have respectively about the population annexed: Bastrop, four hundred; Brazoria, five hundred; Corpus Christi, one thousand; Galveston, five thousand; Houston, four thousand; Matagorda, seven hundred; Nacogdoches, one thousand; San Antonio de Bexar, one thousand; San Augustine, fifteen hundred; Washington, twelve hundred.

NEW MEXICO.

NEW MEXICO, of which Santa Fe, the capital, was one of the first establishments, dates among the earliest settlements made in North America. The name *Mexico*, in the *Aztec* Indian language, signifies *the habitation of the God of War*. Tradition mentions that a small band of adventurers proceeded thus far north shortly after the conquest of Mexico by Cortes; but this is extremely doubtful. In the year 1595, Don Juan de Onate, at the head of a band of two hundred soldiers, established the first legal colony in the province, over which he was established as governor. He took with him a number of Catholic priests to establish missions among the Indians, with power sufficient to promulgate the gospel at the point of the bayonet, and administer baptism by the force of arms.

The colony progressed rapidly; settlements extended in every quarter; and, as tradition relates, many valuable mines were discovered and worked. The poor Indians were enslaved, and, under the lash, were forced to most laborious tasks in the mines, until goaded to desperation. In the summer of 1680, a general insurrection of all the tribes and *Pueblos* took place throughout the province. General hostilities having commenced, and a large

number of Spaniards massacred all over the province, the Indians laid siege to the capital, Santa Fe, which the governor was obliged to evacuate, and retreat south three hundred and twenty miles, where the refugees then founded the town of El Paso del Norte. For ten years the country remained in possession of the Indians, when it was reconquered by the Spaniards. In 1698, the Indians rose, but the insurrection was soon quelled. After this they were treated with more humanity, each Pueblo being allowed a league or two of land, and permitted to govern themselves. Their rancorous hatred for their conquerors, however, never entirely subsided; yet no further outbreak occurred until 1837. In that year, a revolution took place, by which the government of the country was completely overthrown, and most atrocious barbarities committed by the insurgents, including the Pueblo Indians. The governor, Perez, was savagely put to death—his head cut off and used as a foot-ball by the insurgents in their camp. The ex-governor, Abrew, was butchered in a more barbarous manner. His hands were cut off; his tongue and eyes were pulled out; his enemies, at the same time, taunting him with opprobrious epithets. The next season Mexican authority was again established over the province.

At the commencement of the war with Mexico, in 1846, the President took measures for organizing an "Army of the West," the object of which was to conquer New Mexico and California. This army was composed of one mounted regiment of volunteers from Missouri, and a battalion each of light infantry, dragoons and light artillery. Having sent forward their baggage by a caravan of Santa Fe traders, the army left Fort Leavenworth the last of June, on the usual caravan route. They crossed the prairies without any marked incidents, and entered and took peaceable possession of Santa Fe, on the 18th of August, after a fifty days' march of nearly nine hundred miles.

On their arrival, the American commander, General Kearney, in accordance with his directions, proclaimed himself Governor of New Mexico. "You are now," said he, "American citizens; you no longer owe allegiance to the Mexican Government." The principal men then took the oath of allegiance to the United States, and whoever was false to this allegiance, the people were told, would be punished as traitors. It was questioned whether the Administration had not transcended its powers in thus annexing a territory to the Union without the permission of Congress.

General Kearney, having appointed Charles Bent, Governor of New Mexico, on the 25th of September, took a small force with him, and proceeded overland to California. Colonel Price arrived soon after at Santa Fe with recruits. The Navajo Indians having commenced hostilities against the New Mexicans, "new inhabitants of the United States," Colonel Doniphan, who had been left in command, set out westward with the Missouri regiment to make peace with them. Winter was fast approaching, and after suffering

incredible hardships in crossing the heights and chasms of unexplored mountains, having lost the lives of several of their men by frosts, poorly clad as they were among snows and mountain storms, they finally accomplished their object.

Captain Reid, of one of the divisions of thirty men, volunteered to accompany Sandoval, a Navajo chief, five days through mountain heights, to a grand gathering of the men and women of the tribe. They were completely in the power of the Indians, but they won their hearts by their gayety and confidence. Most of them had never seen a white man. Reid and his companions joined the dance, sung their country's songs, and, what pleased the Navajoes most, interchanged with them their costume. On the 22d of November, a treaty was made in form, by which the three parties, Americans, New Mexicans and Navajoes, agreed to live in perpetual peace.

By the middle of December, Colonel Doniphan, leaving Colonel Price in command at Santa Fe, commenced his march with his regiment south to Chihuahua, and on his route met and defeated superior forces of the enemy at Bracito, and at the Sacramento Pass.

In the meantime, the New Mexicans secretly conspired to throw off the yoke. Simultaneously, on the 19th of January, in the Valley of Taos, massacres occurred at Fernandez, when were cruelly murdered Governor Bent, Sheriff Lee, and four others; at Arroyo Hondo, five Americans were killed, and a few others in the vicinity. Colonel Price, on receiving the intelligence, marched from Santa Fe; met and defeated the insurrectionists in several engagements in the valley, with a loss of about three hundred. The Americans lost in killed and wounded about sixty. Fifteen of the insurrectionists were executed.

The Territory of New Mexico contains about two hundred and twenty thousand square miles. It is properly divided into two parts; that west of the Rocky Mountain range the new part, and that east the old part. The first was annexed to the last by Act of Congress in 1850, and includes a part of the vast territory which formerly went by the general name of California. It comprises not far from eighty thousand square miles. Of it but little is known, and it has few or no inhabitants, other than wandering tribes of Indians. Along the Gila, which separates it on the south from Mexico, it is destitute of trees, and, in great part, of any vegetation whatever. A few feeble streams flow in different directions from the great mountains, which, in many places, traverse this region. The portion of this territory north of the Gila has been but imperfectly explored; it has been described by the trappers who have passed over it as being mostly covered with mountain ranges, between which are narrow and oftentimes secluded valleys, small in extent, but rich in vegetation, and fragrant with the perfume of wild flowers.

The valley of the Gila is supposed to have been the residence of

the Aztecs during their emigration to the South. There is little doubt, however, but that the region extending from the Gila to the Great Salt Lake, with that east of it, was the locality from which they emigrated. It is conjectured that many hundred years ago it was a fertile and beautiful country, and that its ancient inhabitants were driven away by volcanic eruptions. On the Gila, it is said, are the ruins of a large city; huge ditches and irrigating canals furrow the plains in the vicinity. Pieces of broken pottery, of domestic utensils, stained with bright colors, quaintly covered idols, and women's ornaments of agate and obsidian, it is said, have been picked up by wandering trappers.

The Rio Colorado, the great river of this region, takes its rise in the slopes of the Rocky Mountains, near the northeastern boundary of Deseret; and thence passing in a southwest direction, crosses the western part, and enters the Gulf of California. The valley is unexplored, as it is inhabited by hostile Indians; but it is supposed to be of great fertility.

The old part of New Mexico, or that which, originally, was included in the Mexican province of the same name, is the district of country lying upon and east of the Rocky Mountains. It is the only portion now settled, and to which the remainder of this article will alone allude.

It possesses but a few natural advantages necessary to a rapid progress in civilization. It is surrounded by chains of mountains, and prairie wilds in every direction for five hundred miles or more, except in that of Chihuahua, from which it is separated by a desert country of over four hundred miles. Its nominal territory, when under Mexican dominion, was about two hundred thousand square miles, which has been much reduced by the Act of Congress in 1850, defining the boundary line of Texas.

New Mexico has not a single means of water communication with the rest of the world; the famous Rio Grande del Norte being full of sand-bars, and, at times, almost too shallow to float an Indian canoe. In the southern part, where it separates Texas from Mexico, it is navigable for steamboats drawing two feet of water to Laredo, seven hundred miles from its mouth. Opposite the valley of Taos, it runs pent up in a frightful chasm, through which it rushes in rapid torrents. Indeed, many of the rivers in the western part of our continent, wind their way through the bottoms of chasms. The Spanish word *canon*, meaning a *funnel*, has a peculiar adaptation to these cleft channels through which the rivers are poured. About sixty miles south of Santa Fe, in the mighty range of the Sierra Blanca, is a famous gorge, some fifteen miles through, called the "El Canone Inferno," or *the Infernal Pass*, where rise stupendous masses of rock piled upon rock, until the traveler sees at the top, but a narrow strip of sky; while around him all is inwrapt in chaotic gloom.

Santa Fe, the capital, eight hundred miles west of the Arkansas frontier—sometimes written *Santa Fe de San Francisco*—Holy

Faith of St. Francis—is its only town of any importance. It is on the site of an ancient Indian pueblo, some fifteen miles east of the Rio del Norte, at the base of a snow-clad mountain, and contains a little over three thousand souls, and with its corporate surrounding villages about double that number. The town is irregularly laid out, and is a wretched collection of mud houses, much scattered with intervening corn-fields. The only attempt at architectural compactness, consists of four tiers of buildings around the public square, comprising the *Palacio*, or Governor's House, the Custom House, Barracks, etc.

The population of New Mexico is almost exclusively confined to towns and villages, the suburbs of which are generally farms—a mode of living which has been indispensable for protection against the savages. The principal of these settlements extend about two hundred and forty miles along the valley of the Rio del Norte, being both above and below Santa Fe. Next to the capital, is the valley of Taos, there being no town of this name in New Mexico. It includes several villages and settlements. This valley is rich and beautiful, and produces abundant crops of wheat of a superlative quality. Although many of the bottom lands in New Mexico are fertile, yet the uplands are unproductive, partly from natural sterility, and partly from want of irrigation; hence, the settlements are, of necessity, principally confined to the valleys of the constant flowing streams. In some places the crops are frequently cut short by the drying up of the streams. Where water is abundant, however, art has so far superseded the offices of nature in watering the farms, that it is almost a question whether the interference of nature in the matter, would not be a disadvantage. On the one hand, the husbandman need not have his grounds overflowed if he administers the water himself, much less need he permit them to suffer from drought. He is, therefore, more sure of his crop, than if it were subject to the caprices of the weather in more favored agricultural regions.

One “mother ditch,” as it is called, suffices generally to convey water for the irrigation of an entire valley, or, at least, for all the fields of one town or settlement. This is made and kept in repair by the public, under the supervision of the *alcaldes*; laborers being allotted to work upon it as with us upon our county roads. The size of this principal ditch is, of course, proportioned to the quantity of land to be watered. It is conveyed over the highest part of the valley, which, on these mountain streams, is, for the most part, next to the hills. From this, each proprietor of a farm runs a minor ditch, in like manner, over the most elevated part of his field. Where there is not a superabundance of water, which is often the case on the smaller streams, each farmer has his day, or portion of a day, allotted to him for irrigation; and at no other time is he permitted to extract water from the mother ditch. Then the cultivator, after letting the water into his minor ditch, dams this, first at one point and then at another, so as to overflow a sec-

tion at a time, and with his hoe, depressing eminences and filling sinks, he causes the water to spread regularly over the surface. Though the operation would seem tedious, an expert irrigator will water in one day his five or six acre field, if level, and everything well arranged; yet on uneven ground, he will hardly be able to get over half of that amount.

The climate of New Mexico is unsurpassingly pure and healthy. A sultry day is very rare. The summer nights are cool and pleasant. The winters are long, but uniform, and the atmosphere of an extraordinary dryness; and there is but little rain, except from July to October. The general range of the thermometer is from 10 deg. to 75 deg. above Fahrenheit. Fevers are uncommon, and instances of remarkable longevity are frequent. Persons withered almost to mummies are met with occasionally, whose extraordinary age is showed by their recollection of certain notable events, which have taken place in times far remote.

Excluding the wild Indians, the population of New Mexico is estimated at about seventy thousand, viz: Spaniards, one thousand; Mestizos, or offspring of whites and Indians, fifty-nine thousand; and Pueblos, or Christianized Indians, ten thousand. In 1850, the number of Americans was estimated at about two thousand.

Agriculture is in a very primitive and unimproved state, the hoe being alone used by a greater part of the peasantry. Wheat and Indian corn are the principal staples; cotton, flax, and tobacco, although indigenous, are not cultivated: the soil is finely adapted to the Irish potato. Fruit is scarce, and there is but little timber, except in the mountains and on the watercourses. The most important natural product of the soil is its pasturage. Most of the high table-lands afford the finest grazing in the world, while, for want of water, they are utterly useless for most other purposes. That scanty moisture which suffices to bring forth the natural vegetation, is insufficient for agricultural productions, without the aid of irrigation. The high prairies of all this region, differ greatly from those of our border in the general character of their vegetation. They are remarkably destitute of the gay flowering plants for which the former are so celebrated, being mostly clothed with different species of a highly nutritious grass called *grama*, which is of a very short and curly quality. The highlands, upon which alone this sort of grass is produced, being seldom verdant until after the rainy season sets in, the *grama* is only in perfection from August to October. But being rarely nipped by the frost until the rains are over, it cures upon the ground and remains excellent hay—equal, if not superior, to that which is cut and stacked from our western prairies. Although the winters are rigorous, the feeding of stock is almost entirely unknown in New Mexico; nevertheless, the extensive herds of the country, not only of cattle and sheep, but of mules and horses, generally maintain themselves in excellent condition upon the dry pasturage alone

VIEW IN THE RUINS OF THE ALAMO.

"Never, in the world's history, had defense been more heroic; it has scarcely been equaled, save at the Pass of Thermopylae.

through the cold season, and until the rains start up the green grass again the following summer.

The mechanic arts are very rude, even sawed lumber being absolutely unknown. The New Mexicans are celebrated for the manufacture of a beautiful serape or blanket, which is woven into gaudy, rainbow-like hues. Their domestic goods are nearly all wool, the manufacture of which is greatly embarrassed for the want of adequate machinery.

The system of *Peon* slavery existed under the Mexican dominion. By the local laws, a debtor was imprisoned for debt until it was paid; or, if the creditor chose, he took the debtor as a servant to work out his claim. This system operated with a terrible severity upon the unfortunate poor, who, although they worked for fixed wages, received so small a compensation, that if the debt was of any amount, it compelled them to a perpetual servitude, as they received barely sufficient for food and clothing.

According to tradition, numerous and productive mines were in operation in New Mexico before the expulsion of the Spaniards in 1680; but these having been the causes of the terrible oppressions which they suffered, the Indians, after the second conquest, refused to disclose their locality. In various quarters of the territory are vestiges of ancient excavations, and in places, ruins of considerable towns, evidently reared for mining purposes. The most remarkable of these ancient ruins are those of *La Gran Quivira*, about one hundred miles south of Santa Fe, which evidently was much larger and richer than the present capital. The style of architecture is superior to anything at present in New Mexico. To be seen are the remains of Catholic churches and aqueducts leading to the mountains, eight or ten miles distant. As there are no indications of the inhabitants having been engaged in agriculture, and from the deep, spacious pits found there, it is evident that this town was established for the purpose of mining for the precious metals. In the general massacre of 1680, tradition says, that all the inhabitants save one, perished. On the high table lands in that vicinity are extensive salt lakes, from which all the salt used in New Mexico is produced. Large caravans go there for it annually, in the dry season, from Santa Fe.

The most important mine in New Mexico is *El Placer*, twenty-seven miles south of Santa Fe, from which, since its discovery in 1828, half a million of gold has been taken, but without great profit to the owners. Gold, doubtless, exists over almost the whole of New Mexico, but it requires more than the native enterprise and skill to mine successfully. Within the last century no *silver* mines have been in successful operation in New Mexico. Zinc, copper, and lead also exist.

The term *Pueblo*, in Spanish, literally means the *people* and their *towns*. In New Mexico the word is applied to the *Christianized Indians*, as well as to their villages. When the country was first discovered, these Indians lived in comfortable houses, and

cultivated the soil. Indeed, now they are the best horticulturists in New Mexico, furnishing most of the fruits and vegetables to be found in the markets. They also cultivate the grape, and have extensive herds of cattle, horses, etc. They are remarkable for sobriety, honesty, morality, and industry, and are much braver than the other class of New Mexicans, and in the war with Mexico, fought with desperation compared to those in the south. At the time of the conquest, they must have been a very powerful people, numbering near one hundred villages, as their ruins would indicate. The population of their villages or *pueblos*, average about five hundred souls. They assert that they are the descendants of Montezuma. They profess the Catholic faith, but this, doubtless, reaches no farther than understanding its formalities, and at the same time, they all worship the sun.

They were only nominally under the jurisdiction of the Mexican Government, many features of their ancient customs, in both government and religion, being retained. Each Pueblo was under the control of a *cacique* chosen by themselves, who, with his council, had charge of the interior police of the village. One of their regulations was to appoint a secret watch to suppress vice and disorder of every description, and especially to keep an eye over the young men and women of the village.

Their villages are built with adobes, and with great regularity; sometimes they have but one large house, with several stories, each story divided into apartments, in which the whole village reside. Instead of doors in front, they use trap-doors in the roofs of their houses, to which they mount up on a ladder, which is drawn up at night for greater security. Their dress consists of moccasins, short breeches, and woolen jackets or blankets; they generally wear their hair long. Bows and arrows and a lance, and sometimes a gun, constitute their weapons. They manufacture blankets, as well as other woolen stuffs, crockery-ware, and coarse pottery. The dress of many is like the Mexican; but the majority retain their aboriginal costume.

Among the villages of the Pueblo Indians, was that of the Pecos tribe, twenty-five miles east of Santa Fe, which gradually dwindled away under the inroads of the Camanches and other causes, until about the year 1838, when having been reduced to only about a dozen souls of all ages, they abandoned the place.

Many tales are told of the singular habits of this ill-fated tribe, which must, no doubt, have tended to hasten its utter annihilation. A tradition was prevalent among them that Montezuma had kindled a holy fire, and enjoined their ancestors not to suffer it to be extinguished until he should return to deliver his people from the yoke of the Spaniards. In pursuance of these commands, a constant watch had been maintained for ages to prevent the fire from going out; and, as tradition further informed them, that Montezuma would appear with the sun, the deluded Indians were to be seen every clear morning upon the terraced roofs of their houses, atten-

tively watching for the appearance of the "king of light," in hopes of seeing him accompanied by their immortal sovereign. This consecrated fire was down in a subterranean vault, where it was kept silently smouldering under a covering of ashes, in the basin of a small altar. Some say that they never lost hope in the final coming of Montezuma until, by some accident or other, or a lack of a sufficiency of warriors to watch it, the fire became extinguished; and that it was this catastrophe that induced them to abandon their village.

The task of tending the sacred fire was, it is said, allotted to the warriors. It is further related, that they took the watch by turns for two successive days and nights, without partaking of either food, water, or sleep; while some assert, that instead of being restricted to two days, each guard continued with the same unbending severity of purpose until exhaustion; and, that frequently death left their places to be filled by others. A large proportion of those who came out alive were generally so completely prostrated by the want of repose and their inhalation of carbonic gas, that they very soon died; when, as the vulgar story asserts, their remains were carried to the den of a monstrous serpent, which kept itself in excellent condition by feeding upon these delicacies.

Even so late as 1830, when it contained a population of fifty to a hundred souls, the traveler would oftentimes perceive but a solitary Indian, a woman or a child, standing here and there, like so many statues, upon the roofs of their houses, with their eyes fixed on the eastern horizon, or leaning against a wall or a fence, listlessly gazing at the passing stranger; while at other times not a soul was to be seen in any direction, and the sepulchral silence of the place was only disturbed by the occasional barking of a dog or the cackling of hens. No other Pueblo appears to have adopted this extraordinary superstition; like Pecos, however, they have all held Montezuma to be their perpetual sovereign. It would likewise appear that they all worship the sun; for it is asserted to be their regular practice to turn the face toward the east at sunrise.

The wild tribes who inhabit or extend their incursions into New Mexico, are the Navajoes, the Apaches, the Yutas, the Kiawas, and the Camanches. The Navajoes are estimated at about ten thousand, and reside in the main range of the Cordilleras, two hundred miles west of Santa Fe, on the Rio Colorado, near the region from whence historians say the Aztecs emigrated to Mexico. They are supposed to be the remnants of that justly celebrated nation of antiquity who remained in the north. Although living in rude wigwams, they excel all Indian nations in their manufactures. They are still distinguished for some exquisite styles of cotton textures, and display considerable ingenuity in embroidering with feathers the skins of animals. The serape Navajo (Navajo blanket) is of so dense a texture as to be frequently waterproof, and some of the finer qualities bring sixty dollars each, among the

Mexicans. Notwithstanding their wandering habits, they cultivate the different grains and vegetables, and possess extensive and superior herds of horses, mules, cattle, sheep, and goats.

The Apaches are mainly west of the Rio del Norte, and are the most powerful and vagrant of the Indian tribes of Northern Mexico, and number, it is estimated, fifteen thousand souls, of whom two thousand are warriors. They cultivate and manufacture nothing, and appear to depend entirely upon pillage for subsistence. The depredations of the Apaches have been of so long a duration that beyond the immediate vicinity of the towns, the whole country, from New Mexico to the borders of Durango, is almost entirely depopulated. The *Eutaws*, or *Yutas*, are scattered from the north of New Mexico to the borders of Snake River and Rio Colorado, and are estimated at ten thousand souls. These various tribes, particularly the Apaches, are the terror of the Mexicans. They are considered by them as a very brave people, but not equal in this respect to the Camanches; while the latter, who number about twenty thousand, are perfect poltroons when compared with the Shawanees, Wyandots, Seminoles, and the rest of our border tribes.

The New Mexicans are very similar to the rest of the Spanish race all over Mexico, so often described by travelers. The higher classes conform themselves more to American and European fashions; the men of the lower classes are faithful to their serapes or colored blankets, and to their wide trowsers, ornamented with glittering buttons, and which are split from hip to ankle to display their white cotton drawers. The females of all classes are more than justified in not giving up their coquettish reboso, a small shawl drawn over the head. Both sexes enjoy the cigarrito, or paper cigar, hold their siesta after dinner, and amuse themselves in the evening with monte or fandangoes. Their dances are very graceful, and generally a combination of quadrille and waltz. The males are generally ill-featured, while the females are often quite handsome. Another striking singularity is the wide difference in the character of the two sexes. While the men have often been censured for their indolence, mendacity, treachery, and cruelty, the women are active, affectionate and open-hearted. Though generally not initiated in the art of reading and writing, the females possess, nevertheless, a strong common sense and a natural sympathy for every suffering being, be it friend or foe, which compensates them in some degree for the want of a refined education.

OREGON.

THE western coasts of North America were first partially explored by the Spaniards in the century succeeding the discovery of America. Their explorations were later followed by the English. In 1578, Sir Francis Drake ranged this coast from thirty-eight to

forty-eight degrees. This region was called by the English *New Albion*. The name *Oregon* is from *Oregano*, the Spanish name for wild marjoram; and it is from this word, or some other similar, that its name is supposed to have arisen. But little was known of even its coast up to the latter part of the last century. Immediately after the last voyage of the renowned navigator, Captain Cook, the immense quantities of sea otter, beaver, and other valuable furs to be obtained on the northwest coast of America, and the enormous prices which they would bring in China, was communicated to civilized nations, and created as much excitement as the discovery of a new gold region. A large number of people rushed at once into this lucrative traffic, so that in the year 1792, it is said, there were twenty-one vessels under different flags, but principally American, plying along the coast of Oregon, and trading with the natives.

Up to this period, nothing was positively known of the Columbia River, the greatest stream which enters the Pacific from America. The Spanish navigator, Heceta, in August, 1776, first saw the opening through which its waters discharge into the ocean, and it was accordingly marked on the Spanish charts as the mouth of the River San Roque. In July, 1788, Lieutenant Meares, of the British Navy, examined it, and left with the conviction that no river was there; yet this was the claim which the British set up to possession by the right of discovery. Vancouver, another British navigator who was exploring the coast in 1792, confirmed this opinion. He stated that from Cape Mendocino, in California, to the Straits of Fuca, the southern boundary of Vancouver's Island, there was not a single harbor, "the whole coast forming one compact and nearly straight barrier against the sea."

On the 7th of May, 1792, Captain Robert Gray, of the ship *Columbia*, of Boston, discovered and entered the river, which he named from his vessel. He was, in reality, the first person who established the fact of the existence of this great river, and this gave to the United States the right to the country drained by its waters by the virtue of discovery.

In the autumn of the year 1792, Sir Alexander Mackenzie, with an exploring party, left Fort Chippewayan, on Athabasca Lake, midway between Hudson's Bay and the Pacific, in the high northern latitude of fifty-nine degrees, and reached the Pacific Ocean in July, 1793, in latitude fifty-two degrees twenty minutes, being thus the first white man who ever crossed the American continent in its widest part. His route appears to have been some distance north of what is now the northern boundary of Oregon. In 1804-5, Lewis and Clarke explored the country from the mouth of the Missouri to that of the Columbia. This exploration of the Columbia, the first ever made, constituted another ground of the claim of the United States to the country. In 1806, the British Northwest Fur Company established a trading-post on Fraser's Lake, in latitude fifty-four degrees, which was the first settlement of any kind made

by British subjects west of the Rocky Mountains. Other posts were established by them soon after in that region, to which was then given the name of New Caledonia.

In 1808, the Missouri Fur Company, through their agent, Mr. Henry, established a trading-post on Lewis River, a branch of the Columbia, which was the first establishment of civilized people in what is now Oregon. An attempt was made that year by Captain Smith, of the *Albatross*, of Boston, to found a trading-post on the south bank of the Columbia, forty miles from its mouth. It was abandoned the same season, and that of Mr. Henry in 1810.

In the year 1810, John Jacob Astor, a German merchant of New York, who had accumulated an immense fortune by commerce in the Pacific and China, formed the Pacific Fur Company. His first objects were to concentrate in the company, the fur-trade in the unsettled parts of America, and also the supply of merchandise for the Russian fur-trading establishments in the North Pacific. For these purposes, posts were to be established on the Missouri and Columbia and vicinity. These posts were to be supplied with the merchandise required for trading by ships from the Atlantic coast, or across the country by the way of the Missouri. A factory or depot was to be founded on the Pacific, for receiving this merchandise, and distributing it to the different posts, and for receiving in turn furs from them, which were to be sent from thence to Canton. Vessels were also to be sent from the United States to the factory with merchandise to be traded for furs, which would then be sent to Canton, and there exchanged for teas, silks, etc., to be in turn distributed in Europe and America.

This stupendous enterprise at the time appeared practicable. The only party from whom any rivalry could be expected, was the British Northwest Company, and their means were far inferior to those of Astor. From motives of policy, he offered them one-third interest, which they declined, secretly intending to forestall him. Having matured his scheme, Mr. Astor engaged partners, clerks, and *voyageurs*, the majority of whom were Scotchmen and Canadians, previously in the service of the Northwest Company. Wilson P. Hunt of New Jersey, was chosen the chief agent of the operations in Western America.

In September, 1810, the ship *Tonquin*, Captain Thorn, left New York for the mouth of the Columbia with four of the partners, M'Kay, M'Dougal, and David and Robert Stuart, all British subjects, with clerks, *voyageurs*, and mechanics. In January, 1811, the second detachment, with Hunt, M'Clellan, M'Kenzie, and Crooks, also left New York to go overland by the Missouri to the same point, and in October, 1811, the ship *Beaver*, Capt. Sowles, with several clerks and attaches, left New York for the North Pacific. Prior to these, in 1809, Mr. Astor had dispatched the *Enterprise*, Captain Ebberts, to make observations at the Russian settlements, and to prepare the way for settlements in Oregon. He also, in 1811, sent an agent to St. Petersburg, who obtained

from the Russian American Fur Company the monopoly of supplying their posts in the North Pacific with merchandise, and receiving furs in exchange.

In March, 1811, the *Tonquin* arrived at the Columbia, and soon after they commenced erecting on the south bank, a few miles inland, their factory or depot building: this place they named *Astoria*. In June, the *Tonquin*, with M'Kay, sailed north to make arrangements for trading with the Russians. In July, the Astorians were surprised by the appearance of a party of the Northwest Company, under Mr. Thompson, who had come overland from Canada to forestall them in the occupation of the mouth of the Columbia; but had been delayed too late for this purpose, in seeking a passage through the Rocky Mountains, and had been obliged to winter there. Mr. Thompson was accompanied on his return by David Stuart, who founded the trading-post called *Okonogan*.

In the beginning of the next year (1812), the detachment of Hunt came into Astoria in parties, and in a wretched condition. They had been over a year in coming from St. Louis; had undergone extreme suffering from hunger, thirst, and cold in their wanderings that winter, through the dreary wilderness of snow-clad mountains, from which, and other causes, numbers of them perished. In May, 1812, the *Beaver*, bringing the third detachment, under Mr. Clarke, arrived at Astoria. They brought a letter which had been left at the Sandwich Islands by Captain Ebberts, of the *Enterprise*, containing the sad intelligence that the *Tonquin* and her crew had been destroyed by the savages, near the Straits of Fuca, the June preceding.

In August, Mr. Hunt, leaving Astoria in the charge of M'Dougal, embarked in the *Beaver* to trade with the Russian posts, which was to have been done by the *Tonquin*. He was successful, and effected a highly advantageous arrangement at Sitka with Baranof, Governor of Russian America; took in a rich cargo of furs, and dispatched the vessel to Canton, *via* the Sandwich Islands, where he in person remained, and in 1814, he returned to Astoria in the *Peddler*, which he had chartered, and found that Astoria was in the hands of the Northwest Company.

When Hunt left in the *Beaver*, a party was dispatched, which established a trading-post on the *Spokan*. Messrs. Crooks, M'Clellan, and Robert Stuart about this time set out and crossed overland to New York, with an account of what had been done. The trade was in the meantime very prosperous, and a large quantity of furs had been collected at Astoria.

In January, 1813, the Astorians learned from a trading vessel that a war had broken out with England. A short time after, M'Tavish and Laroque, partners of the Northwest Company, arrived at Astoria; M'Dougal and M'Kenzie (both Scotchmen) were the only partners there, and they unwisely agreed to dissolve the company in July. Messrs. Stuart and Clarke, at the *Okonogan* and *Spokan* Posts, opposed this; but it was finally agreed that if

assistance did not soon arrive from the United States, they would abandon the enterprise.

M'Tavish and his followers of the Northwest Company again visited Astoria, where they expected to meet the Isaac Todd, an armed ship from London, which had orders "to take and destroy everything American on the northwest coast." Notwithstanding they were hospitably received, and held private conferences with M'Dougal and M'Kenzie, the result of which was that they sold out the establishment, furs, etc., of the Pacific Company in the country to the Northwest Company, for about \$58,000. That company were thus enabled to establish themselves in the country.

Thus ended the Astoria enterprise. Had the directing partners on the Columbia been Americans instead of foreigners, it is believed that they would, notwithstanding the war, have withstood all their difficulties. The sale was considered disgraceful, and the conduct of M'Dougal and M'Kenzie in that sale and subsequently was such as to authorize suspicions against their motives; yet they could not have been expected to engage in hostilities against their countrymen and old friends.

The name of Astoria was changed by the British to that of Fort George. From 1813 to 1823, few, if any, American citizens entered the countries west of the Rocky Mountains. Nearly all the trade of the Upper Mississippi and Missouri was carried on by the Old North American Fur Company, of which Astor was the head; and by the Columbia Fur Company formed in 1822, composed mainly of persons who had been in the service of the Northwest Company, and were dissatisfied with it. The Columbia Company established posts on the upper waters of the Mississippi, the Missouri, and the Yellow Stone, which were transferred, in 1826, to the North American Company on the junction of the two bodies. About this time the overland trade with Santa Fe commenced, caravans passing regularly every summer between St. Louis and that place. In 1824, Ashley, of St. Louis, re-established commercial communications with the countries west of the Rocky Mountains, and built a trading-post on Ashley's Lake, in Utah.

These active proceedings of the Missouri Fur Traders stimulated the North American Fur Company to send their agents and attaches beyond the Rocky Mountains, although they built no posts. In 1827, Mr. Pilcher, of Missouri, went through the South Pass with forty-five men, and wintered on the headwaters of the Colorado, in what is now the northeast part of Utah. The next year he proceeded northwardly along the base of the Rocky Mountains to near latitude forty-seven degrees. There he remained until the spring of 1829, when he descended Clarke River to Fort Colville, then recently established at the falls by the Hudson's Bay Company, which had a few years previous absorbed and united the interests of the Northwest Company. He returned to the United States through the long and circuitous far northward route of the

FREMONT'S PEAK, ROCKY MOUNTAINS.

"We had climbed the loftiest peak of the Rocky Mountains, and looked down upon the snow below, and, standing where human feet had never stood before, felt the exultation of first explorers."

Upper Columbia, the Athabasca, the Assinaboin, Red River, and the Upper Missouri. But little was known of the countries through which Pilcher traversed previous to the publication of his concise narrative. The account of the rambles of J.-O. Pattie, a Missouri fur-trader, through New Mexico, Chihuahua, Sonora and California, threw some light on the geography of those countries. In 1832, Captain Bonneville, United States army, while on a furlough, led a party of one hundred men from Missouri over the mountains, where he passed more than two years on the Columbia and the Colorado, in hunting, trapping and trading.

About the same time, Captain Wyeth, of Massachusetts, attempted to establish commercial relations with the countries on the Columbia, to which the name of OREGON then began to be universally applied. His plan was like that of Astor, with the additional scheme of transporting the salmon of the Oregon rivers to the United States. He made two overland expeditions to Oregon, established Fort Hall as a trading-post, and another, mainly for fishing purposes, near the mouth of the Willamette. This scheme failed, owing to the rivalry of the Hudson's Bay Company, who founded the counter-establishment of Fort Boise, where offering goods to the Indians at lower prices than Wyeth could afford, compelled him to desist, and he sold out his interests to them. Meanwhile a brig he had dispatched from Boston arrived in the Columbia, and returned with a cargo of salted salmon, but the results not being auspicious, the enterprise was abandoned.

The American traders being excluded by these and other means from Oregon, mainly confined themselves to the regions of the headwaters of the Colorado and the Utah Lake, where they formed one or two small establishments, and sometimes extended their rambles as far west as San Francisco and Monterey. The number of American hunters and trappers thus employed west of the Rocky Mountains seldom exceeded two hundred; where, during the greater part of the year, they roved through the wilds in search of furs, which they conveyed to their places of rendezvous in the mountain valleys, and bartered with them to the Missouri traders.

About the time of Wyeth's expeditions, were the earliest emigrations to Oregon of settlers from the United States. The first of these was founded in 1834, in the Willamette Valley, by a body of Methodists, who went round by sea, under the direction of the Rev. Messrs. Lee and Shepherd. In that valley a few retired servants of the Hudson's Bay Company were then residing, and engaged in herding cattle. The Congregationalists or Presbyterians planted colonies two or three years after in the Wallawalla and Spokane countries, with Messrs. Parker, Spaulding, Gray, Walker, Eels, Smith and Whitman as missionaries.

In all of these places mission schools were established for the instruction of the natives, and in 1839, a printing-press was started at Wallawalla, where were printed the first sheets ever

struck off on the Pacific side of the mountains north of Mexico. On it books were printed from types set by native compositors. The Roman Catholics from Missouri soon after founded stations on Clarke River.

About the year 1837, the American people began to be deeply interested in the subject of the claims of the United States to Oregon, and societies were formed for emigration. From them and other sources petitions were presented to Congress, to either make a definite arrangement with Great Britain, the other claimant, or take immediate possession of the country. In each year, from 1838 to 1843, small parties emigrated overland from Missouri to Oregon, suffering much hardship on the route. At the close of 1842, the American citizens there numbered about four hundred. Relying upon the promise of protection held out by the passage of the bill in February, 1843, by the United States Senate, for the immediate occupation of Oregon, about one thousand emigrants, men, women and children, assembled at Westport, on the Missouri frontier, in the succeeding June, and followed the route up the Platte, and through the South Pass, surveyed the previous year by Fremont; thence by Fort Hall to the Willamette Valley, where they arrived in October, after a laborious and fatiguing journey of more than two thousand miles. Others soon followed and before the close of the next year, over three thousand American citizens were in Oregon.

By the treaty for the purchase of Florida in 1819, the boundary between the Spanish possessions and the United States was fixed on the Northwest, at lat. forty-two degrees, the present northern line of Utah and California; by this, the United States succeeded to such title to Oregon as Spain may have derived, by the right of discovery through its early navigators. In June of 1846, all the difficulties in relation to Oregon, which at one time threatened war, were settled by treaty between the two nations. In general terms, the treaty established lat. forty-nine degrees, as the northern boundary; British subjects were allowed the free navigation of the Columbia, and the Hudson's Bay Company and all British subjects, were to be continued in possession of whatever land or property they at that time held in Oregon.

The principal obstacles to a previous settlement, had been the influence of that company. The English people at large, knew little of, and took but slight interest in, the country. The British first, through the Northwest Company, and then through the Hudson's Bay Company (into which the former became absorbed), from 1814 up to 1840, had enjoyed the almost exclusive use of Oregon. The Hudson's Bay Company received from the British government, to the exclusion of all other British subjects, the exclusive right to trade west of the Rocky Mountains, where the fur-bearing animals were more abundant than in any other part of the world.

The constitution of the Company is such as to secure knowledge

and prudence in council, and readiness and exactness in execution. Their treatment of the Indians, admirably combined policy and humanity. Ardent spirits were prohibited from being sold to them; schools for the instruction of the Indian children, were established at each of the trading-posts, and hospitals for the sick; missionaries of various sects were encouraged and fostered; and all emigrants from the United States and elsewhere, were treated with the utmost kindness and hospitality. But no sooner did any of them attempt to hunt, or trap, or to trade with the natives, than the competition of the body was turned against him, and he was compelled to desist. As the fur-trade began to decline, the company turned their attention to agriculture, lumbering, fishing, and other pursuits.

In 1841, the coast of Oregon was visited by the ships of the United Exploring Expeditions under Lieutenant Charles Wilkes. He arrived in the sloop of war Vincennes, off the mouth of the Columbia, on the 27th of April; but finding it hazardous to attempt the entrance, he sailed to the Straits of Fuca, the southern boundary of Vancouver's Island, and anchored in Puget's Sound, near Fort Nasqually, from which he dispatched several surveying parties into the interior. One of these crossed the great westernmost range of mountains to the Columbia; and having visited the British trading-post of Okonogan, Colville, and Wallawalla, returned to Nasqually. Another party proceeded southward to the Cowelitz, a stream running south, and emptying into Columbia River, about forty miles from the ocean. From the mouth of the Cowelitz, they went up the Columbia to Wallawalla, and down again to the ocean. In the meantime, other parties were engaged in surveying the coasts and harbors on the Pacific, the Straits of Fuca, and Admiralty Inlet; and particularly in exploring the Valleys of the Willamette, emptying into the Columbia, and of the Sacramento River of California. During the performance of these duties, the sloop of war Peacock was lost on the bar at the mouth of the Columbia; but the crew, instruments, and papers were saved.

At that time, Wilkes estimated the population to be: of Indians, nineteen thousand one hundred and ninety-nine; Canadians and half-breeds, six hundred and fifty, and the citizens of the United States, at one hundred and fifty. The Hudson's Bay Company then had twenty-five forts and trading stations in Oregon. Dr. M'Laughlin, the executive officer of the company, was kind to the American settlers, and although a Catholic, was noted for his hospitality to the Methodist and Presbyterian missionaries. The charter of the Hudson's Bay Company precluding them from engaging in agriculture, its officers, agents, and servants organized another company for this purpose, with a capital of two millions, called the Puget Sound Company. They began by making large importations of stock from California, and some of the choicest breeds from England. They entered into farming on an extensive

scale. Almost all their trading establishments have been changed into agricultural ones, and all their stations and forts and the Russian ports on the north, were then almost entirely supplied by them with wheat, butter, and cheese.

Among the most marked incidents in the recent history of Oregon, has been the Cayuse war, in the winter of 1847-'8. It grew out of these circumstances: The Rev. Dr. Whitman, a Presbyterian missionary, who, beside his religious duties, had established a fort and trading-post in the Wallawalla Valley, and employed large numbers of Indians and emigrants in agriculture. Many of these Cayuse Indians had under his guidance become partially civilized, and were good farmers. He was eminent for his hospitality to the newly-arrived and exhausted emigrants, and was popular with all. His lady was also remarkable for her kindness, and at that time was administering to the Indians for the measles, which extensively prevailed among them. Many dying of the disease, they became suspicious that they were poisoned by the medicines given them by the Whitmans. On the 29th of November, about noon, the Indians rushed into the fort, murdered Dr. Whitman and lady, and thirteen others; took sixty-one persons prisoners, and burnt the fort and houses of the settlement. Upon the receipt of the news in the Willamette settlements, troops were raised, and the Indians defeated in three battles, and their villages and provisions destroyed. The prisoners were eventually released, through the praiseworthy efforts of Peter Skein Ogden, Esq., chief factor of the Hudson's Bay Company.

OREGON was organized as a territory in 1848. It has an average width east and west, of about six hundred and eighty miles, and north and south of five hundred miles, giving an area of about 340,000 square miles. It is divided into three natural sections:

First Section, is that between the Pacific Ocean and the President's range or Cascade Mountains. The Cascade range runs parallel with the sea-coast, the whole length of the territory, and is continued through California, under the name of the Sierra Nevada. It rises in many places in conical peaks, to the height of 12,000 and 14,000 feet, or over two miles above the level of the ocean. The distance from the sea-shore to this chain is from one hundred to one hundred and fifty miles; there are a few mountain passes, but they are difficult, and only to be attempted late in the spring and summer. The climate of this section is mild throughout the year, neither experiencing the extreme cold of winter, or the heat of summer. The prevailing winds in the summer are from the northward and westward, and in winter, from the southward, and westward, and southeast, which are tempestuous. The winter is supposed to last from December to February. Rains usually begin to fall in November, and last until March; but they are not heavy, though frequent. Snow sometimes falls, but it seldom lies over three days. The frosts are early, occurring in the

latter part of August; this, however, is to be accounted for by the proximity of the mountains. Fruit trees blossom early in April. The soil, in the northern parts, varies from a light brown loam to a thin vegetable earth, with gravel and sand as a subsoil; in the middle parts, from a rich heavy loam and unctuous clay to a deep heavy black loam, on a traprock; and in the southern (the Willamette Valley) the soil is generally good, varying from a black vegetable loam to decomposed basalt, with stiff clay, and portions of loose gravel-soil. The hills are generally basalt, and stone, and slate; between the Umpqua River and the southern boundary the rocks are primitive, consisting of slate, hornblende, and granite, which produce a gritty and poor soil; there are, however, some places of rich prairie, covered with oaks. It is, for the most part, a well-timbered country. It is intersected with the spurs or offsets from the Cascade Mountains, which render its surface much broken; these are covered with a dense forest. The timber consists of pines, firs, spruce, oaks (red and white), ash, arbutus, arbor vitæ, cedar, poplar, maple, willow, cherry, and tew, with a close undergrowth of hazel, rubus, roses, etc. The richest and best soil is found on the second or middle prairie, and is best adapted for agriculture; the high and low being excellent for pasture-land. The climate and soil are admirably adapted for all kinds of grain—wheat, rye, oats, barley, peas, etc. Indian corn does not thrive in any part of this territory, as well as in the Mississippi Valley. Many fruits appear to succeed well, particularly the apple and pear. Vegetables grow exceedingly well, and yield most abundantly.

The Second, or Middle Section, is that between the Cascade and Blue Mountain range. The Blue Mountains are irregular in their course and occasionally interrupted, but generally running in a northerly direction. They commence in the Klamet range, near the southern boundary of the Territory; they are broken through by the Saptin or Snake River at the junction of the Kooskooskee River, and branch off in hills of moderate elevation, until they again appear on the north side of the Columbia River, above the Okonogan River, passing in a northern direction, until they unite with the Rocky Mountains, in latitude fifty-three degrees north. The climate of the middle section is variable; during the summer the atmosphere is much drier and warmer, and the winter much colder than in the western section. Its extremes of heat and cold are more frequent and greater, the mercury falling as low as minus eighteen degrees of Fahrenheit in winter, and rising to one hundred and eight degrees in the shade of summer; the daily difference of temperature is about forty degrees Fahrenheit. It has, however, been found extremely salubrious, possessing a pure and healthy air. No dews fall in this section. The soil is, for the most part a light sandy loam, in the valleys a rich alluvial, and the hills are generally barren. The surface is about one thousand feet above the level of the western section, and is generally a roll-

ing prairie country. In the center of this section, and near the junction of the Saptin, or Snake, and Columbia Rivers, is an extensive rolling country, which is well adapted for grazing. South of the Columbia, and extending to the southern boundary of the Territory, it is destitute of timber or wood, unless the wormwood (*artemisia*) may be so called, although there are portions of it that might be advantageously farmed.

The Third, or East Section, is that between the Rocky and the Blue Mountains. The Rocky Mountains commence on the Arctic coast, and continue an almost unbroken chain until they merge in the Andes of South America. That part forming the eastern boundary of Oregon, extending north from the Great South Pass, at latitude forty-two degrees north, to about the fifty-second degree, at the Committee's Punch-bowl Pass, forms an almost impenetrable barrier, the few passes between being very difficult and dangerous. The climate of the eastern section is extremely variable. In each day there are all the changes incident to spring, summer, autumn, and winter. There are places where small farms might be located, but they are few in number. The soil is rocky and broken, and presents an almost unbroken barren waste. Stupendous mountain-spurs traverse it in all directions, affording little level ground. Snow lies on the mountains nearly, if not quite, throughout the year. It is exceedingly dry and arid, rains seldom falling, and but little snow. This country is partially timbered, and the soil much impregnated with salts.

The Columbia is the great river of the Territory, nearly all the others being its tributaries. Its northern branch, Clarke River, from its source in the Rocky Mountains to near Fort Colville, is bounded by lofty wooded mountains. At Wallawalla it unites with its other branch, the Lewis, which is not navigable for even canoes. At the junction, the Columbia is twelve hundred and eighty-six feet above the ocean, and near three-fourths of a mile wide; it here takes its last turn to the westward, pursuing a rapid course for a hundred and eighty miles, previous to passing through the Cascade range, in a series of falls and rapids that obstruct its flow and form, during floods, insurmountable barriers to boat navigation, which difficulties are now overcome by portages. Locks and canals will be eventually used. From thence, there is still-water navigation for forty miles, when its course is again obstructed by rapids. Thence to the ocean, one hundred and twenty miles, it is navigable for vessels of twelve feet draught at the lowest stage of water. To the south of the Columbia the only three rivers of note are the Umpqua, Rogue's, and the Klamet.

The character of the great rivers is peculiar—rapid and sunken much below the level of the country, running as it were in trenches, and exceedingly difficult to get at in many places, owing to the steep basaltic walls. During high water they are in many places confined by *dalles*, *i. e.* narrows, which back the water, covering the islands and tracts of low prairie, giving the appear-

ance of extensive lakes. The dalles of the Columbia, eighty-four miles below Wallawalla, is a noted place, where the river passes between vast masses of rock. Oregon is well watered by springs, rivulets, and lakes.

The harbors are more or less obstructed by sand brought down by the rivers. The mouth of the Columbia, formerly considered to be very dangerous from this cause, proves to be less so than was supposed, and vessels of sixteen feet draught now frequently enter and depart in safety, without pilots or buoys. The harbors of the Straits of Fuca are equal to any in the world, among which, that of Puget's Sound on Admiralty Inlet, the bay running south from the strait, is noted.

It will be almost impossible to give an idea of the extensive fisheries in the rivers and on the coast. They all abound in salmon of the finest flavor, which run twice a year, beginning in May and October, and appear inexhaustible; the whole population live upon them. The Columbia produces the largest, and probably affords the greatest numbers. There are some few branches of the Columbia that the spring fish do not enter, but they are plentifully supplied in the fall. The great fishery of the Columbia is at the Dalles, but all the rivers are well supplied. The last one on the northern branch of the Columbia is near Colville, at Kettle Falls; but salmon are found above this in the river and its tributaries. In the rivers and sounds are found several kinds of salmon, salmon-trout, sturgeon, cod, carp-sole, flounders, ray, perch, herring, lamprey-eels, and a smelt called "*shrow*," in great abundance; also large quantities of shellfish, viz: crabs, clams, oysters, mussels, etc., which are all used by the natives, and constitute the greater proportion of their food. Whales in numbers are found along the coast, and are frequently captured by the Indians in and at the mouth of the Straits of Juan de Fuca.

Abundance of game exists, such as elk, deer, antelope, bears, wolves, foxes, muskrats, martins, beavers, a few grizzly bears and siffleurs, which are eaten by the Canadians. In the middle section, or that designated by the rolling prairie, no game is found. In the eastern section the buffalo is met with. The fur-bearing animals are decreasing in numbers yearly; indeed, it is very doubtful whether they are sufficiently numerous to repay the expense of hunting them. The Hudson's Bay Company have almost the exclusive monopoly of this business. They have decreased, owing to being hunted without regard to season. This is not, however, the case to the north, in the British possessions; there the company have been left to exercise their own rule, and prevent the indiscriminate slaughter of either old or young out of the proper season. In the spring and fall, the rivers are literally covered with geese, ducks, and other water-fowl.

Fort Vancouver, on the Columbia, and ninety miles from the ocean, is the principal seat of the British fur trade, and the headquarters of the Hudson's Bay Company. It is a large stockade

inclosing many buildings. Here is a fine farm, workshops, mills, and a school. Astoria, or Fort George, is eight miles from the mouth of the Columbia River, and has but two or three buildings.

In this neighborhood are forests of pine, which have long been noted for their beauty and size. Lieutenant Wilkes, U. S. N., thus speaks of them: "Short excursions were made by many of us in the vicinity, and one of these was to visit the primeval forest of pines in the rear of Astoria, a sight well worth seeing. Mr. Drayton took a camera lucida drawing of one of the largest trees, which the opposite plate is engraved from. It conveys a good idea of the thick growth of trees, and is quite characteristic of this forest. The soil on which this timber grows is rich and fertile, but the obstacles to the agriculturist are almost insuperable. The largest tree of the sketch was thirty-nine feet six inches in circumference, eight feet above the ground, and had a bark eleven inches thick. The height could not be ascertained, but it was thought to be upward of two hundred and fifty feet, and the tree was perfectly straight." These trees, for at least one hundred and fifty feet, are without branches. In many places, those which have fallen down, present barriers to the vision, even when the traveler is on horseback; and between the old forest trees that are lying prostrate, can be seen the tender and small twig beginning its journey to an amazing height.

Fort Wallawalla, or Nezperces, is on the south side of the Columbia, ten miles below the mouth of Lewis River. Fort Colville is on the south side of the Clarke River, above Fort Okonogan. Okonogan and Spokane, on Spokane River, were the first fur trading establishments of the company of John Jacob Astor in Oregon. The mountains in the view, are part of the Blue Mountain range, which rise to a great height. Okonogan is now kept up as a depot for supplies. The Hudson's Bay Company have various other trading-posts throughout the country.

The American settlements in Oregon are confined to the western section of Oregon, and are principally in the beautiful and fertile Valley of the Willamette. Oregon City is two thousand three hundred miles from St. Louis, on the east bank of the Willamette, just below the falls, at the head of navigation, and about eighteen miles from the mouth of the river. It is the largest town in Oregon. In 1848, it contained one Methodist and one Catholic church, a public library, one newspaper printing-office, one female boarding-school, one day-school, five stores, three hotels, two flouring and two saw-mills, and six hundred and fifty inhabitants. It has since much increased. Milwaukie, Plymouth, Portland, and Salem, on the Willamette, and Cascade on the Columbia, are promising places. In 1848, the total white population was about nine thousand: in 1850, it had probably doubled, owing, in a measure, to the impulse it has received from the discovery of gold in California.

We conclude this article by extracting first from a message of

Governor Lane to the Legislature of Oregon, and second, from a published letter of the Honorable Samuel R. Thurston, member of Congress from Oregon. They give valuable items respecting the soil, climate, and productions of the country. The foregoing statements on the same points, are derived mainly from Wilkes.

“We can recognize in Oregon the material of her future greatness; a climate and a soil extraordinarily productive, eminently characterize it; the prolific growth of grain, vegetables, and grapes; the natural meadows, untouched by the hand of civilization, sufficiently extensive to furnish subsistence to innumerable herds of cattle during the entire year. Inexhaustible forests of the finest fir and cedar in the world; never failing streams which furnish water-power of unlimited capacity, show how lavishly nature has bestowed her blessings upon this favored land. With the development of her agricultural resources, and the improvement of her immense water-power, she can supply the entire Pacific coast with the most important of the necessaries of life, and many of the staple articles of commerce. Her immense resources are gradually but surely being developed; her mineral wealth at present is not to be computed; gold has been found in several places, in sufficient quantities to induce the belief that there are mines, perhaps extensive ones, of this precious metal within the borders of our territory; iron, lead, and coal are known to exist, and the indications of their abundance are of the most flattering description.”

Mr. Thurston writes as follows: “Middle Oregon, that part between the President’s range or the Cascade Mountains and the Blue Mountains, not only has the reputation of being one of the finest grazing countries in the world, but is so, is susceptible of sustaining a dense population, and is ultimately destined to do so. The climate of Middle Oregon is, undoubtedly, the best in the world. While it is almost free from snows, it is subject to but moderate rains; while its long summers are one continued holiday of sporting sunshine, its winters are but moderately rainy. Its waters are nowhere to be surpassed for either coolness, purity, or flavor; and taken all in all, Middle Oregon is one of the fair spots of nature, but for ten or fifteen years to come, will not be needed for settlement. Western Oregon is amply large to swallow up all the emigrants who will find their way thither for a long time to come. This section can bid defiance to any other place within the limits of the United States. I must refrain from a description, because to do it justice would take more time than I have to devote.

“The productions of the two western divisions of Oregon, are such as are produced in any of the Northern States. As the country is never subject to hot weather, and its nights being cool, it follows, of course, that corn does not grow so spontaneously as in the Western States. Yet good crops of corn may be raised by attending to its cultivation as they do in New England. It should be borne in mind, however, that we have no particular

use for corn, as wheat, oats, barley, and rye can be raised much more abundantly and with less cost; yet, I have seen as stout corn growing there, as I ever did anywhere. For raising the other kinds of grains, those I have mentioned, and buckwheat, and peas, and beans, no country can surpass Oregon. And as to its vegetable productions, I venture nothing in saying, it can vie with any country.

“As to the general average of the thermometer in winter and summer, I am not able to say; but the weather is very temperate, alike in summer and winter. Oregon City is in latitude almost forty-six degrees north (about that of Montreal, Canada), and yet the river did not approximate to freezing over last winter (1849–50), though it was the coldest that had been for thirty years; and it is frequently the case, that vegetables grow in the garden the entire winter. While in the summer one has very little need of thin clothes, never is he subject to those hot days which cause him to take refuge in the shade, or oppressed with those sultry nights which take away his sleep, and sweat out his very life blood. Oregon is an extraordinarily healthy country. The climate is free from those sudden changes from heat to cold, from the oppressive, still, and sultry day to the warring elements of a tempest-riven evening. Wherever there is a sultry, impure, and pent up atmosphere, there are thunder-storms, tempests, and tornadoes. With these we are rarely visited. This, of itself, is evidence of the purity of our atmosphere, and, consequently, of the healthiness of our climate.

“We have two seasons, the wet and dry. The length of each is variable, the same as the summers and winters in the States. In the fall, we have an introduction of rain the last of September or the first of October, after which it clears off and continues fair for a time, varying from four to six weeks, when the winter or rainy season sets in. A very respectable proportion of the wet season is made up of fair days, days which are cloudy and have no rain at all, and days part clear and part cloudy, and days all the time cloudy, but during which it does not rain *to hurt*. This explains the true state of the weather. For two or three days it may rain steadily and hard, the streams rising high; then it will slack away, and continue for a week or more clear, cloudy and drizzling in turn, during which time our people attend to their business out of doors, plow, build fences, etc., without any inconvenience; and while doing it, it is not necessary to have our fringed mittens, buffalo robes, or ears tied up. It is warm and mild, and we work with healthy sinews and with pleasure, the song or whistle cheering on the plowman or axman, as *barehanded* and in his shirt sleeves, *in the dead of winter*, he pursues his pleasant labors. In March, the rains begin to slack away, the fair weather increases, and showers continue until April, and sometimes to May; but the rainy season may be said to close up in March. Our summer season, after the showers entirely cease, is

made up of continued sunshine, and star-bestudded and moonlight nights; for clouds rarely venture to our skies in the summer season. All concede that an Oregon summer is unrivaled in pleasantness and beauty."

CALIFORNIA.

THE word California is derived from two Spanish words, *caliente fornalla*, or *horno*, meaning in English *hot furnace*, which is a name appropriately applied, as the sun pours down in the valleys through a dry atmosphere with unmigated power, increased by reflection from the sides of the *canons* or gorges, and mountains, and surface of the streams.

California, under the Mexicans, was divided into two parts, respectively called Lower and Upper, or Alta California. Lower or Old California comprises the narrow peninsula lying between the gulf of the same name and the Pacific Ocean; Upper or New California comprised all of Mexico north of that point, which, in general terms, was bounded on the south by Lower California and the Gila River, north by Oregon, east by the Rocky Mountains, and west by the Pacific, being an immense tract of country, containing near four hundred thousand square miles, or nearly nine times that of the State of New York. By the treaty which ended the war with Mexico, that power ceded the whole of Upper California to the United States. It now includes the western part of New Mexico, which, by the Act of Congress in 1850, was extended westward beyond the Rocky Mountains, so as to include a large part of its southern half—the whole of the Mormon Territory of Utah or Deseret, and the State of California.

California was discovered in 1548 by Cabrillo, a Spanish navigator. In 1758, Sir Francis Drake visited its northern coast, and named the country New Albion. The original settlements in California were mission establishments, founded by Catholic priests for the conversion of the natives. In 1769, the mission of San Diego was founded by Padre Junipero Serra. In the succeeding thirteen years, at the close of which the good Padre died, he labored with indefatigable zeal, and founded nine missions, which were eventually increased by his successors to twenty-one in number.

The mission establishments were made of adobe, or sun-burnt bricks, and contained commodious habitations for the priests, store-houses, offices, mechanic shops, granaries, horse and cattle pens, and apartments for the instruction of Indian youth. Around and attached to each were, varying in different missions, from a few hundred to several thousand Indians, who generally resided in conical-shaped huts in the vicinity, their place of dwelling being generally called the *rancheria*. Attached to each mission were a few soldiers, for protection against hostilities from Indians.

The missions extended their possessions from one extremity of the territory to that of the other, and bounded the limits of one mission by that of the next, and so on. Though they did not require so much land for agriculture, and the maintenance of their stock, they appropriated the whole; always strongly opposing any individual who might wish to settle on any land between them.

All the missions were under the charge of the priests of the order of San Francisco. Each mission was under one of the fathers, who had despotic authority. The general products of the missions were large cattle, sheep, horses, Indian corn, beans and peas. Those in the southern part of California produced also the grape and olive in abundance. The most lucrative product was the large cattle, their hides and tallow affording an active commerce with foreign vessels, and being indeed the main support of the inhabitants of the territory.

From 1800 to 1830, the missions were in the height of their prosperity. Then each mission was a little principality, with its hundred thousand acres, and its twenty thousand head of cattle. All the Indian population, except the "Gentiles" of the mountains, were the subjects of the padres, cultivating for them their broad lands, and reverencing them with devout faith.

The spacious galleries, halls and court-yards of the missions exhibited every sign of order and good government, and from the long adobe houses flanking them, an obedient crowd came forth at the sound of morning and evening chimes. The tables of the padres were laden with the finest fruits and vegetables from their thrifty gardens and orchards, and flasks of excellent wine from their own vineyards. The stranger who came that way was entertained with a lavish hospitality, for which all recompense was proudly refused; and on leaving, was welcome to exchange his spent horse for his pick out of the cabadella. Nearly all the commerce of the country with other nations was in their hands. Long habits of management and economy gave them a great aptitude for business of all kinds, and each succeeding year witnessed an increase of their wealth and authority.

The wealth and power in possession of the missions, excited the jealousy of the Mexican authorities. In 1833, the government commenced a series of decrees, which eventually ruined them. They made them public property; converted them into parishes; and the padres, from being virtual sovereigns of their domains, became merely curates with only spiritual powers over their former subjects. They no longer could superintend the cultivation of the lands, and the Indians being deprived of their patient guidance, relapsed into habits of stupidity and abandoning the establishments, again resumed their roving life among the mountains. In 1845, the obliteration of the missions was completed by their sale at auction, and otherwise.

Aside from the missions, in California, the inhabitants were

nearly all gathered in the *presidios*, or forts, and in the villages, called "*Los Pueblos*."

The *presidios*, or fortresses, were occupied by a few troops under the command of a military prefect or governor. The object of these was to protect the country and the missions against the Indians. In early times, the commandants of these *presidios* were under the absolute control of the missions. The padre president, or bishop, was the supreme civil, military, and religious ruler of the province. There were four *presidios* in California, each of which had under its protection several missions. They were respectively, San Diego, Santa Barbara, Monterey, and San Francisco. These fortresses consisted of walls of unburnt brick, and were of a square shape, each side being about six hundred feet in length. Within the inclosure was a chapel, store-houses, and the dwelling of the commandant, while at the entrance, were the quarters of the officers and guard. These were always located at a seaport, and one or two miles from each; near the anchoring ground, were what were called *castillos*, or forts, where the cannon and ammunition were placed. At each *presidio*, the commandant had under him about eighty cavalry, a detachment of artillery, and some auxiliary troops.

Within four or five leagues of the *presidios*, were certain farms, called *ranchios*, which were assigned for the use of the garrison and as depositories of the cattle and grain which were furnished as taxes from the missions.

Los Pueblos, or towns, grew up near the missions. Their first inhabitants consisted of retired soldiers and attaches of the army, many of whom married Indian women. Of the villages of this description, there were but three, viz: Los Angeles, San Jose, and Branciforte. In later times, the American emigrants established one on the Bay of San Francisco, called Yerba Buena, *i. e.* good herb, which became the nucleus of the flourishing city of San Francisco. Another was established by Captain Sutter, on the Sacramento, called New Helvetia. The larger pueblos were under the government of an *alcalde*, or judge, in connection with other municipal officers.

The policy of the Catholic priests, who held absolute sway in California, until 1833, was to discourage emigration. Hence, up to about the year 1840, the villages named comprised all in California, independent of those at the missions; and at that time, the free whites and half-breed inhabitants in California numbered less than six thousand souls. The emigration from the United States first commenced in 1838; this had so increased from year to year, that in 1846, Colonel Fremont had but little difficulty in calling to his aid some five hundred fighting men. Some few resided in the towns, but a majority were upon the Sacramento, where they had immense droves of cattle and horses, and fine farms, in the working of which they were aided by the Indians. They were eminently an enterprising and courageous body of people, as none

other at that time would brave the perils of an overland journey across the mountains. In the ensuing hostilities they rendered important services.

At that period, the trade carried on at the different towns was quite extensive, and all kinds of dry goods, groceries, and hardware, owing to the heavy duties, ranged about five hundred per cent. above the prices in the United States. Mechanics and ordinary hands received from two to five dollars per day. The commerce was quite extensive, fifteen or twenty vessels not unfrequently being seen in the various ports at the same time. Most of the merchant vessels were from the United States, which arrived in the spring, and engaged in the coasting trade until about the beginning of winter, when they departed with cargoes of hides, tallow or furs, which had been collected during the previous year. Whale ships also touched at the ports for supplies and to trade, and vessels from various parts of Europe, the Sandwich Islands, the Russian settlements and China.

From 1826 to 1846, the date of its conquest, there had been numerous civil wars and revolutions in California; but generally Mexican authority had been exercised over it. Of its conquest by the United States, we give a brief account:

At the commencement of the war with Mexico, an American fleet had been sent to the coast of California, under Commodore Sloat, in anticipation of this event. On the 7th of July, 1846, Monterey, and on the 9th, San Francisco, were taken by the naval forces. On the 15th, the fleet was augmented by the arrival of Commodore Stockton with a frigate. On the 17th, Commodore Sloat dispatched a party to the mission of St. John, to obtain cannon and other munitions, deposited there by the enemy. At this place the American flag had already been planted by Fremont, whose movements in California, up to this period, we pause to relate.

In the fall preceding, Fremont started on his third expedition, and arrived in the latter part of January (1846), within a hundred miles of Monterey. He then left his party and proceeded to that place, and obtained permission from its commandant, General De Castro, to winter with his train in the Valley of the San Joaquin. No sooner, however, had he rejoined his party than he was warned by a messenger from Mr. Larkin, United States Consul at Monterey, that De Castro was about to raise the province against him. A number of the American settlers in the valley offered to assist him in his defense. Fearful of compromising them and his government, he declined their aid, and with rare determination and bravery, marched his small party of sixty-two men within thirty miles of Monterey, took a strong position in the mountains, hoisted the American flag, and prepared for resistance. But an approach was all that De Castro attempted; and having remained sometime, and finding no probability of an attack, Fremont started in the month of March for Oregon.

On the 9th of May he was overtaken by Lieutenant Gillespie, of the marines, who bore a letter of introduction from Mr. Buchanan, the Secretary of State, and private letters from Senator Benton. From certain passages in the letter, Fremont inferred that the government desired that he should ascertain and counteract any schemes which foreigners might have in relation to the Californias. This, with verbal information from Gillespie, determined him to return to the settled vicinity of the Sacramento.

Upon arriving at the Bay of San Francisco, Fremont learning that De Castro was preparing an expedition at Sonoma, to expel the American settlers from the territory, determined to overthrow the Mexican authority in California. On the 11th of June, Fremont seized and drove off two hundred horses on the way to De Castro's camp, and on the 15th, surprised Sonoma, where he captured General Vallejo and other officers, nine cannon, two hundred and fifty muskets, and a quantity of military stores. Shortly after, De Castro meditated an attack on Sonoma; but his advance guard of ninety men being defeated by twenty Americans, and having suffered other losses, he retreated to the south.

On the 4th of July, Fremont having assembled the American settlers at Sonoma, advised them, as their only safety, to declare independence of Mexico, and prosecute the war. They followed his advice, and the *revolutionary flag* was at once displayed. Meanwhile, the events of the war, of the existence of which Fremont had been ignorant, had become known to Commodore Sloat, and that officer had commenced taking possession of the towns on the coast. The news of the acts of the naval commander was received by the revolutionists soon after their declaration of independence. The American flag was at once substituted for the standard of revolt, and Fremont proceeded with his party, now reinforced by American settlers, to Monterey.

Commodore Stockton constituted the one hundred and sixty men, under Fremont, a naval battalion, which sailed to San Diego, where, united to the marines, they marched up and occupied Los Angeles, the seat of government. Here Stockton established a civil government and proclaimed himself governor. The commanders went north, leaving a small garrison under Captain Gillespie. In September, a Mexican force under General Flores and Don Pico led in a revolt and attacked Angeles. Captain Mervine with marines from the Savannah, lying off the harbor, attempted to relieve the garrison, but was driven back, and Gillespie was forced to capitulate to a far superior enemy. Ere this was known, Commodore Stockton, deeming California as conquered, had sailed for the southern Mexican ports. Fremont, who was still in the country, soon recruited his battalion from the American Californians, and then marched south to co-operate in reconquering the country.

General Kearney having established a new government in New Mexico, on the 25th of September, departed from Santa Fe, at the

head of four hundred dragoons, for California; but after having proceeded some distance down the Rio Grande, he was met by an express from Fremont, that California was already conquered. He thereupon sent back his main force; continuing on with an escort of one hundred men, he crossed the Rio Grande in latitude thirty-three degrees, on the 20th of October, struck the River Gila at the copper mines, and arrived at its junction with the Colorado on the 22d of November. From this point he followed on, or near the Colorado, forty miles, and from thence westerly sixty miles through an arid desert. On the 2d of December he reached Wamas village, the frontier settlement. On the 5th, he was met near San Diego by Captain Gillespie, sent to him with thirty-six men by Commodore Stockton. The next day, an advance party of twelve dragoons and thirty volunteers had an encounter with one hundred and sixty mounted Californians near San Pasqual. The Americans were victorious, but these northern Mexicans sold victory at a dearer rate than their southern countrymen. Kearney was twice wounded, Captains Johnson and Moore, and Lieutenant Hammond and most of the remaining officers were either killed or wounded, with nineteen of the men.

Kearney reached San Diego on the 12th of December. On the 29th, by request of Stockton, Kearney took command of five hundred marines, with the land forces, and moved toward Angeles to co-operate with Colonel Fremont in quelling the revolt, now backed by a Mexican army of six hundred Mexicans under Generals Flores and Pico. These forces he met and defeated at San Gabriel on the 8th of January. The next day he again fought and routed them at Mesa. The Mexicans then marched twelve miles past Angeles to Cowenga, where they capitulated to Colonel Fremont, who had, after a tedious wintry march from the north of four hundred miles, arrived at that place.

On the 16th of January, Commodore Stockton commissioned Fremont as governor, the duties of which he had discharged about six weeks, when General Kearney, according to orders received from government, assumed the office and title of Governor of California. Commodore Shubrick, who was now the naval commander, co-operated with Kearney, whose forces were augmented about the last of January by the arrival of Colonel Cooke with the Mormon battalion, which had marched from Council Bluffs to Santa Fe. From thence Colonel Cooke proceeded down the Rio Grande; then sending back his sick to the Arkansas (where were nine hundred Mormon families on their way to the Salt Lake), he took a route which deviated to the south of Kearney's, into the interior of Mexico and through a better and more interesting country.

General Kearney, by direction of government, placing Colonel Mason in the office of governor, on the 16th of June took his way homeward across the northern part of California, and thence crossed the Rocky Mountains through the South Pass. He was

accompanied by Colonels Fremont and Cooke, and other officers and privates to the number of about forty.

Before the news of peace was received in California a new era commenced in the discovery of the gold mines. The peculiar state of affairs brought about by this, with the great rush of population, was such that the people were in a measure compelled to form a constitution of State Government. The convention for this purpose met at Monterey in 1849, and on the 12th of October formed the constitution, which was adopted by the people. After much delay California was admitted into the Union by action of Congress, in September, 1850.

The population of California at the commencement of the summer of 1848, the era of the gold discovery, was estimated at about thirty thousand, viz: eight thousand Mexicans, twelve thousand Christianized Indians, and ten thousand Americans.

CALIFORNIA, the most western State of the Union, is about seven hundred and fifty miles long, with an average breadth of about two hundred miles, giving an area of 150,000 square miles. Its southern boundary approximates in latitude to that of Charleston, South Carolina; its northern to that of Boston, Massachusetts. This, with its variation of surface, gives it a diversity of climate and consequently of productions. Geographically, its position is one of the best in the world, lying on the Pacific fronting Asia.

California is a country of mountains and valleys. The principal mountain is the Sierra Nevada, *i. e.* Snowy Mountain. This Sierra is part of the great mountain range which, under different names, extends from the peninsula of California to Russian America. In Oregon it is called President's range and also the Cascade Mountains. This range is remarkable for its length, its being parallel to the sea coast, its great elevation, often more lofty than the Rocky Mountains, and its many grand volcanic peaks, reaching high into the region of perpetual snow. Rising singly, like pyramids, from heavily timbered plateaux to the height of fourteen and seventeen thousand feet above the ocean, these snowy peaks constitute the characterizing feature of the range, and distinguish it from the Rocky Mountains and all others on our part of the continent. The Sierra Nevada is the grandest feature of the scenery of California, and must be well understood before the structure of the country and the character of its different divisions can be comprehended. Stretching along the coast, and at the general distance of one hundred and fifty miles from it, this great mountain wall receives the warm winds, charged with vapor, which sweep across the Pacific Ocean, precipitates their accumulated moisture in fertilizing rains and snows upon its western flank, and leaves cold and dry winds to pass on to the east. The region east of the Sierra is comparatively barren and cold, and the climates are distinct. Thus, while in December the eastern side is winter, the ground being covered with snow and the rivers frozen, on the west it is spring, the air being soft, and the grass fresh and green.

West of the Sierra Nevada is the inhabitable part of California. North and south, this region extends about ten degrees of latitude, from Oregon to the peninsula of California. East and west it averages, in the middle part, one hundred and fifty, and in the northern part, two hundred miles, giving an area of about 100,000 square miles. Looking westward from the summit, the main feature presented is the long, low, broad Valley of the Joaquin and Sacramento Rivers—the two valleys forming one, five hundred miles long, and fifty broad, lying along the base of the Sierra, and bounded on the west by the low coast range of mountains, which separates it from the sea. Side ranges, parallel to the Sierra and the coast, make the structure of the remainder of California, and break it into a surface of valleys and mountains—the valleys a few hundred, and the mountains two or three thousand feet above the sea. These form great masses, and at the north become more elevated, where some peaks, as the Shasta—which rises fourteen thousand feet, nearly to the height of Mont Blanc—enter the region of perpetual snow.

The two rivers San Joaquin and Sacramento, rising at opposite ends of the same great valley, receive their numerous streams, many of them bold rivers, unite half way and enter the Bay of San Francisco together.

The Bay of San Francisco is celebrated as one of the finest in the world, and is on the same latitude with that of Lisbon. Its connection with the great interior valley, being the only water communication with it, together with its easy communication with Asia, gives it vast commercial advantages. Approaching it from the sea, the coast presents a bold mountainous outline. The bay is entered by a strait running east and west, about a mile broad at its narrowest part, and five miles long from the ocean, when it opens to the north and south, in each direction more than thirty miles. It is divided by straits and projecting points, into three separate bays, the two northern being called San Pabloon and Suisun, and the southern, San Francisco. The strait is called the "Golden Gate," on the same principle that the harbor of Constantinople was called the "Golden Horn," viz: its advantages for commerce. The Golden Gate is appropriately alluded to in the following verse of the "Jenny Lind Prize Song:"

*"I greet in that language, the Land of the West,
Whose Banner of Stars o'er a world is unrolled,
Whose Empire o'ershadows Atlantic's wide breast,
And opes to the sunset its gateway of gold!"*

Climate.—California is remarkable in its periodical changes, and for the long continuance of the wet and dry seasons, dividing, as they do, the year into about two equal parts, which have a most peculiar influence on the labor applied to agriculture, and the products of the soil, and, in fact, connect themselves inseparably with

all the interests of the country, and exercise a controlling influence on its commercial prosperity and resources.

The *dry season* commences first, and continues longest in the southern portions of the State; and as low down as latitude thirty-eight degrees, rains are sufficiently frequent in summer to render irrigation quite unnecessary to the perfect maturity of any crop which is suited to the soil and climate.

Below latitude thirty-nine, and west of the foot-hills of the Sierra Nevada, the forests of California are limited to some scattering groves of oak in the valleys and along the borders of the streams, and of red-wood on the ridges and in the gorges of the hills—sometimes extending into the plains. Some of the hills are covered with dwarf shrubs, which may be used as fuel. With these exceptions, the whole territory presents a surface without trees or shrubbery. It is covered, however, with various species of grass, and for many miles from the coast with wild oats, which, in the valleys, grows most luxuriantly. These grasses and oats mature and ripen early in the dry season, and soon cease to protect the soil from the scorching rays of the sun. As the summer advances, the moisture in the atmosphere and the earth, to a considerable depth, soon becomes exhausted; and the radiation of heat, from the extensive naked plains and hill-sides, is very great.

The cold, dry currents of air from the northeast, after passing the Rocky Mountains and the Sierra Nevada, descend to the Pacific and absorb the moisture of the atmosphere to a great distance from the land. The cold air from the mountains, and that which accompanies the great ocean current from the northwest, thus become united, and vast banks of fog are generated, which, when driven by the wind, has a penetrating or *cutting* effect on the human skin, much more uncomfortable than would be felt in the humid atmosphere of the Atlantic, at a much lower temperature.

As the sun rises from day to day, week after week, and month after month, in unclouded brightness during the dry season, and pours down his unbroken rays on the dry, unprotected surface of the country, the heat becomes so much greater inland than it is on the ocean, that an under-current of cold air, bringing the fog with it, rushes over the coast range of hills, and through their numerous passes, toward the interior.

Every day as the heat, inland, attains a sufficient temperature, the cold, dry wind from the ocean commences to blow. This is usually from eleven to one o'clock; and as the day advances, the wind increases, and continues to blow until late at night. When the vacuum is filled, or the equilibrium of the atmosphere restored, the wind ceases; a perfect calm prevails until about the same hour the following day, when the same process commences and progresses as before, and these phenomena are of daily occurrence, with few exceptions, throughout the dry season.

These cold winds and fogs render the climate at San Francisco, and all along the coast of California, except the extreme southern

portion of it, probably more uncomfortable, to those not accustomed to it, in summer than in winter.

A few miles inland, where the heat of the sun modifies and softens the winds from the ocean, the climate is moderate and delightful. The heat, in the middle of the day, is not so great as to retard labor, or render exercise in the open air uncomfortable. The nights are cool and pleasant. This description of climate prevails in all the valleys along the coast range, and extends throughout the country, north and south, as far eastward as the Valley of the Sacramento and San Joaquin. In this vast plain the sea-breeze loses its influence, and the degree of heat in the middle of the day, during the summer months, is much greater than is known on the Atlantic coast in the same latitudes. It is dry, however, and probably not more oppressive. On the foothills of the Sierra Nevada, and especially in the deep ravines of the streams, the thermometer frequently ranges from one hundred and ten degrees to one hundred and fifteen in the shade, during the three or four hours of the day, say from eleven until three o'clock. In the evening, as the sun declines, the radiation of heat ceases. The cool, dry atmosphere from the mountains, spreads over the whole country, and renders the nights cool and invigorating.

These variations of the climate of California account for the various and conflicting opinions and statements respecting it.

A stranger arriving at San Francisco in summer, is annoyed by the cold winds and fogs, and pronounces the climate intolerable. A few months will modify, if not banish his dislike, and he will not fail to appreciate the beneficial effects of a cool, bracing atmosphere. Those who approach California overland, through the passes of the mountains, find the heat of summer, in the middle of the day, greater than they have been accustomed to, and therefore many complain of it.

Those who take up their residence in the valleys which are situated between the great plain of the Sacramento and San Joaquin and the coast range of hills, find the climate, especially in the dry season, as healthful and pleasant as it is possible for any climate to be which possesses sufficient heat to mature the cereal grains and edible roots of the temperate zone.

The division of the year into two distinct seasons, dry and wet, impresses unfavorably those who have been accustomed to the variable climate of the Atlantic States. The dry appearance of the country in summer, and the difficulty of moving about in winter, seem to impose serious difficulties in the way of agricultural prosperity, while the many and decided advantages resulting from the mildness of winter, and the bright, clear weather of summer, are not appreciated.

Soil.—The valleys which are situated parallel to the coast range, and those which extend eastwardly in all directions among the

hills, toward the great plain of the Sacramento, are of unsurpassed fertility.

They have a deep black alluvial soil, which has the appearance of having been deposited when they were covered with water. The land in the northern part of the territory, on the Trinity and other rivers, and on the borders of Clear Lake, as far as it has been examined, is said to be remarkably fertile.

The great Valley of the Sacramento and San Joaquin has evidently been, at some remote period, the bed of a lake. The soil is very rich, and with a proper system of drainage and embankment, would undoubtedly be capable of producing any crop, except sugarcane, now cultivated in the Atlantic States of the Union.

There are many beautiful valleys and rich hill-sides among the foot-hills of the Sierra Nevada, and a rich belt of well timbered and watered country extending the whole length of the gold region between it and the Sierra Nevada, some twenty miles in width.

The soil described, situated west of the Sierra Nevada, and embracing the plain of the Sacramento and San Joaquin, covers an area of about sixty thousand square miles, and would, under a proper system of cultivation, be capable of supporting a population of two or three millions.

Products.—Previous to the treaty of peace with Mexico, and the discovery of gold, the exportable products of the country consisted almost exclusively of hides and tallow. The Californians were a pastoral people, and paid much more attention to the raising of horses and cattle than the cultivation of the soil.

The climate and soil of California are well suited to the growth of wheat, barley, rye and oats. The temperature along the coast is too cool for the successful culture of maize as a field crop. The fact that oats, the species which is cultivated in the Atlantic States, are annually self-sowed and produced on all the plains and hills along the coast, and as far inland as the sea-breeze has a marked influence on the climate, is sufficient proof that all the cereal grains may be successfully cultivated without the aid of *irrigation*. In the rich alluvial valleys, wheat and barley have produced from forty to sixty bushels from one bushel of seed, *without irrigation*.

Irish potatoes, turnips, onions, in fact all the edible roots known and cultivated in the Atlantic States, are produced in great perfection. In all the valleys east of the coast range of hills, the climate is sufficiently warm to mature crops of Indian corn, rice, and probably tobacco.

The cultivation of the grape has been attended with much success wherever it has been attempted. The dry season secures the fruit from those diseases which are so common in the Atlantic States, and it attains very great perfection. The wine made from it is of excellent quality, very palatable, and can be produced in any quantity. The grapes are delicious, and produced with very little labor.

Apples, pears and peaches are cultivated with facility, and there is no reason to doubt that all the fruits of the Atlantic States can be produced in great plenty and perfection.

The grasses are very luxuriant and nutritious, affording excellent pasture. The oats, which spring up the whole length of the sea-coast, and from forty to sixty miles inland, render the cultivation of that crop entirely unnecessary, and yield a very great quantity of nutritious food for horses, cattle and sheep. The dry season matures and cures these grasses and oats, so that they remain in an excellent state of preservation during the summer and autumn, and afford an ample supply of forage. While the whole surface of the country appears parched and vegetation destroyed, the numerous flocks and herds which roam over it continue in excellent condition.

Although the mildness of the winter months and the fertility of the soil secure to California very decided agricultural advantages, *irrigation* would greatly increase the products of the soil in quantity and variety during the greater part of the dry season.

A system of drainage, which would also secure irrigation, is absolutely necessary to give value to the great plain of the Sacramento and San Joaquin. This valley is so extensive and level, that if the rivers passing through it were never to overflow their banks, the rain which falls in winter would render a greater portion of it unfit for cultivation. The foundation of such a system can only be established in the survey and sale of the land. This can be done by laying out canals and drains at suitable distances, and in proper directions, and leaving wide margins to the rivers, that they may have plenty of room to increase their channels when their waters shall be confined within them by embankments.

The farmer derives some very important benefits from the dry season. His crops in harvest-time are never injured by rain; he can with perfect confidence permit them to remain in his fields as long after they have been gathered as his convenience may require; he has no fears that they will be injured by wet or unfavorable weather. Hence it is that many who have long been accustomed to that climate prefer it to the changeable weather east of the Rocky Mountains.

As already stated, the forests of California, south of latitude thirty-nine degrees, and west of the foot-hills of the Sierra Nevada, are limited to detached, scattering groves of oak in the valleys, and of red-wood on the ridges and on the gorges of the hills.

When the dry season sets in, the entire surface is covered with a luxuriant growth of grass and oats, which, as the summer advances, become perfectly dry. The remains of all dead trees and shrubs also become dry. These materials, therefore, are very combustible, and usually take fire in the latter part of summer and beginning of autumn, which commonly passes over the whole country, destroying in its course the young shrubs and trees. In fact, it seems

to be the same process which has destroyed or prevented the growth of forest trees on the prairies of the Western States, and not any quality in the soil unfriendly to their growth.

The absence of timber and the continuance of the dry season are apt to be regarded by farmers on first going into the country, as irremediable defects, and as presenting obstacles almost insurmountable to the successful progress of agriculture. A little experience will modify these opinions.

It is soon ascertained that the soil will produce abundantly without manure; that flocks and herds sustain themselves through the winter without being fed at the farm-yard, and, consequently, no labor is necessary to provide forage for them; that ditches are easily dug, which present very good barriers for the protection of crops, until live fences can be planted and have time to grow. Forest trees may be planted with little labor, and in very few years attain a sufficient size for building and fencing purposes. Time may be usefully employed in sowing various grain and root crops during the wet or winter season. There is no weather cold enough to destroy root crops, and, therefore, it is not necessary to gather them. They can be used or sold from the field where they grow. The labor, therefore, required in most of the old States to fell the forests, clear the land of rubbish, and prepare it for seed, may here be applied to other objects.

All these things, together with the perfect security of all crops in harvest-time, from injury by wet weather, are probably sufficient to meet any expense which may be incurred in irrigation, or caused for a time, by a scanty supply of timber.

In the northern part of the territory, above latitude thirty-nine degrees, and on the hills, which rise from the great plain of the Sacramento and San Joaquin, to the foot of the Sierra Nevada, the forests of timber are beautiful and extensive, and would, if brought into use, be sufficiently productive to supply the wants of the southern and western portions of the State.

The preceding description of the climate, soil, and productions of California, is from the report of the Hon. T. Butler King. Much of it relates to the great valley east of the Sierra Nevada. This is undeniably, to strangers, a disagreeable residence, nor will it ever be a theater of extensive agriculture, until some grand system of irrigation is adopted. Not so with the more southern valleys near the coast, as San Jose, Sonoma, Napie, and Los Angeles. These valleys possess delightful climates, and the garden vegetables there produced, exceed anything in the States. The best of them for soil, climate, and facilities for irrigation, is the extreme southern valley of Los Angeles, which is from sixty to one hundred miles in extent. All kinds of fruits, both of the torrid and temperate zones, grow there. It is extremely healthy, with a delightful climate and good soil, with springs gushing out from the mountains, which furnish facilities for irrigating the

whole valley. In the Valley of San Jose, the land is as dear as that of the older States of the Union.

The Gold Regions.—Captain J. A. Sutter, a native of Switzerland, who had resided in California since the year 1838, and carried on extensive agricultural operations with the aid of Indians, in the vicinity of the fort, near the site of Sacramento City, feeling the great want of lumber, contracted with a Mr. Marshall, in the fall of 1847, to build him a saw-mill in the broken and mountainous country which is covered with pine forests on the south fork of the American River, about seventy miles easterly from his fort. By the spring, a dam and race had been constructed; the laborers being formerly members of the Mormon battalion, then disbanded. When the water was let on the wheels, the lower part of the race was found too narrow to permit the water to escape with sufficient rapidity, and Mr. Marshall, to save labor, let the water from the river directly into the race with a strong current, so as to wash it wider and deeper. He effected his purpose, and a large bed of mud and gravel was carried to the end of the race. About the last of May, 1848, as Mr. Marshall was walking down the race, he observed some glittering particles at its upper edge; he gathered a few, examined them, and became satisfied of their value. He then went to Sutter's Fort, and informed the captain of his discovery, which they agreed to keep secret until a certain grist-mill of Sutter's was finished. It, however, got out and spread like magic. Remarkable success attended the labors of the first explorers, and in about three months, upward of four thousand people were at work there. The town of Culloma was subsequently built upon the same spot.

Further explorations showed that these deposits of gold extended over a vast extent of country. The discovery of the gold, at once changed the character of California. Its people, before engaged in cultivating small patches of ground, and guarding their herds of cattle and horses, flocked to the mines. The laborers left their work, the tradesmen their shops, the soldiers deserted from the forts, and the sailors ran away from their ships.

Information of this discovery spread in all directions during the following winter; and on the commencement of the dry season in 1849, people came into California from all quarters—from the Pacific coast of Mexico and South America, the Sandwich Islands, China and New Holland. The American emigration by sea, did not come in much force until July and August; and that overland, did not arrive until about the 1st of September.

The Chilians and Mexicans were early in the country. In July, it is supposed, there were fifteen thousand foreigners in the mines. At a place called Sonorian camp, on the Toulumne, it is believed there were ten thousand Mexicans. They had quite a city of booths, tents, and log-cabins; hotels, restaurants, stores, and shops of all descriptions, furnished whatever money could procure. Ice was brought from the Sierra, and ice creams added

THE GOLD DIGGIN'S.

"The thirst for gold and the labor of acquisition, overruled all else, and totally absorbed every faculty. Complete silence reigned among the miners; they addressed not a word to each other, and seemed averse to all conversation."

to numerous other luxuries. An inclosure made of the trunks and branches of trees, and lined with cotton cloth, served as a sort of amphitheater for bull fights; and other amusements, characteristic of the Mexicans, were seen in all directions.

The foreigners resorted principally to the southern mines; the Americans to the northern. As the latter increased, they spread themselves over the southern mines, and, either from fear of threatened collisions, or from having satisfied their cupidity, two-thirds of the foreigners soon after left the country. The first season, the laborers averaged about one ounce per day. It is estimated that during the first two years, 1848 and 1849, that gold to the value of about forty millions of dollars was collected, one-half of which was probably gathered and carried out of the country by foreigners.

The principal gold region of California is about five hundred miles long, and from forty to fifty miles broad, following the line of the Sierra Nevada. It embraces within its limits those extensive ranges of hills which rise on the eastern border of the plain of the Sacramento and San Joaquin, and, extending eastwardly from fifty to sixty miles, they attain an elevation of about four thousand feet, and terminate at the base of the main ridge of the Sierra Nevada. There are numerous streams which have their sources in the springs of the Sierra, and receive the water from its melting snows, and that which falls in rain during the wet season. These streams form rivers, which have cut their channels through the ranges of foot-hills westwardly to the plain, and disembogue into the Sacramento and San Joaquin. These rivers are from ten to fifteen, and probably some of them twenty miles apart.

The principal formation or substratum in these hills is talcose slate; the superstratum, sometimes penetrating to a great depth, is quartz. This, however, does not cover the entire face of the country, but extends in large bodies in various directions—is found in masses and small fragments on the surface, and seen along the ravines, and in the mountains overhanging the rivers, and in the hill-sides in its original beds. It crops out in the valleys and on the tops of the hills, and forms a striking feature of the entire country over which it extends. From innumerable evidences and indications, it has come to be the universally admitted opinion among the miners and intelligent men who have examined this region, that the gold, whether in detached particles and in pieces, or in veins, was created in combination with the quartz. Gold is not found on the surface of the country, presenting the appearance of having been thrown up and scattered in all directions, by volcanic action. It is only found in particular localities, and attended by peculiar circumstances and indications. It is found in the bars and shoals of the rivers, in ravines, and in what are called the dry diggings.

The rivers, in forming their channels, or breaking their way through the hills, have come in contact with the quartz containing

the gold veins, and by constant attrition cut the gold into fine flakes and dust, and it is found among the sand and gravel of their beds at those places where the swiftness of the current reduces it, in the dry season, to the narrowest possible limits, and where a wide margin is consequently left on each side, over which the water rushes, during the wet season, with great force. As the velocity of some streams is greater than others, so is the gold found in fine or coarse particles, apparently corresponding to the degree of attrition to which it has been exposed. The water from the hills and upper valleys, in finding its way to the rivers, has cut deep ravines, and wherever it came in contact with the quartz, has dissolved or crumbled it in pieces.

In the dry season, these channels are mostly without water, and gold is found in the beds and margins of many of them in large quantities, but in a much coarser state than in the rivers, owing undoubtedly to the moderate flow and temporary continuance of the current, which has reduced it to smooth shapes, not unlike pebbles, but had not sufficient force to reduce it to flakes or dust.

The dry diggings are places where quartz containing gold has cropped out, and been disintegrated, crumbled to fragments, pebbles and dust, by the action of water and the atmosphere. The gold has been left as it was made, in all imaginable shapes; in pieces of all sizes, from one grain to several pounds in weight. The evidences that it was created in combination with quartz are too numerous and striking to admit of doubt or cavil. They are found in combination in large quantities. A very large proportion of the pieces of gold found in these situations have more or less quartz adhering to them. In many specimens, they are so combined that they cannot be separated without reducing the whole mass to powder, and subjecting it to the action of quicksilver. This gold, not having been exposed to the attrition of a strong current of water, retains, in a great degree, its original conformation. These diggings, in some places, are spread over valleys of considerable extent, which have the appearance of alluvion, formed by washings from the adjoining hills of decomposed quartz and slate earth, and vegetable matter.

In addition to these facts, it is beyond doubt true that several vein-mines have been found, showing the minute connection between the gold and the rock, and indicating a value hitherto unknown in gold-mining. These veins do not present the appearance of places where gold may have been lodged by some violent eruption. It is combined with the quartz in all imaginable forms and degrees of richness.

The rivers present very striking and, it would seem, conclusive evidence respecting the quantity of gold remaining undiscovered in the quartz-veins. It is not probable that the gold in the dry diggings, and that in the rivers—the former in lumps, the latter in dust—was created by different processes. That which is found in the rivers has undoubtedly been cut or worn from the veins in the

rock, with which their currents have come in contact. All of them appear to be equally rich. This is shown by the fact that a laboring man may collect nearly as much in one river as he can in another. They intersect and cut through the gold region, running from east to west, at irregular distances of fifteen to twenty, and perhaps some of them thirty miles apart.

Hence it appears that the gold veins are equally rich in all parts of that most remarkable section of country. Were it wanting, there are further proofs of this in the ravines and dry diggings, which uniformly confirm what nature so plainly shows in the rivers.

About two hundred miles west of Los Angeles; near the *Spanish Trail*—indicated by the dotted line on the map in this volume—is the celebrated *Gold Mountain*, which yields from two dollars and fifty cents to ten dollars in value to a pound of rock. The mountain is about four hundred and fifty feet in height, forming the side of a deep gorge or *canon*, and extends one-fourth of a mile. The region about it is a sterile desert, infested by immense numbers of rattlesnakes, with no water, except that which is poisonous, within sixteen miles. The vast and unexplored country between the San Joaquin and the Colorado will probably become the great theater of mining in a short time. It is known to be a gold region, and it abounds also in silver and copper. The Desert Mine, in the Gold Mountain, is worked by a company. As the surface gold of California is becoming, to a certain extent, exhausted, companies are forming to prosecute the business by the use of machinery of every kind. The following description of the method adopted for collecting the gold, together with a sketch of life in the mines, we give in the language of a gentleman who was at the mines on the Sacramento in the summer of 1849.

Arriving on the *bar*, the scene presented to us was new indeed, and not more extraordinary than impressive. Some, with long-handled shovels, delved among clumps, of bushes, or by the side of large rocks, never raising their eyes for an instant; others, with pick and shovel, worked among stone and gravel, or with trowels searched under banks and roots of trees, where, if rewarded with small lumps of gold, the eye shone brighter for an instant, when the search was immediately and more ardently resumed. At the edge of the stream, or knee-deep and waist-deep in water, as cold as melted ice and snow could make it, some were washing gold with tin-pans, or the common cradle-rocker, while the rays of the sun were pouring down on their heads with an intensity exceeding anything we ever experienced at home, though it was but the middle of April.

The thirst for gold and the labor of acquisition overruled all else, and totally absorbed every faculty. Complete silence reigned among the miners; they addressed not a word to each other, and seemed averse to all conversation. All the sympathies of our common humanity, all the finer and nobler attributes of our

nature seemed lost, buried beneath the soil they were eagerly delving, or swept away with the rushing waters that revealed the shining treasure.

The "*placer*," or bar, is simply the higher portion of the sandy and rocky bed of the stream, which, during the seasons of high water, is covered with the rushing torrent, but was now partially or entirely exposed. This is covered with large stones and rocks, or on the smooth sand with clumps of bushes or trees. Selecting a spot, we inquired of those nearest whether any other "diggers" claimed a prior possession; and such not being the case, we went to work. First fixing our machine firmly at the edge of the stream, we dug and carried down a pile of earth to be washed; and when sufficient was collected, one filled the machine with earth and kept it in motion, while the other supplied it with water. Getting but a small quantity of gold at that spot, we waded through a little inlet to another part of the bar nearer the stream, and our labors not being well rewarded here, we again shipped our position nearer the other miners. There we fixed upon the edge of a bank, where the ground had been broken by an old miner and deserted. Digging through about a foot of sand and stones, which we rejected, we came to a clay deposit mixed with sand; with this we filled the buckets, and carried it to the machine. The upper or sandy layer contains no gold, but the gold grains, by their weight, and the action of the water, sift through this into the clay, where they are found, until the blue clay or granite formation is reached, which, in these *diggings*, is generally three to four feet; but in some of the others the miners dig ten or fifteen feet. It was now mid-day, and the heat of the sun was quite intolerable to all but salamanders; and finding in our machines about four dollars value of gold to the twenty bucketsful of earth, we discontinued our labors for that day.

It is to be remembered, however, that this was, by no means, what was considered rich earth, which can only be got at when the streams are lowest, and the *bars* fully exposed. While on this *bar* we carefully noticed the operations of experienced diggers and miners, and were soon convinced of the superior utility of the pan and common wooden rocker for washing gold in California.

The *rocker* is simply a wooden cradle, the same as a child's cradle, except that the back rocker is higher than the front one, thus forming an inclined plane of the bottom, across which two or three wooden cleets are nailed a foot apart. Over the top is a grating or tin sieve to catch the pebbles and coarse sand; on this the earth and water is thrown, while the cradle is worked by a long handle or lever at the side, and the gold lodges on the bottom on the upper side of the cleets, the lower end of the table being open for the escape of the earth and water. These rockers were of different sizes; some could be worked by one man, and others requiring five. At the close of the day's work the gold is removed, and there is no interruption for this purpose during the day. The common

tin-pan is everywhere necessary and useful, and on some of the most inaccessible *bars* in the deepest *canons* of the mountains, no other washer can be transported or used.

The *bars*, like the one just described, are denominated the *wet diggings*, and are generally in the deep *canons* of the mountains. A *canon* is the narrow opening between two mountains, several hundred, and sometimes several thousand feet in depth; rising some of them like perpendicular cliffs on either hand, as if torn asunder by a violent convulsion of nature. Through these pour the rushing mountain torrents of the *wet diggings* of the gold regions of California.

Some of our party visited the *dry diggings* of the ravines and *gulches* of the sides of the mountains. A *gulch* differs from a common ravine in being more steep, abrupt, and inaccessible. The sound of *gulch* is like that of a sudden plunge into a deep hole, which is just the character of the thing itself. The gold obtained there is chiefly by *washing* the red clay with a pan, in the pools of the ravines, formed by the rainy season, or in some little mountain rivulet, often several hundred yards from the spot where the earth is obtained.

The crevices of the white-veined quartz works also furnished gold in lumps nearly pure, or mixed with the quartz; and a good deal is extracted in this way by the common butcher or sailor's sheath-knife, which is best for the purpose. Not near as much gold, however, is thus obtained as has been commonly supposed. The faces, hairs, brows, and eyelashes of the miners in the *dry diggings* become continually plastered with the red clay, in which they work and wash. India-rubber aprons are some protection, but the boots of that material soon cut on the rocks; and, in fact, a deer-skin suit, with fisherman's boots, furnish the best clothing a miner can possibly have.

In the dry diggings during the summer, the great difficulty the miner has to contend with, is scarcity of water. The finding of ever so small a spring is then an important event, and if near the rich diggings, the water is frequently sold as high as from a half to one dollar a pailful. A ditch is then dug as near the spring as possible, five or six feet wide, and three or four deep; across this logs are laid, on which the rocker is placed. The miner then carries or packs a pile of the earth to the side of the trench, where, having secured a supply of water, he is able, by the use of buckets and pans, to save a portion of it as it runs off from his cradle. Many employ their time in summer simply to collect the earth, to be washed in the rainy or winter season, when the watery element is by no means scarce.

Returning to camp, we renewed our trading, witnessing on some days illustrations of *life in the gold diggings*. Miners were continually coming in from different *diggings*, to expend a part or all of their gold on what they term "*a burst*;" which is a constant revel, night and day, for three or four days, and often a week at a

time. Drinking brandy at eight dollars, and champaign at sixteen dollars a bottle, as freely as water, they wandered and roved about from groggery to store, and store to tent, wild with intoxication, brandishing bowie-knives in sport, or shooting with the rifle at any mark they fancied, with the ball often but half home, and the rammer in. Others would leap into the saddle, and yelling with excitement, gallop furiously in every direction, regardless of all obstacles, frequently being thrown and nearly killed. Profanity of the vilest description—oaths, such as we never conceived could be uttered by human lips, incessantly filled the air. The deep disgust we experienced at the revolting profanity of life in the gold diggings, we can never forget.

With some of the men, who appeared good natured in their excesses, we ventured to remonstrate. We said: "This digging gold is toilsome and hard labor, why do you not try and keep some for a rainy day?" And their reply was: "Oh! we know where there's plenty more, and when we want it, we can dig it."

Among all the roving and reckless characters by whom we were surrounded, were two special curiosities, named Bill and Gus. Now, Bill and Gus had come over from the Middle Fork for a particular, general, and universal "burst." Being well known diggers, they had not only plenty of the dust, but when that was gone, they had abundant credit, both at the traders and groggeries. As bosom friends, they never were apart, and with hearts softened by the fumes of liquor, they loved all around them, attaching themselves as fixtures to our tent. This was annoying, but like many other things in California, must be borne. Bill was as wiry as an Indian, and with his jet locks and furtive eyes, resembled one not a little; while Gus, with his sleek and rounded limbs, was like an elder uncle to him. One of our party, after being strongly solicited, sold Bill a bottle of French brandy, laid in for medical purposes, at half an ounce of gold, or eight dollars. He immediately insisted on our drinking with him; but on our refusing several times, he dashed it violently against a tree, thus throwing away his half ounce and his brandy both. In paying for something, he dropped a small lump of gold, worth two or three dollars, which we picked up and offered him. Without taking it, he looked at us with a comical mixture of amazement and ill-humor, and at length broke out with, "Well, stranger, you are *a curiosity!* I guess you haint been in the *diggings* long, and better keep that for *a sample.*" They finally purchased a barrel of ale, at three dollars per bottle, and sardines at half an ounce per box; and with a bottle under each arm, and a glass in hand, went about forcing everybody to drink.

The quicksilver mines of California are numerous, extensive and very valuable. The cinnabar ore, which produces the quicksilver, lies near the surface, and is easily procured. Quicksilver is very useful for gold washing. By means of a rocker of a peculiar construction, with three or four lateral gutters filled with quicksilver,

the gold is taken up almost perfectly. The quicksilver, while it rejects the sand, collects and absorbs the particles of gold and forms an amalgam with it. The quicksilver is afterward evaporated in a retort by means of heat, leaving the pure gold. In gathering the minute gold dust in the quartz rock, pulverized by machinery, quicksilver is indispensable.

In 1850, the population of California was estimated at 200,000; and the three largest towns, San Francisco, Sacramento City and Stockton, respectively at thirty, ten and five thousand each. Val-lejo, the seat of government, is a new city, laid out on the bay of San Francisco, twenty-five miles from San Francisco. San Francisco is on the same latitude with Richmond, Virginia, and distant, in an air line from it, two thousand five hundred miles. Previous to the discovery of gold, it was an insignificant village, with about a dozen houses only. It was then called Yerba Buena, *i. e.* Good Herb, from the wild mint growing on the hills.

TERRIBLE SUFFERINGS OF A PARTY OF CALIFORNIA EMIGRANTS.

NOTWITHSTANDING the great sufferings of various parties of over-land emigrants to California since the era of the gold discovery, they will bear no comparison with those about to be related.

In the latter part of the year 1846, a party of eighty emigrants, men, women, and children, known as Reed and Donner's Company, by exploring a new route through the deserts of Utah, and from other causes, lost so much time that they did not reach the Pass of the Sierra Nevada until the 31st of October, when they should have been there a month earlier. The snow, unfortunately, had commenced falling two or three weeks earlier than usual, and when they arrived at the foot of the pass in the mountains, it had become so deep that they found it impossible to proceed. They erected cabins on the banks of Truckee Lake, near the eastern base of the Sierra Nevada, about one hundred miles northeast of the site of Sacramento City, and ere relief reached them, thirty-six of their number perished from cold and starvation, while the unfortunate survivors were obliged to subsist on the corpses of their companions, in order to escape a like fate.

From the 1st of November, until the 16th of December, several attempts were made by some of the emigrants to cross the mountains from their cabins into the settlements, to bring relief to the company; but owing to the softness and the depth of the snow, they were obliged to turn back. On that day, expecting that they would be enabled to reach the settlements in ten days, seven men, five women, a boy, and two Indians, having prepared themselves with snow-shoes, again started on the perilous undertaking, determined to succeed or perish.

On first starting, the snow was so light and loose that even with

snow-shoes, they sunk in twelve inches at every step. On the 17th, they crossed the dividing ridge, and by the 20th, owing to the extreme difficulty of walking in snow-shoes, and the softness of the snow, had succeeded in reaching only twenty miles in advance of their cabins. On that day, the sun rose clear and beautiful, and cheered by its sparkling rays, they pursued their weary way. On this day they traveled eight miles, but one of their number, Mr. Stanton, being unable to keep up with them, remained behind and perished in the snow. A severe storm having come on, they remained in camp until the 23d, when, although the storm continued, they traveled eight miles and encamped in a deep valley. Here the appearance of the country was so different from what they had anticipated, that they concluded that they were lost, but determined to go on rather than return to their miserable cabins. They were also at this time out of provisions, and partly agreed that, in case of necessity, they would cast lots who should die to preserve the remainder. By morning, the snow had so increased that they could not travel; while, to add to their sufferings, their fire had been put out by the rain, and all their endeavors to light another, proved abortive. Already death was in the midst of them, Antonio and Mr. Graves dying at that time.

In this critical moment, the presence of mind of Mr. William Eddy suggested the plan for keeping themselves warm, practiced among the trappers of the Rocky Mountains when caught in the snow without fire. It is simply to spread a blanket on the snow, when the party—if small—with the exception of one, sit down upon it in a circle, closely as possible, their feet piled over one another in the center, room being left for the person who has to complete the arrangement. As many blankets as are necessary are then spread over the heads of the party, the ends being kept down by billets of wood or snow. After everything is completed, the person outside takes his place in the circle. As the snow falls, it closes up the pores of the blankets, while the breath of the party underneath soon causes a comfortable warmth. In this situation, they remained a day and a half; one of the men, Patrick Doolan, and Murphy, a boy, having in the meanwhile become delirious, died.

On the afternoon of the 26th, they succeeded in getting fire into a dry pine tree. Having been four days without food, and since October on short allowance, they had now no alternative but starvation or of preserving life by eating the corpses of the dead. This horrible expedient was resorted to with great reluctance. They cut the flesh from the arms and legs of Doolan, and roasted and ate it, averting their faces from each other and weeping.

Having stripped and dried the flesh from the bodies, they left the camp on the 30th, and with heavy hearts pressed on, wading through the snow and climbing the mountains with almost incredible fatigue; the blood from their frozen feet staining the snow over which they passed. Thus they continued on until the 5th of

January, when Mr. Fosdick gave out, and his flesh was preserved to sustain life in the remainder. Soon after, Lewis laid down and died.

On the 17th, Mr. Eddy, who stood the fatigues better than any of the others, and had gone in advance of the rest, reached the settlement on Bear Creek, from whence relief was dispatched to the remains of his party. Of these, the females had borne up wonderfully. Not one had perished, while men of strong frames and nerves had gone down in the death-struggle. Never was the fortitude, the passive, enduring courage of woman more signally displayed, than in this dreadful march; they encouraged the men by words and example, to bear up under their sufferings and persevere unto the end.

As soon as the people of San Francisco received from the settlement on Bear River intelligence of the dangerous situation of the emigrants encamped on Truckee Lake, they sent out several parties to their relief. Captain Sutter also displayed his characteristic benevolence on the occasion, furnishing in advance of the others, men and mules laden with provisions for the relief of the perishing sufferers. But such were the difficulties of reaching them, that it was not until the 29th of April that the last of the party was brought into Sutter's Fort.

A more shocking scene cannot be imagined than that witnessed by the parties who went to the relief of the unfortunate emigrants. Large numbers had perished from cold and starvation. The bones of those who had died and been devoured by the miserable survivors, were lying around their tents and cabins. Bodies of men, women, and children, with half the flesh torn from them, lay on every side. A woman sat by the side of the body of her husband, who had just died, and was in the act of cutting out his tongue; the heart she had already taken out, broiled, and eaten. The daughter was seen eating the flesh of the father—the mother, that of the children—children, that of parents. The emaciated, wild, and ghastly appearance of the survivors added to the horror of the scene. The awful change cannot be described, which a few weeks of dire suffering had wrought in the minds of these wretched beings. Those who but one month before would have shuddered and sickened at the thought of eating human flesh, or of killing their companions and relatives, to preserve their own lives, now looked upon the opportunity these acts afforded them of escaping death as a providential interference. Calculations were coldly made as they sat around their gloomy camp-fires, for the next and succeeding meals. Various expedients were devised to prevent the dreadful crime of murder, but they finally resolved to kill those who had the least claims to longer existence, when just at that moment some of them died, which afforded temporary relief.

After the first few deaths, but the one all-absorbing thought of individual self-preservation prevailed. The feelings of natural affection were dried up. The cords that once vibrated with conu-

bial, parental, and filial affection, were rent asunder, and each one seemed resolved, without regard to the fate of others, to escape from the impending calamity.

So changed had they become, that on the arrival of the first party with food, some of them cast it aside, preferring the putrid human flesh that remained. The day previous, one of the emigrants took a small child in bed with him and devoured the whole before morning.

With but few exceptions, all the sufferers, both those who perished and those who survived, manifested a species of insanity. Objects delightful to the senses, often flitted across the imagination, and a thousand fantasies filled and disturbed the disordered brain.

Although in the midst of winter, their deluded fancies often represented to them during the day beautiful farm-houses, and extensive fields and gardens in the distance, toward which they would press forward with all the energy with which alternate hope and despair would inspire them. During the night, they often heard men talking, dogs barking, cocks crowing, and bells tinkling. Many believed that they were surrounded by familiar faces and old friends, and that they saw objects associated with scenes of other years and places. Some saw persons coming to their relief, and called to them to hasten. There were instances of persons suspecting, at times, that the terrible circumstances by which they were in reality surrounded, were but the illusions of most horrible dreams, and they would rub their eyes and put their hands upon their heads to assure themselves, if it were possible, that all was not the result of a dreadful vision or nightmare.

Some of the party, though sometimes during brief intervals perfectly sane when awake, suffered from most painful and terrifying dreams—in which they saw combats and cries of despair and anguish, together with visions of famine and death, while floundering in fathomless snows.

Some of these unhappy emigrants felt a general sinking of all their mental and bodily energies, without, however, experiencing the gnawings of hunger. This absence of the sensation of hunger was followed by an irresistible desire to sleep. In the course of half an hour after falling into this torpor, they breathed unnaturally and with difficulty, speedily followed by a rattling in the throat. This continued from one to four hours, when death closed the scene; the individual, in the meantime, appearing to be in a profound slumber. A few became furious, and died without sinking into this slumber. Others died calm and peaceful, taking affectionate leave of friends, and expressing a confident hope in the mercy of the blessed Redeemer.

The last relief party was conducted by Mr. Fallen, by which time all of the living sufferers had been taken into the settlements, excepting Mr. and Mrs. Donner, and a vile wretch named Keyburg. When the others left, Mrs. Donner remained with her

husband, who was unable to travel. Why Keysburg remained, can only be guessed. Donner was a highly respectable and wealthy farmer of Illinois, and his lady a woman of great activity and energy, and of a polished education. They had with them abundant means in money and merchandise.

Fallen and his party reached the cabins sometime in April, in one of which they found Keysburg reclining upon the floor smoking a pipe. Near his head a fire was blazing, upon which was a camp-kettle filled with human flesh. His feet were resting upon skulls and dislocated limbs stripped of their flesh. A bucket, partly filled with blood, was standing near, and pieces of human flesh fresh and bloody, strewed around. His appearance was haggard and revolting. His beard was of great length; his finger nails had grown out until they resembled the claws of a wild beast. He was ragged and filthy, and the expression of his countenance ferocious. He stated that the Donners were both dead; that Mrs. Donner was the last to die, and had expired two days previously; that she had left her husband's camp eight miles distant, and came to his cabin. She attempted to return in the evening to the camp, but becoming bewildered, she came back to the cabin and died in the course of the night.

He was accused of having murdered her for her flesh, and the money the Donners were known to possess, but denied it, and also all knowledge of their money; but Fallen placed a rope around his neck and commenced hanging him to the limb of a tree, when to save his life, he confessed that he knew all about the money. They released him, and he produced \$517 in gold, which he had secreted. Against his will, they then compelled him to accompany them to the nearest settlements. The body of Donner was found in his cabin, where he had been carefully laid out by his wife, and a sheet wrapt around the corpse. This was the last act probably that she performed ere visiting the cabin of Keysburg.

On the 22d of June, 1847, the return party of General Kearney halted at the scene of these horrible occurrences to collect and bury the remains. Near the principal cabins were two bodies entire, with the exception that their abdomens had been cut open and their entrails extracted. Their flesh had been either wasted by famine or evaporated by exposure to a dry atmosphere, and they presented the appearance of mummies. Strewn about the cabins, were dislocated and broken bones, skulls—some of which had been sawed apart carefully to extract their brains—human skeletons, in short, in every variety of mutilation, all presenting a most appalling and revolting spectacle.

UTAH.

THE name *Utah* is derived from that of a native tribe, and is given to it in the Act of Congress of 1850, which formed it into a Territory of the United States. The name *Deseret* was applied to it by the Mormons, and is said to signify *virtue and industry*.

A large part of Utah is of volcanic origin. It is supposed, from certain traditions and remains, to have been, many hundred years ago, the residence of the Aztec nation—that they were driven south by the volcanic eruptions which changed the face of the whole country. Eventually, they became the possessor of Mexico, where, after attaining great proficiency in the arts of life, they were finally overthrown by the Spaniards at the time of the conquest.

Utah was not probably visited by civilized man until within the present century. These were Catholic missionaries who may have just touched its California border, and the trappers and hunters employed by the fur companies. The first establishment in Utah was made by William H. Ashley, a Missouri fur-trader. In 1824, he organized an expedition which passed up the Valley of the Platte River, and through the cleft of the Rocky Mountains, since called "*The South Pass*;" and then advancing further west, he reached the Great Salt Lake, which lies embosomed among lofty mountains. About a hundred miles southeast of this, he discovered a smaller one, since known as "Ashley's Lake." He there built a fort or trading-post, in which he left about a hundred men. Two years afterward, a six-pound piece of artillery was drawn from Missouri to this fort, a distance of more than twelve hundred miles, and in 1828, many wagons, heavily laden, performed the same journey.

During the three years between 1824 and 1827, Ashley's men collected and sent to St. Louis, furs from that region of country to an amount, in value of over \$180,000. This enterprising man then sold out all his interests to Messrs. Smith, Jackson, and Sublette. These energetic and determined men carried on for many years an extensive and profitable business, in the course of which they traversed a large part of Southern Oregon, Utah, California, and New Mexico west of the mountains. Smith was murdered in the summer of 1829, by the Indians northwest of Utah Lake. Ashley's Fort was long since abandoned.

Unfortunately, these adventurous men knew nothing of science, and but little information was derived from them save vague reports which greatly excited curiosity; this was only increased by the partial explorations of Fremont.

In his second expedition, made in 1843, he visited *The Great Salt Lake*, which appears upon old Spanish maps as Lake Timpanogos and Lake Tegaya.

It was on the 21st of August, that the party first came into the fertile and picturesque Valley of the Great Bear River, its tributary.

They were entering into what was to them a region of strange and extraordinary interest. They were upon the waters of the famous and unknown lake, around which the vague and superstitious accounts of the trappers had thrown a delightful obscurity. It was generally supposed that it had no visible outlet; but that somewhere upon its surface was a horrible whirlpool, through which the waters found their way to the ocean by some subterranean communication.

On the 6th of September, they ascended an eminence, and, immediately at their feet, "beheld," says Fremont, "the object of our anxious search—the waters of the *Inland Sea*, stretching in still and solitary grandeur far beyond the limit of our vision. It was one of the great points of the exploration, and as we looked eagerly over the lake in the first emotions of excited pleasure, I am doubtful if the followers of Balboa felt more enthusiasm when, from the heights of the Andes, they for the first time saw the great western ocean. It was certainly a magnificent object and a noble *terminus* to this part of our expedition; and to travelers so long shut up among mountain ranges, a sudden view over the expanse of silent waters had in it something sublime."

They had brought with them an India-rubber boat, which Fremont determined to use in explorations upon the lake. They launched it in a small stream emptying into it. "When near its mouth, we came," says Fremont, "to a small black ridge on the bottom, beyond which the water suddenly became salt, beginning gradually to deepen. It was a remarkable division, separating the fresh waters of the rivers from the briny water of the lake, which was entirely saturated with salt. Pushing our little vessel across the narrow boundary, we sprang on board, and at length were afloat upon the waters of the unknown sea. Although the day was very calm, there was a considerable swell on the lake; and there were white patches of foam on the surface, which were slowly moving to the southward, indicating the set of a current in that direction, and recalling the recollection of the whirlpool stories. The water continued to deepen as we advanced; the lake becoming almost transparently clear, of an extremely beautiful bright green color; and the spray which was thrown into the boat and over our clothes was directly converted into a crust of common salt, which covered also our hands and arms. 'Captain,' said Carson, who for some time had been looking suspiciously at some whitening appearances outside the nearest islands, 'what are those yonder? Won't you just take a look with the glass?' We ceased paddling for a moment, and found them the caps of the waves that were beginning to break under the force of a strong breeze that was coming up the lake. Gradually we worked across the rougher sea of the open channel into the smoother water under the lea of the island for which we were steering; and began to discover that what we took for a long row of pelicans ranged on the beach, were only low cliffs whitened with salt by the spray of the waves."

About noon they reached the island, and landed on a broad,

handsome beach, behind which the hill into which the island gathered rose somewhat abruptly. The cliffs and masses of rock along the shore were whitened by an incrustation of salt, where the waves dashed up against them; and the evaporating water, which had been left in holes and hollows on the surface of the rocks, was incrustated with salt for about one-eighth of an inch. This salt was very white and fine, having the usual flavor of the best common salt. In the afternoon they ascended the highest point of the island—a bare, rocky peak, eight hundred feet above the lake. “Standing on the summit,” says Fremont, “we enjoyed an extended view of the lake, inclosed in a basin of rugged mountains, which sometimes left marshy flats and extensive bottoms between them and the shore, and, in other places, came down directly into the water with bold and precipitous bluffs. Following with our glasses the irregular shores, we searched for some indications of a communication with other bodies of water, or the entrance of other rivers, but the distance was so great that we could make out nothing with certainty. As we looked over the vast expanse of waters spread out beneath us, and strained our eyes along the silent shores, over which hung so much doubt and uncertainty, and which were so full of interest to us, I could hardly repress the almost irresistible desire to continue our explorations; but the lengthening snow on the mountains was a plain indication of the advancing season, and our frail linen boat appeared so insecure, that I was unwilling to trust our lives to the uncertainties of the lake. We, however, felt pleasure in remembering that we were the first who, in the traditionary annals of the country, had visited the islands, and broken, with the cheerful sounds of human voices, the long solitude of the place.”

They passed the night on the island, kindling bright fires out of drift-wood, their slumbers being lulled by the roar of the surf that dashed heavily, like ocean waves, upon the shores of this inland sea.

In the morning, when they embarked for the main land, the surf was dashing heavily; the lake was dark and agitated; and the wind blowing a strong gale ahead, rendered their return, in their frail boat, one of imminent peril and difficulty.

In the region of the Utah Lake, Fremont encountered a poor, miserable race of Indians, known under the name of Diggers, who, among human beings, may be considered the nearest approach to the animal creation. Their sole occupation was to procure food sufficient to support mere animal existence. They lived principally upon roots, which they *dug* from the ground; hence their name. They carried long forked sticks, to haul out lizards and other small animals from their holes for food. Their heads were large; hair matted and coarse; and their bodies almost entirely naked. The expression of their countenances strongly resembled those of beasts of prey, and all their actions were those of wild animals. Joined to the restless motion of the eye, there was a want of mind, an

absence of thought, and an action wholly by impulse, strongly expressed, and which strikingly recalled the similarity. These people inhabit the Great Basin, where they thus eke out a scanty subsistence from seeds, roots, and lizards.

Four years after this visit of Fremont, the Mormons, driven from their first settlement in Missouri, and afterward from the City of Nauvoo, sought in this then isolated region a haven of rest.

It will not be inappropriate to give here a brief history of this peculiar people; their origin and progress; their creed; their prophet, and some account of the great City of Nauvoo, in which they dwelt after having been ignominiously driven from Missouri, until expelled by the people of Illinois, they again started forth, diminished in numbers, broken by persecution, to seek a new home afar from their enemies; their wanderings in the wilderness; their settlement in Utah; their present condition, and the probability of their eventual suppression.

JOSEPH SMITH, the founder of Mormonism, was born of humble parentage, in Sharon, Vermont, in 1805. Some ten years after, his family removed to Western New York. Joseph, when a young man, was occasionally employed in Palmyra as a laborer, and was reputed to be lazy and ignorant. According to the testimony of respectable individuals in that place, Smith and his father were addicted to disreputable habits, and moreover, extremely superstitious and believers in witchcraft.

They, at one time, procured a mineral rod, and dug in various places for certain treasure, the existence of which they claimed had been supernaturally revealed to them. Young Smith stated that when digging, he had seen the chest in which it was contained, but never could get it into his hands, as when he approached it, it would sink deeper into the earth. He also placed a singular looking stone in his hat, which he pretended afforded him light by which he made many wonderful discoveries of buried gold and silver.

About this period, by some means unknown, Joseph got possession of the manuscript of the book of Mormons. This work was based upon one written by Solomon Spalding, who was born in Connecticut, in 1761, graduated at Dartmouth, and having failed in mercantile business, in 1809, removed to Conneaut, the northeastern corner town of Ohio, where he engaged in the iron business. While there, he wrote a book, which he called the "Manuscript Found," purporting to be a history of the first settlers of America, endeavoring to show that the Indians were the descendants of the lost tribes of Israel. Mr. Spalding, like most novices in the art of authorship, had an idea that the book would make his fortune and enable him to pay his debts; and was very fond of reading it to his friends. Having again failed in business, he removed to Pittsburgh in 1812, and died in that region four years after. While in Pittsburgh, he placed his manuscript in the hands

of some printers for examination, and there all traces of it were lost to his friends, until the publication of the Mormon Bible, when his old Conneat partner, Mr. Henry Lake, his brother, John Spalding, and several other persons, recognized it as being essentially the same as the "Manuscript Found."

The original author of the Mormon conspiracy is supposed to have been Sidney Rigdon, a clergyman of the "Disciples'" order of Baptists. He took up his residence at Pittsburgh about the year 1824, and there became intimate with the printer, Mr. Lambdin, with whom the manuscript of Spalding had been left. He remained there about three years, during which time, he abandoned preaching, as he said, to devote his time to studying the Bible; but, as it is supposed, to re-write Spalding's manuscript. He then left, and took up his residence in Mentor, in northeastern Ohio, and commenced preaching some new points of doctrine, which were afterward found inculcated in the Mormon Bible. About the time he left Pittsburgh, Lambdin, the printer, died. During the earlier part of his residence in Lake County, Rigdon was frequently absent.

About this period, Joseph Smith claimed to have knowledge of a book that unfolded the history of the first inhabitants of America. The necromantic fame of Smith had, ere this, extended a considerable distance, and it is inferred that Rigdon hearing of it, had a communication with him for the purpose of making him the medium through which to bring his work before the world.

It was in the autumn of 1827, that Smith first pretended that he had found golden plates containing the Mormon Bible, which were engraved in hieroglyphic characters, inclosed in a stone box, and buried in a hill in the vicinity of Palmyra. The existence of these plates he claimed, and their place of concealment, were made known to him by an angel sent from God.

Smith now commenced his career as the founder of the new sect, appointing a number of meetings at Palmyra, for the purpose of declaring the Divine revelations, which he stated were made to him. He was, however, unable to produce any excitement in the village, as but few had sufficient curiosity to listen to him. Not having the means to print his revelations, he applied to Mr. Crane, of the Society of Friends, stating that he was moved by the Spirit to call upon him for assistance. To this request Mr. Crane answered, that he had better go to work or he would end his career in the State Penitentiary. He had better success with Martin Harris, who owned a fine farm in Palmyra. This Harris was one of those unstable, weak minded characters who are ever ready to adopt every novelty in religion that arises, he having been by turns, a Quaker, a Universalist, a Restrictionist, a Baptist, a Presbyterian, and finally a Mormon. By his assistance, about five thousand copies of the Mormon Bible were printed in 1830, at an expense of three thousand dollars. Harris after this, was, in accordance to the testimony of his wife in her last illness, guilty

OKONOGAN, OREGON.

"Okonogan (now in Washington Territory) and Spokane, on Spokane River, were the first fur-trading establishments of the Company of John Jacob Astor in Oregon."

of immoral practices; and in the publication of this work, was influenced only by sordid motives.

Soon after its publication, Parley B. Pratt, an associate of Rigdon was at Palmyra, and became a pretended convert to the new doctrine. In October of the same year, he, with Cowdery, Peterson, and Whitmer, arrived at Mentor with a supply of the new bibles. In the vicinity at Kirtland, were a few families of Rigdon's congregation, who having become extremely fanatical, were looking for some wonderful event to take place in the world. Seventeen of those persons at once became converts, and were all re-immersed in one night by Cowdery. Rigdon soon joined them, and by his means, Mormonism received a powerful impetus, and more than one hundred converts were speedily added. Rigdon visited Palmyra, where he remained about two months, receiving revelations and preaching. Upon his return to Kirtland, he was followed by the Prophet Smith and his connections, who, from a state of almost beggary, were furnished with "the fat of the land" by their disciples, some of whom were wealthy.

From this time the delusion spread rapidly. Nearly all their male converts were made "Elders" and sent forth to proclaim, with all their wild enthusiasm, the wonders and mysteries of Mormonism. All those having a taste for the marvelous, within the range of a hundred miles, traveled to hear the strange revelations from the throne of the prophet at Kirtland. Their "elders" made many converts in different parts of the North, who, placing their all in wagons, wended their way to the "promised land," in order, as they had been told, to escape the judgments of heaven, which were soon to be denounced upon the nation. At Kirtland, the Mormons erected a splendid temple at an expense of about forty thousand dollars, within which was a sacred apartment, a "holy of holies," where none but the priests were allowed to enter. While in the height of their prosperity there, they numbered nearly three thousand souls.

Before the arrival of the Prophet Smith at Kirtland, Cowdery and some of his companions proceeded to the West with the avowed intention, under the command of the Lord, of converting the "Lamanites," as they termed the Indians. They remained at Independence, Jackson county, on the frontiers of Missouri, until spring when, being joined by others from Kirtland, they laid the corner-stone of a city, which they called Zion, of whose future prosperity and magnificence many marvelous revelations were made by the prophet. Its streets were to be paved with gold; all that escaped the general destruction, which was soon to take place, would there assemble with all their wealth, and they were to be joined by the ten lost tribes of Israel.

Both this establishment and that at Kirtland, continued to flourish. On the opening of the year 1833, "the gift of tongues" made its appearance among the Mormons. They had long before professed to be fully endowed with the power of healing all man-

ner of diseases, discovering spirits and casting out devils, to have revelations from heaven, and personal intercourse with God and his angels. This gift was not confined to the elders and high priests, but nearly all the proselytes, both old and young, could show their faith by speaking with "tongues." A specimen of this language, as it fell from the lips of the prophet himself upon a sacramental occasion, is subjoined from the narrative of a seceding Mormon.

"Ak man, oh son, oh man, ah ne commene en holle goste, en esac milkea, Jeremiah, Ezekiel, Nephi, Lehi, St. John."

This language was, for several months, spoken almost daily, while they were about their common avocations, as well as when they were assembled for worship. It was claimed that it could never be understood except a supernatural power was given at the instant to some one present to interpret it.

By the year 1833, the Mormons numbered, in Jackson county, Missouri, about twelve hundred souls. They had a newspaper at Independence, a mercantile house, which they called the "Lord's store," and several mechanic shops. The people of the county became alarmed lest the Mormons should deprive them of their civil rites, and the enmity which had arisen, ensued in an open rupture. On the 23d of July, a meeting of about three hundred persons was held at Independence with the avowed object of driving the Mormons from the county. They issued an address, in which they stated that the Mormons were fast increasing, "with a gradual falling off of their characters, until they had nearly reached the low condition of the black population; that the citizens were daily told that they were to be cut off and their lands appropriated to the Mormons for inheritances; that they sometimes said this was to be accomplished either by the destroying angel or by their own power, under the direction of God." They feared, "that should this population continue to increase, they would soon have all the offices in the county in their hands, and that the lives and property of the other citizens would be insecure under the administration of men who are so ignorant and superstitious as to believe that they have been the subjects of supernatural and miraculous cures," etc. They further stated that one of the means resorted to by the Mormons to drive them to emigrate, was an indirect invitation to the free brethren of color in Illinois to come, like the rest, to the land of Zion. They resolved that no Mormon should, in future, settle in the county—that those there should give a pledge to remove within a reasonable time. That the Mormon press should be discontinued and their store and shops closed. They finished by appointing a committee to wait upon the Mormon leaders and inform them of their intentions. Obtaining no satisfaction, they secured the type and press of the newspaper, and destroyed the building.

After this, the Mormons agreed to leave the county, one half by

the 1st of January, and the remainder by the 1st of April. In the latter part of October, the citizens concluding that the Mormons did not intend to fulfill their stipulation, attacked one of their settlements in the county, unroofed several houses, and beat some of the men. At night they attacked the "Lord's store" and the dwelling of its keeper in Independence. Within a day or two after, the several parties resorted to fire-arms, and one Mormon and two citizens were killed. A majority of the Mormons were finally compelled to cross the Missouri River into Clay county, where they made the town of Liberty their headquarters. They were here joined by their prophet, Smith, and a larger part of the Mormons from Kirtland. That settlement had received a fatal blow from the failure of their bank, an unchartered and illegal institution, which had issued heavy loans and was ruined for want of legal power to collect its debts.

Difficulties arising with the people of Clay county, the Mormons removed their headquarters to what is now Caldwell, then part of Ray county, and founded the town of Farwest. Settlements were also made by them at Diahmond, in Daviess county, at Dewitt, in Carrol county, and at other points. At these places, large numbers of them soon gathered, rapidly improving town and county.

Things went on well for awhile, until at last dissensions broke out among them; part of them made and circulated counterfeit coin, to which others objected. At length, some of the members deserted and were driven from the county with threats of death if they should return. Some of them, it is said, stole from the Missourians, while the latter, it is stated, could obtain no redress, having to go before a Mormon justice or jury, where the injured party always had to pay the costs, with the Mormons abusing them for bringing "vexatious lawsuits."

Supposing the mainbody of the Mormons to have been upright, there can be no question, but that they had among them a large number of worthless characters, who joined them for the better effecting iniquitous projects. The Mormons also held two views which alarmed and excited the frontier population. One was, that the West was given them by the Lord as their sole inheritance, and that, through his aid, they should eventually drive out and utterly destroy all the unconverted dwellers, "the Gentiles," of the land. The other was, that the Mormon Bible taught that the Indians descended from the Hebrews, and their ultimate restoration to their share in the inheritance of the faithful; from this, the frontiersmen, many of whom had bravely fought against the Indians in settling the country, anticipated a union of the Mormons and the savages in a war of extermination against them. Looking with suspicion upon the new sect, and believing them all to be arrant rogues and thieves, they became opposed to their possession of the chief political influence.

At an election in the ensuing August, in Daviess county, where

their right of suffrage was disputed, a general quarrel and fight took place among the Mormons and the citizens, in which a Mormon was stabbed and several of each party wounded. This precipitated matters, and both parties, in the ensuing fall, commenced hostilities. The Mormons arming to the number of several hundred, burnt the towns of Gallatin and Millport, and dividing into small parties, ravaged the country, and commenced, it is said, burning farm-houses and driving out the women and children, during a severe snow-storm; destroyed their property or took it to the "Lord's store." Skirmishes ensued between them and the Missourians, in which many of both parties were killed. In action at Horn's Mill, eight Missourians were wounded, and about twenty-five Mormons killed, and thirty wounded.

Governor Boggs ordered out four thousand five hundred militia to quell these disturbances, thirty-five hundred of whom, under General Lucas, arrived at Farwest. On the approach of this formidable body, the Mormons, to the number of eleven hundred, surrendered and laid down their arms, and six of their leaders, their prophet included, delivered themselves up as hostages. The leaders were imprisoned and tried on the various charges of treason, murder, burglary, larceny, arson, etc. The mass of the unhappy people were stripped of their property to pay the expense of the war, and driven, men, women, and children, naked and starving, in mid winter, from the State. Multitudes of them were forced to encamp without tents and with scarce any clothes or food, on the banks of the Mississippi, which was too full of ice for them to cross. Several women and children, too feeble to sustain such intense sufferings, perished.

The saints who had been thus ignominiously driven from Missouri, were received with great favor by the people of Illinois. Converts from every quarter of the world rapidly flocked into the new settlement at Nauvoo, and in a year after their arrival there, it was supposed that Nauvoo contained about 15,000 inhabitants. Smith had a new revelation, and commanded the faithful, far and near, to "bring gold and precious materials for the building of a Temple for the worship of God, and a house for the dwelling-place of his prophet," Joe Smith. The ready and liberal response of the saints to this requisition, and the style of the new residence of Smith, are an indication of the growing influence and increasing licentiousness of the prophet. A special charter was obtained from the legislature of Illinois; among the privileges granted by this charter, was the power to organize a military force, armed and equipped by the State, but commanded by the prophet. At this time the Mormons numbered, in the United States and Great Britain, 150,000, and under the preaching of the missionaries which the prophet continued to send off in every direction, the number was rapidly increasing. From the time they were driven forth from Missouri, Smith had entertained the idea of placing himself at the head of his followers, and, like Mohammed, march-

ing back in triumph to the Mecca of the saints in Jackson county. This military organization, already numbering four thousand able-bodied men, well armed and equipped, and entirely devoted to him, was the first step toward the accomplishment of his object. But although a skillful tactician and possessed of many of the requisites of a leader, Joseph lacked the intellect, the determined energy, and above all, the self-command and the self-denial requisite to organize and conduct to a successful issue an enterprise of such magnitude and difficulty.

Large accessions were daily made to the new settlement, and apparently they were increasing in riches, power and prosperity; there was great industry among the masses, an efficient military organization, the protection of a powerful State, and its prophet a prominent candidate for the Presidency. But beneath all this apparent prosperity were concealed the seeds of decay and destruction. The leaders were daily becoming more arrogant, corrupt, and licentious; paying little or no regard to the rights of their neighbors or to public decency and morality.

The prophet had never been remarkable for virtue or even a semblance of morality and decency, and as riches flowed in upon him and his power increased to almost unlimited extent, his lust and licentiousness kept pace with it, and in order the more readily to gratify his passions and to make his very lusts minister to the advancement of his power, he proclaimed that he had received a revelation from heaven not only justifying a plurality of wives, but even making it the duty of the saints to take a number of virgins to wife, and lead them on to heaven; at the same time, as an inducement to the young, the handsome, and innocent to unite themselves to the old saints, his revelation announced that the surest way for them to gain happiness here and eternal pleasure and bliss in the future world, was to *seal* themselves to one of the leaders in Zion—the older and higher in the church, the more sure their election, and the ecstatic their happiness. The latter part of this revelation is as follows:

“If any man espouse a virgin and desire to espouse another, and the first give her consent, and if he espouse the second, and they are virgins and have been espoused to no other man, then he is justified; he cannot commit adultery, for they are given unto him. But if either of the virgins be with another man, she has committed adultery and shall be destroyed,” etc.

This is the origin of the spiritual wife doctrine by which a saint might dictate that a certain woman (not his wife) should be his spiritual wife, and if assented to, the relationship brought with it all the rights of matrimony.

It was not without considerable hesitation and after many hints and soundings, that the prophet announced this new revelation, and although he had secured the co-operation of the leaders, and a large part of the lay-members were ready for any increase of their license and immorality, yet there were many who were shocked

citations of the prominent men among them, they were restrained, and no further disturbances, connected with the arrest and murder of the Smiths, occurred. Their bodies were removed to Nauvoo, and interred amid the most solemn and imposing ceremonies.

The excitement, produced by the death of the prophet, having in a measure subsided, Brigham Young was chosen his successor, and under his management the Mormons settled down into comparative quiet, and everything appeared properous, and the workmen progressed rapidly with the Temple. The Temple was of white limestone, one hundred and twenty-eight by eighty-eight feet square, and sixty feet high, surmounted by a steeple over one hundred feet high. But, although the death of Smith had produced a suspension of hostilities, the popular feeling in Illinois was strong against the Mormons. They were accused of having resisted the laws, of having made their capital a depository of stolen goods, and of violating all the decencies of civilized life. Brigham Young, perceiving that it was impossible to oppose the popular fury, began to prepare the minds of the saints for removal beyond the bounds of the United States.

The first band crossed the Mississippi in February, 1846. Thomas L. Kane, Esq., brother of the late Dr. Elisha K. Kane, in a discourse delivered before the Historical Society of Pennsylvania, March 26, 1850, gives a very interesting account of this journey of the Mormons.

In the second edition of this discourse, Colonel Kane says, "that he saw the Mormons under the most favorable circumstances, and that their morality was probably attributable to their forced abstemiousness during the journey through the wilderness, and to the fact that the Mormons he saw were but a portion of the church, as it flourished at Nauvoo; and this the better part, which had been *broken* and *screened* by calamity. When their enemies triumphed at Nauvoo, the designing leaders forsook them. Priests, elders, and scribes deserted *en masse*, carrying with them all the property their shrewdness and knavery had enabled them to accumulate. Those that remained were the *masses*, always honest in the main, and sincere even in their delusions." These were the men Colonel Kane saw on the Prairie Trail, sharing sorrow with the sorrowful, and poverty with the poor, and therefore the very favorable account he gives of these few who had been tried by adversity, purified by privation, and broken by persecution, can, in no degree, discredit the authentic account of the vice and crime prevalent among the Mormons.

"There was no sentimental affection at their leave-taking. The afternoon before was appropriated to a farewell ball; and a more merry dancing rout I have never seen, though the company went without refreshments, and their ball-room was of the most primitive order. It was the custom, when the larger camps rested for a few days together, to make great arbors, or bowers, as they called them, of poles and brush and wattling, as places of shelter for their

meetings of devotion or conference. In one of these, where the ground had been trodden firm and hard by the worshipers of the popular Father Taylor's precinct, were gathered now the youth and beauty of the Mormon Israel.

"If anything told the Mormons had been bred to other lives, it was the appearance of the women, as they assembled here. Before their flight, they had sold their watches and trinkets as the most available resource for raising ready money; and hence, like their partners, who wore waistcoats cut with useless watch-pockets, they, although their ears were pierced and bore the loop-marks of rejected pendants, appeared without ear-rings, chains, or brooches. Except such ornaments, however, they lacked nothing most becoming the attire of decorous maidens. The neatly darned white stocking, and clean, bright petticoat, the artistically clear-starched collar and chemisette, the something faded, only because too well washed, lawn or gingham gown, that fitted modishly to the waist of its pretty wearer—these, if any of them spoke of poverty, spoke of a poverty that had known its better days.

"With the rest attended the elders of the church within call, including nearly all the chiefs of the High Council, with their wives and children. They, the gravest and most trouble-worn, seemed the most anxious of any to be first to throw off the burden of heavy thoughts. Their leading off the dancing in a great double cotillion was the signal for the festivity to commence. Light hearts, lithe figures, and light feet had it their own way from an early hour until after the sun had dipped behind the sharp sky-line of the Omaha hills. Silence was then called, and a well-cultivated mezzosoprano voice, belonging to a young lady with fair face and dark eyes, gave, with quartette accompaniment, a little song—a version of the text, touching to all earthly wanderers:

'By the rivers of Babylon we sat down and wept.'
'We wept when we remembered Zion.'

"There was danger of some expression of feeling when the song was over, for it had begun to draw tears; but breaking the quiet with his hard voice, an elder asked the blessing of heaven on all who, with purity of heart and brotherhood of spirit, had mingled in that society, and then all dispersed, hastening to cover from the falling dews.

"Well as I knew the peculiar fondness of the Mormons for music, their orchestra in service on this occasion astonished me by its numbers and fine drill. The story was, that an eloquent Mormon missionary had converted its members in a body at an English town, a stronghold of the sect, and that they took up their trumpets, trombones, drums, and hautboys together, and followed him to America.

"When the refugees from Nauvoo were hastening to part with their tableware, jewelry, and almost every other fragment of metal-

wealth they possessed that was not iron, they had never even thought of giving up the instruments of this favorite band; and when the battalion was enlisted, though high inducements were offered some of the performers to accompany it, they all refused. Their fortunes went with the Camp of the Tabernacle. They had led the farewell service in the Nauvoo Temple. Their office now was to guide the monster choruses and Sunday hymns; and like the trumpets of silver, made of a whole piece 'for the calling of the assembly, and for the journeying of the camps,' to knoll the people into church. Some of their wind instruments indeed were uncommonly full and pure toned, and in that clear dry air could be heard to a great distance. It had the strangest effect in the world to listen to their sweet music winding over the uninhabited country; something in the style of a Moravian death-tune blown at daybreak, but altogether unique. It might be when you were hunting a ford over the Great Platte, the dreariest of all wild rivers, perplexed among the far-reaching sandbars and curlew shallows of its shifting bed, the wind rising would bring you the first faint thought of a melody; and, as you listened, borne down upon the gust that swept past you a cloud of the dry sifted sand, you recognized it—perhaps a home-loved theme of Henry Proch or Mendelssohn Bartholdy, away there in the Indian Marches!"

The summer camps of the Mormons formed an interesting spectacle. They were gay with bright white canvas, and alive with the busy stir of swarming occupants. In the clear blue morning air, the smoke streamed up from more than a thousand cooking fires. Countless roads and by-paths checkered all manner of geometric figures on the hill sides. On the slopes, herd-boys were seen lazily watching immense herds of cattle, sheep, horses, cows and oxen. Along the creeks—where they were sometimes pitched—women, in great force, would be washing and rinsing all manner of white muslins, red flannels, and parti-colored calicoes, and covering acres of grass-plot with their variously-hued garments. Groups of merry children were playing among the tents.

"The romantic devotional observance of the Mormons, and their admirable concert of purpose and action, met the eye at once. After these, the stranger was most struck perhaps by the strict order of march, the unconfused closing up to meet attack, the skillful securing of the cattle upon the halt, the system with which the watches were set at night to guard them and the lines of *corral*, with other similar circumstances indicative of the maintenance of a high state of discipline. Every ten of their wagons was under the care of a captain. This captain of ten, as they termed him, obeyed a captain of fifty, who, in turn, obeyed his captain of a hundred, or directly a member of what they call the High Council of the Church. All these were responsible and determined men, approved of by the people for their courage, discretion and experience. So well recognized were the results of this organization, that bands of hostile Indians have passed by

comparatively small parties of Mormons to attack much larger but less compact bodies of other emigrants.

“The most striking feature, however, of the Mormon emigration was undoubtedly their formation of the Tabernacle Camps and temporary stakes or settlements, which renewed in the sleeping solitudes everywhere along their road the cheering signs of intelligent and hopeful life.

“I will make this remark plainer by describing to you one of these camps, with the daily routine of its inhabitants. I select at random for my purpose a large camp upon the delta between the Nebraska and Missouri, in the territory disputed between the Omaha and Otto and Missouri Indians. It remained pitched here for nearly two months, during which period I resided in it. It was situated near the Petit Papillon, or Little Butterfly River, and upon some finely rounded hills that encircle a favorite cool spring. On each of these a square was marked out; and the wagons, as they arrived, took their positions along its four sides in double rows, so as to leave a roomy street or passageway between them. The tents were disposed also in rows, at intervals between the wagons. The cattle were folded in high-fenced yards outside. The quadrangle inside was left vacant for the sake of ventilation, and the streets, covered in with leafy arbor-work, and kept scrupulously clean, formed a shaded cloister walk. This was the place of exercise for slowly recovering invalids, the day-home of the infants, and the evening promenade of all.

“From the first formation of the camp, all its inhabitants were constantly and laboriously occupied. Many of them were highly educated mechanics, and seemed only to need a day's anticipated rest to engage them at the forge, loom, or turning lathe, upon some needed chore of work. A Mormon gunsmith is the inventor of the excellent repeating rifle that loads by slides instead of cylinders; and one of the neatest finished fire-arms I have ever seen was of this kind, wrought from scraps of old iron, and inlaid with the silver of a couple of half dollars, under a hot July sun, in a spot where the average height of the grass was above the workman's shoulders. I have seen a cobbler, after the halt of his party on the march, hunting along the river bank for a lapstone in the twilight, that he might finish a famous boot-sole by the camp-fire; and I have had a piece of cloth, the wool of which was sheared, and dyed, and spun, and woven during a progress of over three hundred miles.

“Their more interesting occupations, however, were those growing out of their peculiar circumstances and position. The chiefs were seldom without some curious affair on hand to settle with the restless Indians; while the immense labor and responsibility of the conduct of their unwieldy moving army, and the commissariat of its hundreds of famishing poor, also devolved upon them. They had good men they called bishops, whose special office it was to

look up the cases of extremest suffering; and their relief parties were out night and day to scour over every trail.

"At this time, say two months before the final expulsion from Nauvoo, there were already, along three hundred miles of the road between that city and our Papillon Camp, over two thousand emigrating wagons, beside a large number of nondescript turn-outs, the motley make-shifts of poverty; from the unsuitably heavy cart that lumbered along mysteriously, with its sick driver hidden under its counterpane cover, to the crazy two-wheeled trundle, such as our poor employ for the conveyance of their slop barrels—this pulled along it may be by a little dry drugged heifer, and rigged up only to drag some such light weight as a baby, a sack of meal, or a pack of clothes and bedding.

"Some of them were in distress of losses upon the way. A strong trait of the Mormons was their kindness to their brute dependents, and particularly to their beasts of draught. They gave them the holiday of the Sabbath whenever it came round; I believe they would have washed them with old wine, after the example of the emigrant Carthaginians, had they had any. Still, in the slave-coast heats, under which the animals had to move, they sometimes foundered. Sometimes too they strayed off in the night, or were mired in morasses, or oftener were stolen by Indians, who found market covert for such plunder among the horse-thief whites of the frontier. But the great mass of these pilgrims of the desert was made up of poor folks, who had fled in destitution from Nauvoo, and been refused a resting-place by the people of Iowa. It is difficult fully to understand the state of helplessness in which some of these would arrive, after accomplishing a journey of such extent, under circumstances of so much privation and peril. The fact was they seemed to believe that all their trouble would be at an end if they could only come up with their comrade at the Great Camps. For this they calculated their resources, among which their power of endurance was by much the largest and most reliable item, and they were not disappointed if they arrived with these utterly exhausted.

"Beside the common duty of guiding and assisting these unfortunates, the companies in the van united in providing the highway for the entire body of emigrants. The Mormons have laid out for themselves a road through the Indian Territory, over four hundred leagues in length, with substantial, well-built bridges, fit for the passage of heavy artillery, over all the streams, except a few great rivers where they have established permanent ferries. The nearest unfinished bridging to the Papillon Camp, was that of the Corn-a-Cerf, or Elkhorn, a tributary of the Platte, distant, may-be, a couple of hours' march. Here, in what seemed to be an incredibly short space of time, there rose the seven great piers and abutments of a bridge, such as might challenge honors for the entire public spirited population of lower Virginia. The party detailed to the task worked in the broiling sun, in water beyond depth and up to

their necks, as if engaged in the perpetration of some pointed and delightful practical joke. The chief sport lay in floating along with the logs, cut from the overhanging timber up the stream, guiding them until they reached their destination, and then plunging them under water in the precise spot where they were to be secured.

“After the sorrowful word was given to halt and make preparations for winter, a chief labor became the making hay; and with every day-dawn brigades of mowers would take up the march to their positions in chosen meadows—a prettier sight than a charge of cavalry, as they laid their swaths, whole companies of scythes abreast. Before this time, the manliest, as well as most general daily labor was the herding of the cattle—the only wealth of the Mormons, and more and more cherished by them with the increasing pastoral character of their lives. A camp could not be pitched in any spot without soon exhausting the freshness of the pasture around it, and it became an ever recurring task to guide the cattle, in unbroken droves, to the nearest places where it was still fresh and fattening.

“Inside the camp the chief labors were assigned to the women. From the moment when, after the halt, the lines had been laid, the spring wells dug out, and the ovens and fireplaces built, though the men still assumed to set the guard and enforce the regulations of police, the empire of the tented town was with the better sex. They were the chief comforters of the severest sufferings, the kind nurses who gave them in their sickness those dear attentions with which pauperism is hardly poor, and which the greatest wealth often fails to buy. And they were a nation of wonderful managers. They could hardly be called housewives in etymological strictness, but it was plain that they had once been such, and most distinguished ones. Their art availed them in their changed affairs. With almost their entire culinary material limited to the milk of their cows, some store of meal or flour, and a very few condiments, they brought their thousand and one receipts into play with a success that outdid for their families the miracle of the Hebrew widow’s cruse. They learned to make butter on a march, by the dashing of the wagon, and so nicely to calculate the working of barm in the jolting heats, that as soon after the halt as an oven could be dug in the hillside and heated, their well-kneaded loaf was ready for baking, and produced good leavened bread for supper.

“But the first duty of the Mormon women was, through all change of place and fortune, to keep alive the altar fire of home. Whatever their manifold labors for the day, it was their effort to complete them against the sacred hour of evening-fall. For by that time all the out-workers, scouts, ferrymen or bridgemen, road-makers, herdsman, or haymakers had finished their tasks and come into their rest. And before the last smoke of the supper fire curled up reddening in the glow of sunset, a hundred chimes of cattle-

bells announced their looked-for approach across the open hills, and the women went out to meet them at the camp gates, and with their children in their laps sat by them at the cherished family meal, and talked over the events of the well-spent day.

“But every day closed as every day began, with an invocation of the Divine favor, without which, indeed, no Mormon seemed to dare to lay him down to rest. With the first shining of the stars, laughter and loud talking hushed, the neighbor went his way, you heard the last hymn sung, and then the thousand-voiced murmur of prayer was heard like babbling water falling down the hills. There was no austerity, however, about the religion of Mormonism. Their fasting and penance, it is no jest to say, was altogether involuntary. They made no merit of that. They kept the Sabbath with considerable strictness; they were too close copyists of the wanderers of Israel in other respects not to have learned, like them, the value of this most admirable of the Egypto-Mosaic institutions. But the rest of the week, their religion was independent of ritual observance.

“The Mormons took the young and hopeful side of discouraging mishaps. They could make sport and frolic of their trials, and often turn right sharp suffering into right round laughter against themselves. I certainly heard more jests and Joe Millers while in this Papillon camp, than I am likely to hear in all the remainder of my days. This, too, was at a time of serious affliction. Beside the ordinary suffering from insufficient food and shelter, distressing and mortal sickness, exacerbated, if not originated by these causes, was generally prevalent. In the camp nearest us on the west, which was that of the bridging party near the Corne, the number of its inhabitants being small enough to invite computation, I found, as early as the 31st of July, that thirty-seven per cent. of its inhabitants were down with the fever and a sort of strange scorbutic disease, frequently fatal, which they named the Black Canker. The camps to the east of us, which were all on the eastern side of the Missouri, were yet worse fated.

“In some of these the fever prevailed to such an extent that hardly any escaped it. They let their cows go unmilked. They wanted for voices to raise the psalm of Sundays. The few who were able to keep their feet, went among the tents and wagons with food and water, like nurses through the wards of an infirmary. Here at one time the digging got behind hand, burials were slow, and you might see women sit in the open tents keeping the flies off their dead children, sometimes after decomposition had set in.

“Though the season was late when they first crossed the Missouri, some of them moved forward with great hopefulness, full of the notion of viewing and choosing their new homes that year. But the van had only reached Grand Island and the Pawnee villages, when they were overtaken by more ill news from Nauvoo. Before the summer closed, their enemies set upon the last remnant

of those who were left behind in Illinois. They were a few lingerers, who could not be persuaded but there might yet be time for them to gather up their worldly goods before removing, some weakly mothers and their infants, a few delicate young girls, and many cripples and bereaved and sick people. These had remained under shelter, according to the Mormon statement at least, by virtue of an express covenant in their behalf. If there was such a covenant, it was broken. A vindictive war was waged upon them, from which the weakest fled in scattered parties, leaving the rest to make a reluctant and almost ludicrously unavailing defense, until the 17th day of September, when sixteen hundred and twenty-five troops entered Nauvoo and drove all forth who had not retreated before that time.

“Like the wounded birds of a flock fired into toward nightfall, they came struggling on with faltering steps, many of them without bag or baggage, beast or barrow, all asking shelter or burial, and forcing a fresh repetition of the already divided rations of their friends. It was plain now, that every energy must be taxed to prevent the entire expedition from perishing. Further emigration for the time was out of the question, and the whole people prepared themselves for encountering another winter on the prairie.

“Upon the Pottawatomie lands, scattered through the border regions of Missouri and Iowa, in the Sac and Fox country, a few among the Iowas, among the Poncahs in a great company upon the banks of the L'Eau qui Coule, or Running Water River, and at their Omaha winter quarters, the Mormons sustained themselves through the heavy winter of 1846-'47. It was the severest of their trials. And if I aimed at rhetorical effect, I would be bound to offer you a minute narrative of its progress, as a sort of climax to my history. But I have, I think, given you enough of the Mormons' sorrows.

“This winter was the turning point of the Mormon fortunes. Those who lived through it were spared to witness the gradual return of better times; and they now liken it to the passing of a dreary night, since which they have watched the coming of a steadily brightening day.

“Before the grass growth of 1847, a body of one hundred and forty-three picked men, with seventy wagons drawn by their best horses, left the Omaha quarters, under the command of the members of the High Council who had wintered there. They carried little with them but seed and farming implements, their aim being to plant spring crops at their ultimate destination. They relied on their rifles to give them food, but rarely left their road in search of game. They made long daily marches, and moved with as much rapidity as possible.

“Against the season when ordinary emigration passes the Missouri, they were already through the South Pass; and a couple of short days' travel beyond it, entered upon the more arduous portion of their journey. It lay in earnest through the Rocky Moun-

tains. They turned Fremont's Peak, Long's Peak, the Twins, and other king summits, but had to force their way over other mountains of the rugged Utah range, sometimes following the stony bed of torrents, the headwaters of some of the mightiest rivers of our continent, and sometimes literally cutting their road through heavy and ragged timber. They arrived at the grand basin of the Great Salt Lake, much exhausted, but without losing a man, and in time to plant for a partial autumn harvest.

"Another party started after these pioneers, from the Omaha winter quarters in the summer. They had five hundred and sixty-six wagons, and carried large quantities of grain, which they were able to put in the ground before it froze.

"The same season also, these were joined by a part of the battalion and other members of the church, who came eastward from California and the Sandwich Islands. Together, they fortified themselves strongly with sun-brick wall and block-houses, and living safely through the winter, were able to tend crops that yielded ample provision for the ensuing year.

"In 1848, nearly all the remaining members of the church left the Missouri country in a succession of powerful bands, invigorated and enriched by their abundant harvests there; and that year saw fully established their Commonwealth of the New Covenant, the future State of DESERET."

Brigham Young's object in selecting Salt Lake as the site of his new city and the center of his new kingdom, was to separate his people from the rest of the world, and the place was admirably chosen for the purpose; but at the termination of the Mexican war, this whole territory was ceded to the United States, and Young found himself and his people again under the government of the United States, and determining to make the best of it, he hastened to organize the new State of Deseret with the following boundaries:

"Commencing at the thirty-fifth degree of north latitude where it crosses the one hundred and eighth degree of longitude west of Greenwich, thence south to north boundary of Mexico, thence west to, and down the river Gila on the northern line of Mexico, and on the northern boundary of Lower California to the Pacific Ocean, thence northwesterly to one hundred and eighteen degrees thirty minutes west of Greenwich; thence north to where said line intersects the dividing ridge of the Sierra Nevada mountains; thence north, along the summit, to the dividing range separating the waters flowing into the Columbia River from those running into the Great Basin; thence easterly to the summit of the Wind River chain of mountains; thence southeast and south by the dividing range of mountains which separate the waters flowing into the Gulf of Mexico from those flowing into the Gulf of California to the place of beginning.

In 1850, the present Territory of Utah was organized, under an Act of Congress, and Brigham Young was soon after appointed

Governor by the President, and from this period the Territory has been *nominally* under the laws of the United States.

The main geographical characteristic of Utah is, that anomalous feature in our continent, which is more Asiatic than American in its character, known as the Great Basin. It is about five hundred miles long, east and west, by two hundred and seventy-five in breadth, north and south, and occupies the greater part of the central and western portions of the territory. It is elevated near five thousand feet above the level of the sea, and is shut in all around by mountains with its own system of lakes and rivers; and what is a striking feature, none of which have any connection with the ocean. The general character of the basin is that of a desert. It has never been fully explored, but so far as it has been, a portion of it is found to consist of arid and sterile plains, another of undulating table-lands, and a third of elevated mountains, a few of whose summits are capped with perpetual snow. Those range nearly north and south, and rise abruptly from a narrow base to a height of from two thousand to five thousand feet. Between these ranges of mountains are the arid plains, which deserve and receive the name of desert. From the snow on their summits and the showers of summer originate small streams of water from five to fifty feet wide, which eventually lose themselves, some in lakes, some in the alluvial soil at their base, and some in dry plains. Among the most noted of these streams is Humboldt's or Mary's River, well remembered by every California emigrant, down which he pursues his course for three hundred miles, until it loses itself in the ground, at a place called St. Mary's Sink, where its waters are of a poisonous character.

The *Great Salt Lake* and the Utah Lake are in this basin, toward its eastern rim, and constitute its most interesting feature—one a saturated solution of common salt—the other fresh—the Utah about one hundred feet above the Salt Lake, which is itself four thousand two hundred above the level of the sea: they are connected by Utah River—or, as the Mormons call it, the Jordan—which is forty-eight miles in length. These lakes drain an area of from ten to twelve thousand square miles.

The Utah is about thirty-five miles long, and is remarkable for the numerous and bold streams which it receives, coming down from the mountains on the southeast, all fresh water, although a large formation of rock-salt, imbedded in red clay, is found within the area on the southeast, which it drains. The lake and its affluents afford large trout and other fish in great numbers, which constitute the food of the Utah Indians during the fishing season. The Great Salt Lake has a very irregular outline greatly extended at time of melting snows. It is about seventy miles in length; both lakes ranging north and south, in conformity to the range of the mountains, and is remarkable for its predominance of salt. The whole lake water seems thoroughly saturated with it, and every evaporation of the water leaves salt behind. The rocky shores of the

islands are whitened by the spray, which leaves salt on everything it touches, and a covering like ice forms over the water which the waves throw among the rocks. The shores of the lake, in the dry season, when the waters recede, and especially on the south side, are whitened with incrustations of fine white salt; the shallow arms of the lake, at the same time under a slight covering of briny water, present beds of salt for miles, resembling softened ice, into which the horses' feet sink to the fetlock. Plants and bushes, blown by the wind upon these fields, are entirely incrustated with crystallized salt, more than an inch in thickness. Upon this lake of salt the fresh water received, though great in quantity, has no perceptible effect. No fish or animal life of any kind is found in it.

The Rio Colorado, with its branches, is about the only stream of note in Utah which is not within the Great Basin. The only valleys supposed to be inhabitable in the vast country in the eastern rim of the Great Basin and the Rocky Mountains, are the Valleys of the Uintah and Green River, branches of the Colorado, and whether even these are so, is extremely problematical. The country at the sources of this great river is incapable of supporting any population whatever.

The climate of Utah is milder and drier in general than it is in the same parallel on the Atlantic coast. The temperature in the Salt Lake Valley in the winter is very uniform, and the thermometer rarely descends to zero. There is but little rain in Utah, except on the mountains, from the 1st of May until the 1st of October; hence agriculture can only be carried on by irrigation.

In every portion of the territory where it has been attempted, artificial irrigation has been found to be indispensable; and it is confidently believed that no part of it, however fertile, will mature crops without it, except perhaps on some small patches on low bottoms. But limited portions, therefore, of even the most fertile and warmest valleys, can ever be made available for agricultural purposes, and only such as are adjacent to streams and are well located for irrigation. Small valleys surrounded by high mountains, are the most abundantly supplied with water, the streams being fed by melting snows and summer showers.

The greater part of Utah is sterile and totally unfit for agriculture, and is uninhabited and uninhabitable, except by a few trappers and some roaming bands of Indians, who subsist chiefly upon game, fish, reptiles, and mountain crickets. The general sterility of the country is mainly owing to the want of rain during the summer months, and partly from its being elevated several thousand feet above the level of the sea.

The whole country is almost entirely destitute of timber. The little which there is may be found on the side of the high, rocky mountains, and in the deep mountain gorges, whence issue the streams. On the table-lands, the gently undulating plains and the isolated hills, there is none. There are, however, small groves of

cotton-wood and box-alder on the bottoms of some of the principal streams.

A species of artemisia, generally known by the name of wild sage, abounds in most parts of the country, where vegetation of any kind exists, but particularly where there is not warmth and moisture sufficient to produce grass.

The inhabitable portions of the Great Basin are supposed to be capable of supporting a population of about 200,000.

The Great Salt Lake Valley is the largest known in the Great Basin, being about one hundred and twenty miles long, and from twenty to forty broad, but the Salt Lake occupies much of its northern portion. The surface of its center is level, ascending gently on either side toward the mountains. This valley is regarded as one of the healthiest portions of the globe; the air is very pure. Its altitude is forty-three hundred feet above the level of the sea; and some of the mountains on the east of the valley are more than a mile and a quarter high, and covered with perpetual snow; while in the valley the thermometer frequently rises above one hundred degrees. Near the city are two saline mineral springs, respectively of the temperature of one hundred and eight and one hundred and twenty-five degrees. The character of the soil of each of the valleys that are inhabitable is as follows: one portion of them is a vegetable loam, another a marly loam, and a third a gravelly stratum, containing some silicia. The other valleys bear a general resemblance to that named, except being smaller.

By means of irrigation, the Mormon valleys are made exceedingly productive. Wheat, rye, barley, buckwheat, oats and Indian corn are their agricultural products, and all the garden vegetables peculiar to the Middle and Western States are produced in great perfection. Tobacco and sweet potatoes can be produced in limited quantities. So fertile is their soil, that an average crop of wheat is fifty bushels to the acre. The system of irrigation prevents rust or smut striking the crop, and renders it sure.

The territory of the Mormons is unequaled as a stock-raising country, and they are, to a great extent, a pastoral people. The finest pastures of Lombardy are not more estimable than those on the east side of the Utah Lake and Jordan River. We find here that cereal anomaly, the bunch grass. It grows only on the bottoms of the streams, and on the table-lands of the warmest and most fertile valleys. It is of a kind peculiar to cold climates and elevated countries, and is, we presume, the same as the *grama* of New Mexico. In May, when the other grasses start, this fine plant dries upon its stalk, and becomes a light yellow straw, full of flavor and nourishment. It continues thus through what are the dry months of the climate until January, and then starts with a vigorous growth, like that of our own winter wheat in April, which keeps on until the return of another May. Whether as straw or grass, the cattle fatten on it the year round. The numer-

ous little dells and sheltered spots that are found in the mountains are excellent sheep-walks. Hogs fatten on a succulent bulb or tuber, called the seacoe or seegose root, which is highly esteemed as a table vegetable by the Mormons.

Salt Lake City is pleasantly situated on a gentle declivity near the base of a mountain, about two miles east of the Utah outlet, or the River Jordan, and about twenty-two miles southeast of the Salt Lake. It is nearly on the same latitude with New York City, and is, by air lines, distant from New York two thousand one hundred miles; from St. Louis, one thousand two hundred; from San Francisco, five hundred and fifty; and from Oregon City and Santa Fe, each six hundred. During five months of the year it is shut out from all communication with the North, East or West, by mountains rendered impassable from snow. Through the town runs a beautiful brook of cool, limpid water, called City Creek. The city is laid out regularly, on an extensive scale; the streets crossing each other at right angles, and being each eight rods wide. Each lot contains an acre and a quarter of ground, and each block or square eight lots. Within the city are four public squares. The city and all the farming lands are irrigated by streams of beautiful water, which flow from the adjacent mountains. These streams have been, with great labor and perseverance, led in every direction. In the city, they flow on each side of the different streets, and their waters are let upon the inhabitants' gardens at regular periods, so likewise upon the extensive fields of grain lying to the south.

The greater part of the houses which had been built up to the close of 1850, were regarded as merely temporary; most of them were small but commodious, being, in general, constructed of adobe or sun-dried brick. Among the public buildings are a house for public worship, a council-house, a bath-house at the Warm Spring; and it is in contemplation to erect another temple more magnificent than that they formerly had at Nauvoo. On the temple square they intend to have a garden that will cost at least \$100,000 at the commencement. Their missionaries have already made arrangements in the Eastern States, in Great Britain, France, Italy, Denmark, the German States, and in the islands of the sea, to gather the choicest seeds and fruits, and everything that can beautify and adorn it.

Public free-schools are established in the different wards into which the city is divided, in which the ordinary branches are taught, and in some the Latin, Greek, French and German languages, and that of the Society Islands. East of the city, a mile square is laid off for a State University, and the Mormons have appropriated for this object \$5,000 a year for twenty years, to be paid out of the public treasury.

The pioneer party of the Mormons left Council Bluffs, Iowa, early in April, 1847. On the 23d of July, the first camp moved into the city. In the afternoon of the same day, they had three

plows and one harrow at work, and commenced building the first dam for irrigation. The next day they planted five acres of potatoes, and four days later proceeded to lay off the city; and so rapid had been their progress, that in 1850, three years after, it contained about eleven thousand inhabitants, who were mostly engaged in agriculture.

The city of Provo is on Provo River, on the east side of Utah Lake, and about fifty miles south of Salt Lake City. At the settlement in Sanpetch Valley are about one hundred and fifty families. In that valley are, it is said, many ruins covered with hieroglyphics. One place in particular is called by the Indians "God's Temple." Here also remains of ancient pottery, both glazed and unglazed, are found in great abundance, and large quantities of bituminous coal.

For a brief period, the trials, persecutions and hardships the Mormons endured appeared to have exerted a healthful and purifying influence on their character and conduct; but with returning prosperity came a new throng of adventurers, sharpers and knaves, and the forced morality and abstemiousness of the mass was abandoned with the dawn of returning safety and prosperity, and Salt Lake City is fast becoming as notorious for its indecencies, immorality, vice and crime as Nauvoo was in the days of its prosperity.

There is among the Mormons no security of life or property; the *church* is above law and controls the conscience and acts of its members at will. The members of the legislature are ostensibly elected by the people, but, by fair means or fraud, the nominees of the church are sure to be elected, and in a community so banded together it is not strange that robberies, extortions, and murders are things of common occurrence. Licentiousness, the legitimate offspring of polygamy, exists to an alarming extent, equaled nowhere out of the purlieus of "Five Points," in New York city; all sense of decency is lost sight of, an intercourse as open and promiscuous as among the cattle of the fields exists among them. There are numerous instances where a man has taken a woman and her daughters for wives, of the niece being *sealed* to the uncle, and the sister to her brother; and there is talk now of allowing the father to seal his daughter to himself. The dignitaries of the church are peculiarly skillful in procuring young girls for wives. Young men find it impossible to obtain one wife, consequently the affair of Absalom and his father's concubine is often acted on by the youthful saint. This system must ere a great while result in the disorganization of the community. States are made up of families, and we may as well expect a building to stand after its walls are torn away, as that a community will flourish wherein hatred, strife, and discord rankle in the bosom of the families of which it is composed. Their schools are so wretchedly managed that, instead of places of instruction, they are hotbeds of vice; the children grow up ungoverned and ungovernable. The school-room is

•

not only an arena of riot and disorder, but a seminary of vice—an incipient, embryo hell, where the most filthy and obscene ideas are instilled. It is a common thing for children there to retail the disgusting intimacies they have witnessed at home. The open profligacy and licentiousness of these youths are equaled nowhere save in the histories of Sodom and Gomorrah. The result of this precocious vice, of the licentiousness and brutality of the old, and the disgust which this has created in the minds of all those possessing a remnant of decency and morality, is already apparent in the rapid diminution of the numbers of the saints. When Joseph was at the height of his power at Nauvoo, his disciples in various parts of the earth numbered about 200,000. The Mormons boasted even a greater number. In 1853, they stated their number to be 150,000; but the actual number probably did not exceed 60,000 at that time.

In 1853, the population of Utah was claimed to be about 30,000; and although missionaries are sent out regularly to all parts of the globe, preaching this new and mysterious doctrine which promises to the believer plenty, prosperity, and a gratification of his sensual desires here, and a haven of rest, of enjoyment and happiness hereafter; and although the boldness with which these missionaries assert their divine commission, and the eagerness with which the ignorant, the destitute, and the superstitious are ever ready to welcome any new doctrine claiming supernatural authority, and promising enjoyment of such a nature as their degraded and brutal natures can most readily appreciate, are bringing in new converts daily, and crowds of bankrupts in purse, in reputation and honesty, driven from their homes by the force of public opinion, or anxious to try their talents where cunning, boldness, and unscrupulous ambition are the only requisites to success, and are always sure of affording the means and opportunity of spending a life of licentiousness and profligacy, are daily flocking into the New Zion; yet, notwithstanding these constant sources of supply, Mormonism is on the decrease, and it is to be hoped, that the saints will soon disappear from the land they have made infamous by their crimes; and the body of ignorant dupes, tools, and fanatics will gradually become absorbed and lost in a better population, and our Union will never be disgraced by the admission of a State in which licentiousness and crime are made part of its religious institutions.

A storm is evidently gathering about Utah, and the national authorities have determined, at every risk, to displace Brigham Young. A few months longer and the question must be settled. Either the master-spirit of this imposture must abandon his post of governor, or he must venture upon the terrible experiment of battling against the troops of the United States. In such an issue there would, in the end, be but one result, and the wretched Mormons, however desperate, daring, and courageous, would either be annihilated or compelled to fly for their lives. In the name of humanity, however, we repeat the hope, that such an awful alternative will be avoided.

THE GREAT SALT DESERT OF UTAH.

THE Great Salt Desert is situated just beyond the Great Salt Lake, on one of the routes of emigration to California. Its exact extent is unknown, but it covers a surface of several thousand square miles. A vivid sketch of a journey across this dreary waste is given by a gentleman who crossed it on the 3d of August, 1846, on his way to California, from which we extract a description of some of the wonderful phenomena which he witnessed.

The mirage, a beautiful phenomenon, here displayed its wonderful illusions, in a perfection and with a magnificence surpassing any presentation of the kind I had previously seen. Lakes, dotted with islands and bordered by groves of gently waving timber, whose tranquil and limpid waves reflected their sloping banks and the shady islands in their bosoms, lay spread out before us, inviting us by their illusory temptations to stray from our path and enjoy their cooling shades and refreshing waters. These, fading away as we advanced, beautiful villas adorned with edifices, decorated with all the ornaments of suburban architecture, and surrounded by gardens, shaded walks, parks, and stately avenues, would succeed them, renewing the alluring temptations to repose by enticing the vision with more than Calypsan enjoyments or Elysian pleasures. These, also melting from our view, as those before, would give place to a vast city with countless columned edifices of marble whiteness, and studded with domes, spires, and turreted towers, rising upon the horizon of the plain, astonishing us with its stupendous grandeur and sublime magnificence. But it is in vain to attempt a description of these singular and extraordinary phenomena. Neither prose nor poetry, nor the pencil of the artist can adequately portray their beauties. The whole distant view around, at this point, seemed like the creations of a sublime and gorgeous dream or the effect of enchantment.

As we moved onward, a member of our party in the rear called our attention to a gigantic moving object on our left, at an apparent distance of six or eight miles. It is very difficult to determine distances accurately on these plains. Your estimate is based upon the probable dimensions of an object, and unless you know what the object is, and its probable size, you are liable to great deception. The atmosphere frequently seems to act as a magnifier, so much so that I have often seen a raven, perched upon a low shrub or an undulation of the plain, answering to the outlines of a man on horseback. But this object was so enormously large, considering its apparent distance and its movement forward parallel with ours so distinct, that it greatly excited our wonder and curiosity.

About two o'clock P. M., we discovered through the smoky vapor, the dim outlines of the mountains before us, the foot of which was to terminate our day's march, if we were so fortunate as to reach it. But still we were a long and weary distance from it, and from the "water and grass" which we expected to find

there. A cloud rose soon afterward from the south, accompanied by several distant peals of thunder, and a furious wind making across the plain, and filling the whole atmosphere around us with fine particles of salt, drifted it in heaps like the newly fallen snow. Our eyes became nearly blinded and our throats choked with the saline matter, and the very air we breathed tasted of salt.

During the subsidence of this tempest, there appeared upon the plain one of the most extraordinary phenomena, I dare to assert, ever witnessed. Diagonally in point, to the right—our course being west—there appeared the figures of a number of men and horses, some fifteen or twenty. Some of these figures were mounted and others dismounted; and appeared to be marching on foot. Their faces and the heads of their horses were turned toward us, and at first they appeared as if they were rushing down upon us. Their apparent distance, judging from the horizon, was from three to five miles. But their size was not correspondent, for they seemed nearly as large as our own bodies, and consequently were of gigantic stature. At the first view I supposed them to be a small party of Indians—probably the Utahs—marching from the opposite side of the plain. But this seemed to me scarcely probable, as no hunting or war-party would be likely to take this route. I called to some of our nearest men to hasten forward, as there were men in front coming toward us. Very soon the fifteen or twenty figures were multiplied into three or four hundred, and appeared to be marching forward with the greatest action and speed. I then conjectured that they might be Captain Fremont and his party with others from California, returning to the United States by this route, although they seemed to be too numerous even for this. I spoke to the one who was nearest to me, and asked him if he noticed the figures of men and horses in front? He answered that he did, and that he had observed the same appearances several times previously, but that they had disappeared, and he believed them to be optical illusions, similar to the mirage. It was then, for the first time, so perfect was the deception, that I conjectured the probable fact that these figures were the reflection of our own images by the atmosphere, filled as it was by fine particles of crystallized matter, or by the distant horizon covered by the same substance. This induced a more minute observation of the phenomenon, in order to detect the deception, if such it were. I noticed a single figure, apparently in front, in advance of all others, and was struck with its likeness to myself. Its motions, too, I thought, were the same as mine. To test the hypothesis above suggested, I wheeled suddenly around, at the same time stretching my arms out their full length, and turned my face sideways, to notice the movements of this figure. It went through precisely the same motions. I then marched deliberately, and with long strides, several paces; the figure did the same. To test it more thoroughly, I repeated the experiment, and with the same result. The fact was then clear. But it was still more verified,

for the whole array of this numerous shadowy host, in the course of an hour, melted entirely away, and was seen no more. The phenomenon, however, explained and gave the history of the gigantic specters which appeared and disappeared so mysteriously at an early hour of the day. The figures were our own shadows, produced and reproduced by the mirror-like composition impregnating the atmosphere and covering the plain. I cannot here more particularly explain or refer to the subject. But this phantom population, springing out of the ground, as it were, and arraying itself before us as we traversed this dreary and heaven-condemned waste, although we were entirely convinced of the cause of the apparition, excited those supernatural emotions so natural to all mankind.

MINNESOTA.

MINNESOTA derives its name from the Minnesota or St. Peter's River. The water of this river is clear, but has a milky hue, owing to the peculiar colored clay of its bed. *Mini*, in the Dacotah language, means "water," and that of *sotah*, signifies this peculiarity of its color, but its precise shade of meaning cannot be translated in a single word; it is however, sometimes rendered muddy or turbid.

In 1679, Father Hennepin and two others, when taken prisoners in La Salle's expedition, accompanied the Indians to their villages, one hundred and eighty miles above the Falls of St. Anthony. Before the termination of that century, other Frenchmen also visited Minnesota. In 1695, M. Le Seur discovered, as he supposed, a copper mine on Blue Earth River, a tributary of the Minnesota. He returned in 1700, built a fort, remained during the winter, and in the spring descended the Mississippi with one hundred tons of blue and green earth destined for France; but it is not known that he ever returned. Within the succeeding sixty years it was frequently visited by the French fur-traders. After them came the British fur-traders. The British Northwest Fur Company occupied trading-posts at Sandy Lake, Leech Lake, and other central points within the limits of Minnesota. That at Sandy Lake was built in 1794, the year of Wayne's victory. It was a large stockade, and contained two rows of buildings used as dwellings, provision-store, and workshops. Fort William, on the north side of Lake Superior, eventually became their principal depot.

The first actual settlement for permanent objects was made in 1811, by Lord Selkirk on Red River, a stream, which, rising in Minnesota, runs north into Lake Winnipeg. The village he established, Pembina, is still flourishing. In 1805, Lieutenant Pike was sent by government to explore the sources of the Missis-

sippi. Winter overtaking him ere he reached Crow Wing, he was unable to accomplish this object, and returned in the spring, after having first purchased the site of Fort Snelling, where in 1819, barracks were erected and a garrison stationed by the United States, which was the first American establishment in the country. Further explorations were made in 1820, by Governor Cass; in 1823, by Major Long, and in 1832, by Henry R. Schoolcraft, the last of whom discovered the source of the Mississippi.

From 1836 to 1839, M. Nicollet (under whom was John C. Fremont), was engaged in making geographical surveys in this region, and ten years later, a scientific corps under Dr. Dale Owen, by their explorations, revealed much additional information respecting the topography and geology of this northern country. All these surveys and explorations were by order of government.

Minnesota, from its earliest discovery, has been the residence of two powerful tribes, the Chippewas or Ojibbeways, and the Sioux—pronounced *Sooz*—or Dacotahs. The word Chippewa is a corruption of the term Ojibbeway, and that of Dacotah signifies allied tribes. The Winnebago from Iowa, and the Menonomies from Wisconsin have recently been removed to Minnesota. They are both small tribes compared to the above.

The Sioux claim a country equal in extent to some of the most powerful empires of Europe, including the greater part of the country between the Upper Mississippi and the Missouri. The country from Rum River to the River De Corbeau has been alike claimed by them and the Chippewas, and has been the source of many bloody encounters within the last two hundred years. The Sioux have destroyed immense numbers of their race, and are one of the most warlike tribes of North America. They are divided into six bands, comprising in all twenty-eight thousand souls. Beside these, a revolted band of the Sioux eight thousand strong, called Osinipoilles, reside just east of the Rocky Mountains upon Saskatchewan River of British America.

The Sioux subsist upon buffalo meat and the wild fruits of their forests. The former is called *pemmican*, and is prepared in winter for traveling use in the following manner. The lean parts of the buffalo are cut into thin slices, dried over a slow fire in the sun, or by exposing it to frost—pounded fine, and then with a portion of berries, mixed with an equal quantity of fat from the hump and brisket, or with marrow in a boiling state and sowed up tightly in sacks of green hide, or packed closely in baskets of wicker-work. This “pemmican” will keep for several years.

They also use much of the *wild rice*, which grows in great abundance in the lakes and head streams in the Upper Mississippi country. The rivers and lakes of the Sioux and Chippewa country are said to produce annually several millions of bushels of it. It is said to be equally as nutritious and palatable as the Carolina rice. It grows in water from four to seven feet deep, which has a

muddy bottom. The plant rises from four to eight feet above the surface of the water, about the size of the red cane of Tennessee, full of joints, and of the color and texture of bulrushes. The stalks above the water, and the branches which bear the grain resemble oats. To these strange grain fields, wild ducks and geese resort for food in the summer; and to prevent it being devoured by them, the Indians tie it when in the milky state, just below the head, into large bunches. This arrangement prevents these birds from pressing the heads down when within their reach. When ripe, the Indians pass among it with canoes lined with blankets, into which they bend the stalks, and whip off the grain with sticks; and so abundant is it that an expert squaw will soon fill a canoe. After being gathered it is dried and put into skins or baskets for use. They boil or parch it, and cut it in the winter season with their pemmican. Beside the pemmican and wild rice, the country abounds in sugar-maple, from which the Indians make immense quantities of sugar. Their country abounds with fine groves, interspersed with open plains, clothed with rich wild grasses—their lakes and rivers of pure water are well stored with fish, and their soil with the whortleberry, blackberry, wild plumb, and crab-apple; so that this talented and victorious race possess a very desirable and beautiful territory.

The Chippewas inhabit the headwaters of the Mississippi, Otter-tail and Leech, De Corbeau and Red Rivers, and Winnipeg Lake. They are a very powerful tribe, almost equaling the Sioux in numbers: they speak a copious language, and are of low stature and coarse features. The women have an awkward side-at-a-time gait; which proceeds from their being accustomed, nine months in the year, to wear snow-shoes, and drag sledges of a weight from two hundred to four hundred pounds. No people are more attentive to comfort in dress than the Chippewas. It is composed of deer and fawn-skins, dressed with the hair on for the winter, and without the hair for the summer wear.

They are superstitious in the extreme. Almost every action in their lives is influenced by some whimsical notion. They believe in the existence of a good and evil spirit that rule in their several departments over the fortunes of men; and in a state of future rewards and punishments.

Minnesota was erected into a territory of the United States in 1849. The whole white population in June of that year, amounted to only four thousand seven hundred and eighty. Its average measurement north and south, as well as east and west, is about four hundred miles, and its area is not far from one hundred and sixty-six thousand square miles.

Minnesota has some peculiar natural features; the most remarkable of which is the immense number of lakes of all sizes, which adorn its surface, many of which are of exquisite beauty. Another peculiarity is its uniformity of surface. There are a few elevations above the general average, called mounds; but with these excep-

tions, the surface is marked only by ravines running from the general level down to the beds of the streams. It is a beautiful arrangement of upland and lowland plains that give it an aspect peculiar to itself: it is neither a mountainous, nor a hilly, nor a flat country; but exhibiting undulations of surface that are not entitled to these usual appellations. The French, who first explored it, were so forcibly impressed with this, that they employed new terms to designate it.

But there is still sufficient variety in the irregularities of the surface, and the distribution of the watercourses, woodlands, and prairies. Another most prominent feature is the vegetable covering of the surface. These are immense tracts of land entirely destitute of tree or shrub, and covered only with a luxuriant hue of wild grass; and from April to October, adorned with flowers of every hue and variety.

The Mississippi has its source in Itasca Lake, a beautiful sheet of pure water, about eight miles in extent, and elevated one thousand five hundred and seventy-five feet above the Mexican Gulf, and distant from it two thousand eight hundred and ninety miles. Where it issues from the lake, the river is sixteen feet wide, and four inches deep, very transparent, with a swift current. From this point it traverses, by a very circuitous route, a distance of seven hundred miles to the falls of St. Anthony, the last three hundred miles of which can be rendered navigable for steamboats of a light draught: in its course it expands into several beautiful lakes. For two hundred miles north of the mouth of the St. Croix, it meanders through a rich valley of prairie and oak openings. The banks above the Falls of St. Anthony are from ten to thirty feet high. The river runs over a gravelly bed, and is fed by innumerable small rivers of clear and rapid water; the soil is rich and well adapted to raising wheat, corn, oats, and potatoes, the last of which are much superior to those of the Middle States. Above the mouth of the Crow Wing, on the Mississippi, the *pinery* extends north for three or four hundred miles, forming an extensive forest. The country bordering upon the headwaters of the river, is interspersed with large and beautiful lakes, which teem with excellent fish. The white fish are found in them, especially in the large lakes, in great abundance. Red Lake exceeds one hundred miles in circumference; Leech Lake more than fifty miles, and probably one quarter of Minnesota is covered with a diversity of lakes of all sizes and forms, sparkling with the purest water.

There are two falls on the Mississippi. The upper is two hundred and sixty-one miles from its source; there it plunges over the Little Falls, or Kabikon Rapids, falling nine feet in eighty yards. St. Anthony's Falls are about two hundred and fifty miles above the northern boundary of Illinois. They were named by Father Hennepin, in honor of St. Anthony, the patron saint of fishes. The river here is a little over one-third of a mile in width, and falls perpendicularly sixteen and a half feet: it is there divided

into two channels by a small islet, called Cataract Island. Above and below the river is exceedingly rapid. About fifty miles below the falls is Lake Pepin, called by Father Hennepin "The Lake of Tears," a beautiful expansion of the river, some twenty-five miles long, and from three to five miles wide. On the east side of this lake is a bold rock, over four hundred feet in height, called Lover's Leap.

The Missouri bounds Minnesota on the west and southwest. The Minnesota or St. Peter's River rises in a region of lakes, and flowing through a beautiful and fertile valley, after a course of four hundred and seventeen miles, enters the Mississippi eight miles below the Falls of St. Anthony; it is navigable, at times, one hundred and sixteen miles from its mouth for steamers. The James River flows through a broad and fertile valley, and enters the Missouri. The Sioux enters the same stream, after a course of three hundred and fifty miles, through an extensive and fertile valley. The St. Croix and Crow Wing are also important streams. The Red River of the North rises in the central part of Minnesota, drains a large extent of territory, and, flowing north, enters Winnipeg Lake, and thence into Hudson's Bay. Its valley is exceedingly productive, mostly rich prairie, skirted with fine groves of timber. The principal settlements in this valley are mostly north of the line in the British territory. In the northern part of Minnesota, canoe navigation, in almost every direction, with short portages, is practicable by means of the numerous rivers, whose sources are nearly interlocked or connected by chains of lakes.

Minnesota has ever been a favorite resort for the prosecution of the fur-trade. Buffalo, elk, deer, bear, beaver, and other wild animals have abounded, but are fast disappearing before the Indian's rifle. Much of the soil is very fertile, and the climate is well adapted to the culture of wheat, barley, oats, and particularly potatoes. Indian corn thrives as well as in Northern New York, or in New England. The lakes abound in wild rice, which is gathered in great quantities by the Indians, but which, owing to their method of drying, has a very smoky taste. They also make immense quantities of maple-sugar. Cranberries grow in great abundance in the marshes and swamps, and are gathered to a considerable extent for exportation.

The natural productions of Minnesota, its beautiful lakes, its fine forests of pine, and groves of hard and soft wood, its copious springs, and abundance of water power, render it peculiarly adapted to a rapid settlement. The climate is salubrious; bilious and intermittent fevers are comparatively unknown. The temperature is remarkably uniform, sudden changes from heat to cold rarely occurring; the air is exceedingly pure and bracing, and the winters very dry, so that there is far less suffering from cold than in the damp and changeable weather of the winters farther south. Frosts sufficiently severe to injure vegetation rarely occur before

about from the 15th to the 20th of September, and sometimes not before October; that is, as far south as St. Anthony's Falls. Steamboat navigation usually continues between St. Paul and St. Louis from about the 1st of April until some time in November.

The principal towns of Minnesota are:

Winona, the county seat of Winona county; it is situated forty miles above La Crosse, and one hundred and fifty below St. Paul. It is but three years old, and now numbers about 2,500 inhabitants.

Red Wing, six miles above Lake Pepin, is the county seat of Goodhue county, and has a population of upward of 1,500, and is rapidly improving. The Hamlin University, Methodist, is located here, and there are at present upward of seventy students in attendance. The Presbyterians are building a church here; there is an ably conducted newspaper and a land office.

Hastings is twenty-five miles below St. Paul, and is a beautiful and thriving town, containing upward of 1,500 inhabitants, and bids fair to become one of the most important towns below St. Paul.

St. Paul, the capital of the territory and seat of justice of Ramsay county, is pleasantly situated on the east bank of the Mississippi River, upon a plain some eighty feet above the river, and eight hundred feet above the Gulf of Mexico. The town was surveyed in 1845, and as late as the spring of 1847, there were but three white families upon the ground now occupied by a city of 10,000 intelligent and industrious American citizens.

Of manufactories, there is one mill, with machinery, driven by an engine of seventy horse-power, capable of turning out 32,000 feet lumber, 20,000 shingles, 16,000 laths, and planing, tongueing and grooving 12,000 feet of flooring every day. Beside this, there are four other mills of less capacity, but producing from 5,000 to 10,000 feet of lumber per day. There are also two grist mills, one foundry, one door, sash and blind factory, etc. An extensive establishment for the manufacture of agricultural implements is about going in operation.

Large and substantial edifices of stone and brick are being erected, indicating that architectural taste and wealth, civilization and refinement, are here. Of the principal public buildings, mention may be made of the State-house, first Presbyterian Church, Baldwin School, Court-house, public Market-house, Winslow Hotel, Santominy Hotel, and the Fuller House. The latter building is one hundred and twenty feet square, and five stories high. In addition to many business houses and dwellings, there are now in process of erection, or about to be commenced, a Catholic cathedral, a Masonic hall, a theater, and an Odd Fellows' hall, all to be splendid buildings. The material now preparing for the cathedral indicates that it will be one of the most magnificent buildings in the West.

Fort Snelling is situated at the junction of the Minnesota with the Mississippi. In 1819, the fort buildings were erected, under

the supervision of Colonel Snelling. Being no longer needed as a fort, it is used as a rendezvous for soldiers, and a store-house, where supplies for the interior are deposited.

Shakopee, the county seat of Scott county, is situated on the Minnesota River, thirty miles from St. Paul. A few years ago this was the site of an Indian village, occupied by the band of Shakopee, a noted Sioux chief. It now contains eight hundred inhabitants, two churches, good schools, and a newspaper establishment.

Le Sueur, the county seat of Le Sueur county, though settled less than a year ago, contains 2,500 inhabitants, and is rapidly increasing.

Minneapolis, the county seat of Hennepin county, is beautifully situated on the west bank of the Mississippi, directly opposite to the City of St. Anthony. Its present population is about 2,000.

The suspension bridge between St. Anthony and Minneapolis is worthy of notice. As a work of beauty and art, it can hardly be surpassed while at the same time it has the appearance of great durability and solidity; its massive cables being firmly anchored on either side in the solid rock. The work was undertaken in the spring of 1854, and completed about the 1st of July, 1855. The company have expended something over \$50,000 on this work, and certainly have occasion to be proud of their labors, for it is the first suspension bridge ever built in a territory, and the first to span the "Father of Waters."

City of St. Anthony was first settled in 1849, and now contains a population of 3,500.

The admirable situation of St. Anthony for manufacturing purposes is the first idea that strikes the mind as one surveys its location. Situated on the great "Father of Waters," whose supply never fails; the banks (above the cataract) almost level with the water; a descent of some sixty feet within a mile; the channel conveniently divided by islands, easy of access, and affording unequalled facilities for the economical use of water-power, both banks being capable of being sluiced for a mill, and the water used to an unlimited extent; abundance of stone at hand suitable for the erection of manufacturing edifices—all these form a combination of advantages seldom found in one locality. Add to this that it is at the head of navigation on the Mississippi, surrounded by an agricultural district which is excelled by none in the Union, which produces in rich luxuriance all the cereals, is admirably adapted to fruit, and unsurpassed for grazing, and you have all the elements to constitute a great manufacturing metropolis. The location of St. Anthony is also exceedingly favorable for controlling a large amount of country trade. The county of Hennepin, and all the north part of Ramsay and Benton counties, are natural auxiliaries and tributaries of this place.

The Falls of St. Anthony.—In 1680, Louis Hennepin, a French

friar, gave to these falls the name of St. Anthony, in honor of his patron saint.

The falls in the main channel are several rods above those in the eastern, the great volume of water having worn away the soft, crumbling rock much faster. The falls are at present seven miles from the mouth of the Minnesota, at Fort Snelling. An early voyager represents the falls as having been sixty feet in height, but I have been able to find no point between Fort Snelling and the present fall, where the geological formation warrants this conclusion; they are now but seventeen feet in height. However, Professor Owen mentions the discovery of a bed of drift, eleven feet in thickness, overlaying the limestone at the falls, extending half a mile below and east of the gorge. This formation is such as to warrant the conclusion that a lake once existed here, and that its outlet was a fall, much higher than at present, at or near Fort Snelling.

Of course, little evidence can be given of the rate of wearing from actual observation, but judging from the strata, the retrocession must have been comparatively rapid, and after a lapse of time, this beautiful fall must be converted into a rapid.

The last dislodgment of rock in the bed of the falls, occurred on the 5th of July last, when a large mass, fifteen feet wide and a hundred feet long, gave way, removing the fall up the stream, on the Minneapolis side, fourteen feet.

WASHINGTON TERRITORY.

THE honored name of Washington has been given to the extreme northwest Territory of the American Union, which was separated from Oregon by an act of Congress in the year 1853. This is the solitary instance in which any one of the forty States or Territories of the United States has borne the name of an individual. Both the rule and the exception are equally good. From the harbors of Puget Sound—from the Straits of Juan de Fuca, and from the waters of the Columbia River is hereafter to go forth across the broad Pacific, a commerce and an intercourse which will diffuse the pure principles of that republicanism for which the patriot, the statesman, and the soldier, Washington, lived and labored; and it is becoming that the name of the Father of his country should be identified with the new State which is soon to bear so conspicuous a part in uniting the remote West of the new world with the remote East of the old.

The northern boundary of the Territory is the forty-ninth degree of latitude, from its eastern limit on the summit of the Rocky Mountains, to its intersection with the waters which pour from the Gulf of Georgia into the straits of Juan de Fuca. The bounds of the Territory then wind round the south end of Van-

conver's Island till the Straits of De Fuca meet the ocean. The Pacific bounds it on the west; on the south the Columbia River is its boundary as far as to its intersection with the Wallawalla River, west of which the latitude of forty-six degrees bounds it till it meets the Rocky Mountains.

The Territory of Washington, though the one most remote from the center of the Union, is destined to assume in a few years a prominence second to none on the Pacific, and in half a century to rank among the most powerful and populous of the confederacy. Uniting the best opportunities for an immense commerce, extensive manufactures, and great agricultural industry, nothing is needed for a rapid growth of the Territory but men and capital. The rapid increase of facilities for travel is continually diminishing this obstacle, which will practically cease whenever any one of the several routes for steam travel to the Pacific shall be completed. No part of the Pacific coast possesses anything like the opportunities for commerce that is possessed by this Territory. Beside its frontage on the Pacific, it enjoys the inestimable advantage of a multitude of safe harbors on the broad waters of the estuary which penetrates the country for more than two hundred miles. The Straits of De Fuca alone, according to Commodore Wilkes, are ninety-five miles in length and eleven broad. Connected with this strait are several spacious inlets known as Hood's Canal, Puget Sound, Admiralty Inlet, and the Archipelago of Arro. These were carefully surveyed by Wilkes, who pronounces them unsurpassed by any estuary in the world, and represents them as comprising very many fine harbors and safe anchorages, which are entirely free from danger. The country around these waters, he says, is remarkably salubrious, and offers every advantage for the accommodation of a vast commercial and military marine, with convenience for docks and many sites for towns and cities—easily supplied with water and surrounded with a back country rich in all the facilities for agricultural productions. Commodore Wilkes speaks with particular praise of the harbors and bays on the east side of Admiralty Inlet, ten of which he enumerates, which must eventually become places of considerable resort for vessels. The country between these waters and the Cascade Mountains may be cultivated into a garden-like fertility sufficient for a dense population. Nothing, he says, can exceed the beauty of these waters and their harbors. Spring tides rise eighteen feet, and neap tides twelve feet, affording every facility for the construction of dry docks—winters mild and of short duration, and harbors never obstructed by ice. Beside this, the Archipelago of Arro is represented as abounding in quarries of granite and sandstone, convenient of access and suitable for building. Another traveler expresses his belief that these waters will ultimately send out upon the ocean a greater number of able and skillful seamen than any other waters of equal extent in the entire world. The reason he assigns for this belief is the inexhaustible supply of good timber along the shores

of this great bay, and the unlimited amount of motive power which is furnished by the height of the tides. Of almost equal importance to the future prosperity of the Territory is the abundance of bituminous coal of proper quality for the use of steamers and for manufacturing purposes generally, which lies in the vicinity of these waters and is easily obtained.

The geological formation of the Territory is eminently favorable to the encouragement and development of manufactures. Although manufactures cannot, for many years to come, form a leading part of the industry of the country, yet its adaptation to this purpose must necessarily have considerable influence in inducing emigration to its soil. A map of Washington will show at a glance the extent of her resources in this respect. The serpentine course of the Columbia with its countless tributaries, extending from the Rocky Mountains on the east, to the most northerly limit of the Territory, and then crossing the country circuitously to its south limit, much of this long course being through a hilly, and in some cases a rocky country, affords mill-sites adequate to the supply of almost a continent. The Lewis River, the main tributary of the Columbia, furnishes a long line of water-power of great value and extent. The agricultural resources of the Territory being those which will first be brought into requisition are necessarily of primary importance. That part of the Territory lying between the Cascade range and the ocean is among the richest portions of the country. It is heavily timbered, and will need much labor to clear it for the plow. The fir, the spruce, and the cedar, some of them of immense size, abound in exhaustless quantities. No part of the Union equals this Territory in its supply of spars and other materials for ship-building.

Between the Cascade range and the Rocky Mountains lies four-fifths of the whole territory. This portion of the country is admirably adapted to grazing purposes. The grass and the water are unsurpassed—the climate is sufficiently mild to allow of winter exposure of cattle. Horses, horned cattle, and especially sheep can be raised in vast numbers under every advantage of soil and climate. In the natural elements of public prosperity, no State or Territory exceeds, and but few equal this youthful sister in the family of States. Fifty years ago Ohio, like Washington to-day, was the distant west, with here and there a feeble settlement of adventurous whites, surrounded by large and powerful tribes of Indians. In half a century, although in '54 containing less than four thousand souls, the latter will exhibit a population of millions of enterprising whites, as the facilities of travel and the access to the great markets of the world are immeasurably superior to what they were when Ohio was settled. At present the country is largely filled up with the aborigines, the most considerable of whom are the Nez Perces in the southeast, the Flatheads in the north, and the Wallawallahs in the south. Of the smaller tribes, there are not less than twenty-seven on and around Puget Sound,

varying in number from twenty-five or thirty to eight hundred, or more. Between the waters of the Columbia River and Puget Sound, there are but two tribes, numbering less than five hundred in all. West of the Cascade range the total number of Indians of every variety is supposed not greatly to exceed six thousand souls. The character of all these Indians is similar, as a general thing. They depend for subsistence chiefly upon fish, berries and roots. The rivers of Washington abound with the former. The waters of the Columbia; the streams which pour into the Sound and the Pacific; the inlets between Vancouver's Island and the main, and even the shoals outside of the ocean banks swarm with cod, halibut, and other fish of great value. These the Indians take in great numbers, exchanging the surplus beyond their own wants with the vessels which trade on the coast or with the settlers on Vancouver's Island and elsewhere in the neighborhood. These savages differ somewhat in their natural characteristics from those formerly inhabiting the Atlantic coast. The missionaries who have sought to introduce Christianity among them, represent them as generally indolent and selfish; as destitute of gratitude or affection, but as strongly inclined to imitate the whites in dress, manners, and modes of life. This latter trait furnishes some ground of hope that, under more favorable circumstances, and when the influence of permanent white settlements shall have taken the place of the pernicious influence of vagrant hunters and trappers, and interested traders, they may ultimately be made better rather than worse by their intercourse with whites. Esculent roots and berries serve them as an agreeable change in food, and are found in exhaustless quantities in the forests and on the plains. They spend their lives either floating about in their canoes or wandering in search of berries wherever they are most abundant. The climate is mild and healthy—a blanket and shirt being all the clothing they need to make them comfortable for a year. They are extravagantly fond of gambling, often carrying it to such excess as to part with their wives and slaves, their fish-spears and shirts. Slavery exists among them, and slaves taken in war from neighboring tribes constitute a principal part of their wealth. They are a cowardly people and only fight in a last extremity, when their cupidity is greatly excited or necessity in some way is laid upon them. When they want a thing, they will whine and beg for it; if still unsuccessful, they are willing to work for it, but if this also proves unavailing, they will fight for it. Much of their cowardice may be explained by the kind of food upon which they subsist. Their passion for ardent spirits is intense; and this great curse of the Indian race is furnished them in abundance by traders, over whom the agents of the government appear to exercise no very efficient control.

NEBRASKA.

IN the remote West—so remote that a few years ago much of it was characterized in the maps of the United States as the great unexplored American Desert—lies a country that has suddenly shot up into great social and political prominence. The Territory of Nebraska—extending from the British Possessions on the North to Texas on the South; from the western limits of Arkansas, Missouri, and Iowa on the East to the eastern boundaries of New Mexico, Utah, and Oregon on the West—contains an area of four hundred and eighty-five thousand square miles. From this vast surface, in which sixty-two States of the size of Massachusetts might lay side by side, two Territories, ultimately to become States, have been formed, in which the institutions, the education, the morals, and the habits of republican freemen are being introduced. Heretofore reserved as the hunting-grounds and the homes of our aboriginal tribes—some of them hereditary denizens of the soil, and some the expelled bands from soil earlier coveted by the whites—the country has been until lately legally shut up from the covetousness of the latter. Yet a few of that peculiar people, whose instinct for solitude, or whose more calculating dread of the ministers of the law, has made pioneers of the wilderness, had penetrated the outskirts of the country, to the number of nearly a thousand persons. In 1853, there was one white individual to every four hundred and eighty-five miles of territory. The first session of the Congress of 1854 will be memorable in the history of the country as the time when the formation, from this last home of the Indians, of two great Territories, agitated the North and the South on the ever perplexing question of the admission of slavery into their boundaries.

The Territory of Nebraska is bounded on the north by the British Possessions, on the south by Kansas, on the east by the Missouri River, and on the west by the summits of the Rocky Mountains; embracing within these boundaries three hundred and thirty-five thousand eight hundred and eighty-two square miles. The extension of territorial institutions over this vast country leaves but a trifling portion of the soil, once all their own, to the remnant of the ill-fated aborigines. Between the north boundary of Arkansas and the south boundary of Kansas is now the only portion of the great Union over which the civil institutions of the whites have not been extended. How long the cupidity of Christian America will restrain its powerful grasp from seizing this final memorial of the race whom we have supplanted, may not unreasonably be conjectured from our past policy. Until a territorial organization is effected, the entrance of every white into its boundary is a misdemeanor, exposing the intruder to summary ejectment and punishment. In spite, however, of this prohibition, some few have ventured in; and it requires no great foresight to see that the impunity of these few will serve as sufficient warrant for

the many who have heretofore been restrained by fear of the power of the government.

The condition of the eighteen or twenty tribes of Indians now inhabitants of the country included in the Territories of Nebraska and Kansas, is a peculiar one. They are not civilized in the sense that even the wildest of white pioneers are civilized. Some of them indeed may have as sound laws, as fixed residences, and as regular avocations as the latter; but still they are Indians. In spite of their churches, school-houses, agricultural implements, and other appliances of civilization, they retain, to a great extent, the nature, the traditions, the impulses, and the feelings of Indians. The efforts of benevolence, public and private, have done much to redeem them from the reproach of barbarism, and to surround them with the comforts and intelligence of civilized life. Some of them these efforts have Christianized; most of them have become lost to paganism, but few of them are Christians in the highest sense. They still need instructions and guidance, even as children need them. Their civilization is an imparted, and not a native one. More than one generation will elapse before this can be changed. Of these tribes, most of them are not native to the spot they now occupy. They were brought there for the convenience and profit of the whites, and under pledges that their rights should be respected, and they themselves be protected from all incursions from the whites in their pursuit of an orderly livelihood. But the policy of the government has heretofore been to use its powerful influences, none the less effectual because sometimes indirectly employed, in compelling the Indians to cede whatever the intruding whites may need. The aborigines are aware of this; they say there is no resting-place for them under the existing order of things; and this knowledge has produced most unhappy effects upon them. Many of them say, when urged to turn their attention to agriculture or mechanical pursuits: "What use will agricultural or mechanical arts be to us on the Rocky Mountains, or on the distant hunting-grounds." This is represented to be the prevailing feeling among a large portion of these Indians, and will account for the slow, very slow progress they have made toward civilization. To meet this critical condition of things, some plan must be adopted which, while beneficent to the Indians, will not prove a hopeless contest with the inevitable mark of white civilization and settlement. One of the ablest and most experienced of the Indian agents of the government in Nebraska, has ably advocated the project of endowing such as wish it, with the rights of American citizenship. A large part of the now orderly Indians would gladly avail themselves of the privilege. Those who are not sufficiently enlightened to appreciate the advantages thus afforded, might be colonized on the western border of Nebraska Territory where, by judicious management, they would gradually improve, and the next generation would probably avail themselves gladly of the boon they had once rejected. However much we may shirk the consideration

of the subject, but two alternatives seem to remain to the government—one is to make citizens of the Indians as fast as they desire it, and show that desire by settling down to regular industry, or to drive them back into the Rocky Mountains, and leave them to be destroyed by intestine wars, by cheap whisky, and the small-pox, and other diseases dangerous to whites, but always desolating to Indians.

We have already pursued substantially the same course with that here recommended, by treaty stipulations with Mexico, receiving as citizens the entire population of New Mexico, much the larger portion of whom are of pure Indian blood. The adoption of such a policy would remove the opprobrium under which the government rests, of having impoverished and ruined the original owners of the soil, while enriching itself. A continuance of the past policy of the government, with its mournful results now apparent to all, can neither be justified in the sight of God nor man. The efforts of Christian missions alone are not adequate to the civilization of the race. Even our own boasted civilization, impregnated as it is with the manifold influences of Christianity for many centuries, would scarcely hold its own were our material condition and prospects as unsettled and unfavorable as theirs. The great element in the progress of any society of men is the clear and distinct prospect of bettering the condition of all its members by well ordered industry, and by the habits of Christian morality. This stimulus to exertion the whites have, and the Indians have not. To-day they find themselves settled along the branches of the Missouri, because the convenience of the whites permits it. Ten years hence they foresee that the same convenience of their powerful masters may force them back into the wilds of the Rocky Mountains, five hundred miles further. They think they foresee the time when their children will have no foothold they can call their own on the broad continent which was once wholly theirs. The discovery of gold in California, and the rapid settlement of the Pacific coast, have done the Indians of Nebraska an immense injury. Heretofore the buffalo of the remote prairie was their well stocked cattle pen, to which they could always resort for food; the countless game of the forest was their unfailing poultry yard; and the green grass that lined the numberless watercourses was their exhaustless pasture. But the countless trains that continually pass and repass from the Missouri to the Pacific, have made sad havoc upon these prime necessities of a nomadic life. The grass has been eaten up, the game killed, and the buffalo destroyed or driven away, leaving the Indians little or nothing upon which to subsist. Fatal as cholera and small-pox are to the aborigines, those most familiar with their mode of life, say that actual starvation has caused a greater mortality among them than both these diseases combined. A prevalent idea exists, that the hostilities which occur between bands of emigrants and tribes of wild Indians are wholly owing to the lawless habits of the latter. The reverse is

commonly the case. Vagabond whites are quite as lawless as vagabond Indians. Many of the former are more desperate and commit more depredations than the Indians. The circumstances of the case, indeed, are sufficient to show that the tribes have few or no inducements to commence such aggressions. The whites, they know, are their superiors in courage, in resources, and even in craft. Should they succeed, now and then, in overpowering a weak train of emigrants, they know that a bloody expiation will be exacted, and that the whole force of the government would be used, if necessary, to inflict deserved chastisement upon them. For this reason they submit, though with many murmurs, to the destruction of their means of subsistence, and bear many provoking aggressions before they seek redress by a bloody retaliation. But their case, in every aspect, is a hard one. The policy of the government might answer for the past, but when the settlement of the entire country, by the natural increase of population and by emigration, is foreseen to be an unavoidable fact soon to be accomplished, natural justice, to say nothing of Christian benevolence, demands a radical change in the policy which has heretofore been pursued, and which has neither made them good Christians nor contented Indians.

The number of these Indians of all tribes has been very variously estimated from twelve thousand up to thirty thousand, and even more. The Cherokees, the Osages, Wyandottes, Pottawatomies, Ottawas, Chippewas, Shawanese and Delawares are among the most civilized and promising of the race. Under all the disadvantages of their position, neither whites nor savages having laid aside their barbaric habits without having been recognized as a civilized people, they yet have accomplished wonders in their progress in agriculture, in education, and in good morals. A judicious policy on the part of the government is all that is needed to complete what is so auspiciously begun.

In regard to the physical character of the country, a recent writer, who speaks from personal observation, says the valley of the territory westward from the Missouri is a rich loam. The Valley of the Platte, nearer the northern boundary, is low, but for some two hundred and fifty miles is very fertile, when it changes into a deep sand. The two great ridges between the Arkansas and Kansas and the Kansas and Platte are a mixed loam and sand, or gravel, which makes a delightful soil to till, and returns heavy crops. The ridge between the Kansas and Platte is more beautiful and fertile than the other. The valleys are tolerably supplied with timber. There is also some timber along the Missouri River, and a slight growth is found along the small streams. Coal has been found of a superior quality at several locations, and there are indications that an abundant supply will be found for the whole territory.

The Osage orange is indigenous to the southern part of the country, and can be cultivated with the greatest ease in all the

territory; so much so, that with tolerable attention, three years will produce hedges sufficient to turn any stock. The want of timber for fencing is thus readily supplied to the prairie land, and the expense of clearing timbered land, fencing and bringing it into cultivation, far exceeds the trouble, time and labor of producing the finest hedged farm in the prairie districts.

The want of lumber will also lead to the erection of brick, stone and even beautiful freestone houses, as these materials can be abundantly obtained in various localities. Such is the nature of the country for some three hundred miles west; then there are fertile ridges and fine rich prairies scattered over a country in some places almost barren.

In addition to what is given in the preceding pages upon these new territories, we annex from a published source, some further facts upon their natural capabilities and prospective condition, which are derived on the part of the writer from personal observation, and diligent inquiries of traders and trappers, during a long period of familiar intercourse with them.

“The face of the country of Nebraska, from the Missouri River westward to the spurs of the mountains, is rolling prairie, but little diversified in its aspect save by the intersection of its streams. The soil, for a space varying from fifty to one hundred miles west of the Missouri River, and the State line, is nearly identical with that of Iowa and Missouri. The highlands are open prairies, covered with grasses; the river bottom a deep, rich loam shaded by dense forests. From this first district to about the mouth of *L'Eau qui Court* (Running Water River), it is one boundless expanse of rolling prairie, so largely intermixed with sand as to be almost unfit for ordinary agricultural purposes. The prairies are, however, carpeted with succulent grasses, affording an inexhaustible supply for herds of cattle and sheep.

The third district is a formation of marl and earthy limestone, and extends in a belt of many miles east and west of the Mandan Village, on the most northern bend of the Missouri River, and southward across the southern boundary of the Territory. This soil cannot be otherwise than very productive, and especially adapted to wheat, rye, barley, and oats; very fine Indian corn is also seen along the upper valleys of the Missouri River. It is in this district that what are called *buttes* by the Canadian French, and *cerros* by the Spaniards, are profusely scattered. Here and there the traveler finds surfaces, varying in diameter from a hundred feet to a mile, elevated from fifteen to fifty feet above the surrounding surface. They are not hills or knobs, the sides of which are more or less steep and covered with grass. Their sides are nearly perpendicular, their surfaces flat, and often covered with mountain cherries and other shrubs. They have the appearance of having been suddenly elevated above the surrounding surface by some specific cause. This marl and limestone formation is, in many localities, worked into fantastic or picturesque forms by the

action of the elements. In one place, especially, called by the traders *La Mauvaise Terre* (the bad ground), and about thirty miles in diameter, it has assumed a marvelous variety of singular forms.

The district which we will call the fourth, lying north of the Missouri River and west of Minnesota, is a succession of undulating plains, the soil of which is quite fertile but rather dry. These plains are covered with a thick, grassy sward, which sustains innumerable herds of bison, elk, and deer.

The fifth district is at the base of the Black Hills, between that range and the Rocky Mountains, and includes the Valley of the Yellow Stone, of the Maria's River, and a variety of other small valleys, circumvallated by an amphitheater of mountains and gorgeous mountain scenery. The Valley of the Yellow Stone is spacious, fertile, and salubrious. The streams are fringed with trees, from whence the valley expands many miles to the mountains. The traveler can almost imagine himself upon the Danube, for the valley is sprinkled over at long intervals with cyclopean structures of granite closely assimilated in appearance, from a distant view, to the stern and solitary castles with which Europe was covered and guarded during the middle ages. But these structures exceed those of Europe in magnitude and grandeur, and the woods and waters are disposed with a taste and beauty which the highest art must ever toil after in vain. It is encircled by a rich girdle of heights and mountains, the bases and dark sides of which are obscured in shrubs, and the summits tufted with noble forest trees. And here is to be the seat of a populous and powerful community in the far future.

The Missouri River was ascended by Lewis and Clarke, in canoes, a distance of three thousand miles. It has been navigated by steamboats to the foot of the Great Falls, two thousand five hundred miles. From the point where the Nodoway (a Missouri stream) enters it upward, the northern bluffs recede, leaving a broad, open, rolling plain. On the south bank the highlands skirt the stream closely. Above Council Bluffs, opposite Kaneshville, Iowa, the bluffs on both sides recede, and there is little or no timber, save only bunches of cottonwood. From the mouth of Jacques River, the river valley continues to become narrower to the base of the mountains. The river valley is the only rich alluvion—the highlands being intermixed with sand largely, and unfit for agriculture, except in the third district, already described. Down as low as the Mandan Village, the water is as clear as the Ohio. From thence onward to its mouth, it is impregnated by its tributaries with marl and sand, and always looks as muddy as if in a freshet.

The spring freshet usually occurs about the 1st of June. Except during this freshet, the ascent above Council Bluffs, by boats of fifty tons, is arduous and difficult, and its descent by such boats nearly impossible, on account of the number and shifting charac-

ter of the bars. There is a difference of seven degrees in the specific gravity of the waters of the Missouri at the mouth of the Kansas River and the waters of the latter stream. The former has many more tributaries running through marl and quicksand. The average rapidity of the waters of the Missouri is nearly twice that of the Upper Mississippi. The Orinoco only exceeds it in velocity. The Missouri on the forty-first parallel, is more than five hundred feet above the Mississippi on the same line.

After leaving the Great Falls, the tributaries of the Missouri are not numerous, and none of them, above Council Bluffs, are navigable for anything but canoes. The large space intervening between it and the Great Platte (or Nebraska), is destitute of streams, and nearly so of springs. Hence the grass on the larger portion of this immense tract becomes withered and stunted very early in the season. Its chief tributaries are the Platte, the Sioux, the Jacques, the L'Eau qui Court, the White, the Hart, and the Yellow Stone.

The Platte rises near the fortieth degree of latitude, and longitude one hundred and six degrees, in the Rocky Mountains, and flows thence northward and eastward to its outlet, receiving the South Fork in latitude forty-one degrees and longitude one hundred degrees. At the junction of the two forks the river is over five thousand feet in width, and thence onward varies from one to two miles in width. It is so shallow and so capricious, in consequence of its quicksands, that it may be considered as almost useless for purposes of commerce. Were its waters confined to a channel of a thousand feet in width, it would be one of the noblest streams in the world; but this may be considered impossible. The valley is from eight to fifteen and twenty miles in width. It is generally a dead flat, elevated only from eighteen to twenty-six inches above the surface of the stream, and the greater portion liable to inundation. It is entirely destitute of timber, but produces a luxuriant growth of the richest grapes.

The Yellow Stone has its sources in the Rocky Mountains, but their exact location has never been discovered. It flows northeastwardly to its mouth. It has been navigated for eighty miles by steamboats, and may be rendered usefully available for other craft two hundred and fifty miles; its valley is the garden spot of Nebraska. It is finely timbered and watered. In the future, commercial intercourse will be carried on between this valley and that of Clarke's branch of the Columbia. General Clarke found a fine wagon-road connecting them in 1806, and Major Stephens has recently discovered an open gap through the Rocky Mountains. These two valleys embracing the sources of the two greatest rivers on the continent, which will bear their products to the two greatest oceans in the world, surrounded by other smaller but no less rich ones, will be the future Switzerland of America.

The climate of Nebraska has not been accurately described.

Enough is known, however, for practical purposes. Vegetation in Iowa is some weeks later than in Missouri. In Eastern Nebraska it is some weeks later than in Iowa, and in the vicinity of the mountains some weeks later still. From the city of St. Louis, traveling either northward or westward, the climate becomes colder about in the same degree—the difference of elevation, traveling west, being about equivalent in its effects to the difference of latitude traveling north. Snow falls at the foot of the mountains about the 1st of September, and at Council Bluffs about the 1st of November.

Coal has been found in the northwestern counties of Missouri, and, it is probable may be found in the southeast portion of Nebraska. The limestone formation of Missouri and Iowa extends over the first district of Nebraska described in this letter. Beyond that district the formation is sandstone and rocks of the diluvian period—the former south and west of the Missouri chiefly, and the latter north of it.

The first district is the only really good agricultural region at present. It is a rich loam, finely timbered and watered. The second is strictly pastoral. The third has soil, but is destitute of timber and very sparsely supplied with springs. The fourth also has soil, but has the same drawbacks. The fifth, as already stated, is the finest region on the globe in the same latitude.

A few of the farming boys of Iowa and Missouri have heretofore “stuck their stakes” in the first district, opposite Kaneshville, and above the mouth of Platte River. Emigrants are now pouring in by the thousand, and scarce a year can elapse before they will have appropriated all the good land along the Missouri River. Here the progress of the Territory will be checked for many years to come, and when it again commences the emigrants will leap over the second district, but leave occasional squatters along the line of the Missouri to the third one—but they will not pause here long. There is not enough timber and water. In thirty years there will be two distinct communities in Nebraska, the one occupying the country directly west of Iowa, and the other the Valley of the Yellow Stone.

The surveyed counties of Nebraska are Richardson, Pawnee, Nemaha, Johnson, Otoe, Cass, Sarpy, Douglas, Washington, Bent, etc. The principal towns are:

Brownsville, the county seat of Nemaha county, is situated on a bench of land forty feet above the river bottom. It has a fine landing, does quite a large business, and has mail routes to Nebraska City and Fort Kearney. The Nebraska Advertiser is published here, and Brownville College will go into operation very soon. *Nemaha City*, *Mount Vernon*, and *St. George*, in this county, are all thriving towns. Nebraska City is a thriving, active town of 1,200 inhabitants, situated in Otoe county, on the Missouri; the buildings are generally of wood, though a fine block of brick buildings has just been completed, and several others are

being built. Bordering Nebraska City is Kearney City, a small town on the site of old Fort Kearney. The fort is a mere block-house built of square logs, and has been abandoned. Nebraska City is the largest town north of the Platte, and will probably become one of the most important towns of the Territory. The *Nebraska News* is published here. Plattsmouth is a town of about five hundred inhabitants, does a large business, and lays claim to being the western terminus of the Burlington and Missouri Railroad.

Bellevue is beautifully situated on the table-lands of the Missouri. This place was selected, many years ago, as a mission station by the Presbyterians, and the fur company made this one of their posts. There are a number of handsome houses in Bellevue, two fine hotels, and another large one is being built. The *Bellevue Gazette* is published here.

Omaha City is beautifully situated on a wide plateau, the second bottom of the Missouri River. Back of it rise the bluffs by gentle slopes, from the summits of which the great prairies of the interior roll in beautiful undulations. From the first of these may be seen the grandest view the eye of man ever looked upon. Up and down the river on the Nebraska side run, as far as the eye can reach, the table-lands, so smooth, so unbroken, so perfect, the hand of art could not add to or take from one part of it. Beyond is the river, bordered by heavy trees, with its broad shallows and turbid current, floating with serpentine windings. On the opposite side is the broad bottom of the river, and cutting short the view, rise the bold rugged bluffs of Iowa; the tracery of their forests standing out in the clear atmosphere, with the strongest distinctness, while Council Bluffs lies ensconced within an opening, a busy mart of all that region.

Omaha City is well built up with substantial brick blocks. It numbers eighteen hundred people, and is the capital of the Territory. The United States have commenced building a capitol, which is situated on a handsome and commanding hill in the west of the town. The building is a parallelogram in form, with heavy columns upon each side. The ornaments, which are elaborate, are of iron, as are also the casings of the pillars and the caps of the windows. Fifty thousand dollars have been expended in laying the foundations and carrying it up one story. A like sum has been appropriated by Congress to complete it.

Handsome churches have been built by the Methodists and Congregationalists, in both of which are settled clergymen. The Baptists also have a clergyman here. An Episcopal church has been organized, and service is regularly held on Sunday by a clergyman. A handsome church is to be erected by the Episcopalians the coming summer, at an expense of \$7,000. The Roman Catholics also have a church here.

Florence lies about six miles above Omaha City. *Saratoga* lies between these two places, and on the same plateau with them.

Omaha lies southeast of Omaha City, it has been laid out only a few months, and is quite a small town.

Fontenelle, the county seat of Dodge county, is handsomely located on the east bank of the Elkhorn, and is the largest inland town in the Territory.

KANSAS.

THE Territory of Kansas extends from the thirty-seventh degree of north latitude to forty degrees north, and from the west boundary of Missouri to the crest of the Rocky Mountains. Area 122,000 square miles. A few years ago this territory was unexplored, and laid down on the maps as the Great American Desert. When California became part of the dominions of the United States, and gold was found in the beds of her rivers and the bosom of her soil, thousands flocked thither from all parts of the country.

Thousands reached the goal of their hopes by a long passage around the Horn; some by a slow, vexations crossing of the Isthmus; but thousands more took the overland route from the Missouri to the Pacific. This newly-opened highway led directly through the Indian Territory, known as the "Great American Desert;" and many a one, looking upon its unrivaled and ever-varying scenes of beauty, as his route for days lay over its beautiful rolling prairies, decked with the loveliest flowers in every shade of coloring, or canopied under the noble trees by the bank of some clear swiftly-flowing stream, felt strong desires for a home where he could sit under his own vine and fig tree in a land like this; and many resolved to find here such a home when the land should be thrown open to settlement.

The face of the country is exceedingly beautiful. The broad expansive prairies, stretching away as far as the eye can reach, are gently undulating or abruptly rolling, and consequently are never lonely and wearisome; and at the ascent of each new prominence, new scenes of beauty and loveliness greet the eye. Running through the entire length of the country, usually at some distance from the rivers, are high bluffs, while ravines run from these to the rivers. At some points, these ravines are quite deep, and as the prairie grass is as high as a person's head, the traveler, who is unacquainted with the country, finds them exceedingly vexatious, and difficult to cross. These ravines, with their tall, graceful cottonwood, black walnut, hickory, oak, elm and linwood trees standing on the margin, while springs of pure, clear, cold water gush from the rocks, present pictures of beauty and loveliness unparalleled. These bluffs are a formation unknown elsewhere, and when seen at a distance, the traveler can scarcely realize that art had not added her finishing touches to a work which nature has made singularly beautiful.

Front Street, Leavenworth City.

Old Elm, Leavenworth City.

State-House, Leecompton.

Shawnee Mission.

Lawrence.

The above Views in KANSAS, were taken for this work in May, 1856. The large building, in the central part of the engraving of Lawrence, is the Free State Hotel, which was destroyed the week after this view was drawn. Near the river bank is seen a breastwork, which had been erected for defense by the citizens.

Entered, according to Act of Congress, in the year 1856, by HENRY HOWE, in the Clerk's Office of the District Court of the United States, for the Southern District of Ohio.

the many who have heretofore been restrained by fear of the power of the government.

The condition of the eighteen or twenty tribes of Indians now inhabitants of the country included in the Territories of Nebraska and Kansas, is a peculiar one. They are not civilized in the sense that even the wildest of white pioneers are civilized. Some of them indeed may have as sound laws, as fixed residences, and as regular avocations as the latter; but still they are Indians. In spite of their churches, school-houses, agricultural implements, and other appliances of civilization, they retain, to a great extent, the nature, the traditions, the impulses, and the feelings of Indians. The efforts of benevolence, public and private, have done much to redeem them from the reproach of barbarism, and to surround them with the comforts and intelligence of civilized life. Some of them these efforts have Christianized; most of them have become lost to paganism, but few of them are Christians in the highest sense. They still need instructions and guidance, even as children need them. Their civilization is an imparted, and not a native one. More than one generation will elapse before this can be changed. Of these tribes, most of them are not native to the spot they now occupy. They were brought there for the convenience and profit of the whites, and under pledges that their rights should be respected, and they themselves be protected from all incursions from the whites in their pursuit of an orderly livelihood. But the policy of the government has heretofore been to use its powerful influences, none the less effectual because sometimes indirectly employed, in compelling the Indians to cede whatever the intruding whites may need. The aborigines are aware of this; they say there is no resting-place for them under the existing order of things; and this knowledge has produced most unhappy effects upon them. Many of them say, when urged to turn their attention to agriculture or mechanical pursuits: "What use will agricultural or mechanical arts be to us on the Rocky Mountains, or on the distant hunting-grounds." This is represented to be the prevailing feeling among a large portion of these Indians, and will account for the slow, very slow progress they have made toward civilization. To meet this critical condition of things, some plan must be adopted which, while beneficent to the Indians, will not prove a hopeless contest with the inevitable mark of white civilization and settlement. One of the ablest and most experienced of the Indian agents of the government in Nebraska, has ably advocated the project of endowing such as wish it, with the rights of American citizenship. A large part of the now orderly Indians would gladly avail themselves of the privilege. Those who are not sufficiently enlightened to appreciate the advantages thus afforded, might be colonized on the western border of Nebraska Territory where, by judicious management, they would gradually improve, and the next generation would probably avail themselves gladly of the boon they had once rejected. However much we may shirk the consideration

The climate of Kansas is exceedingly lovely. With a clear, dry atmosphere, and gentle, health-giving breezes, it cannot be otherwise. The peculiar clearness of the atmosphere cannot be imagined by a non-resident. For miles here a person can clearly distinguish objects, which, at the same distance in any other part of this country, he could not see at all. The summers are long, and winters short.

“The winters are usually very mild and open, with little snow—none falling in the night save what the morrow’s sun will quickly cause to disappear. So mild are they, that the cattle of the Indians, as those of the settlers of Western Missouri, feed the entire year in the prairies and river-bottoms. The Indians say, that once in about seven years Kansas sees a cold and severe winter, with snows of a foot in depth. Two weeks of cold weather is called a severe winter. Then the spring-like weather comes in February; the earth begins to grow warm, and her fertile bosom ready to receive the care of the husbandman.

“The winds of March and April are the most disagreeable outdoor arrangements in Kansas. It were quite useless for a person of little gravity or strength to attempt much progress in locomotion, when from out the halls of Æolus the winds have rushed untrammelled and unrestrained. The breezes of summer, however, are most delightful. With the sun, the wind rises, and makes such a difference in the actual effect of the temperature on one’s senses, as to lead to doubts as to the correctness of thermometers in this country. The mornings and evenings are always cool and pleasant, and one experiences nothing here of those summer nights, so common even in New England, where between weariness occasioned by intense heat and mosquitoes no refreshing sleep will come. Very seldom are there nights in Kansas that blankets are not found an essential comfort. The rains are frequent and copious. So far as my own experience goes, we have no more of a wet or dry season than in Massachusetts. Seldom a week passes in the summer without rain, often coming in most gentle showers in the night, unaccompanied by thunder and lightning; while early in the spring especially, there is such a display of electricity as one seldom sees. The whole heavens will be one perfect sea of flame, and thunder deafening in the continual roar, while the waters fall so abundantly, that they run in all directions, after the earth has filled its pores, like a miniature deluge. There is a sublimity, an awe-inspiring influence in such displays of grandeur and power, as make the creature feel his nothingness, and that the Creator is indeed all—the great All-Father, All-wise, All-good, All-powerful. Days, like September days in New England, linger here until the old year has given place to the new; and the last of December has the genial breath, the pleasant sun, and glad look of early autumn. But the changes of weather come suddenly. One may be dreaming all the morning, influenced by the pleasant temperature around him, of the fair Italian land, and

ere the sun finds its setting, may fancy himself nearing the pole. Yet in all these changes no one takes cold. There is something so invigorating in the atmosphere, so bracing, and the lungs have such play and action in it, that vigor is increased where health was before enjoyed; and in many a case where the pulse was faint and low, and the invalid looked out upon life with little purpose and few aims, feeling that its limits were nearly reached, the roses of health have again bloomed, and the life-blood coursed joyously. For consumptives there can be no better country than this. In many instances, most material has been the change, and permanent the cure."

Towns, Forts, Settlements, and Missions—Lawrence.—The site of this town was selected by Mr. C. H. Branscomb, and the first settlement made here in August, 1854. In September, another party of emigrants from the New England States arrived and settled here.

The town is situated on the banks of the river whose opposite shore is skirted by a line of beautiful trees, while beyond lie the Delaware lands which, in the distance, have all the appearance of cultivated fields, gardens, and orchards, and form a background to the picture of singular loveliness. The prairie stretches far off to the eastward of the town for eight or ten miles, and one can scarcely help believing that the ocean lies beyond the low range of hills which bound the prospect. The line of travel from Kansas City, or the east, passes into the Territory by this way. To the southeast rises Blue Mound, and with the shadows resting upon its fresh green foliage, it has a soft, velvety beauty which no language can describe. The course of the Wakarusa River is marked by a line of timber, while beyond, the eye rests upon a country diversified in surface—sloping hills, finely rolling prairies, and heavily timbered creeks. A short distance, rises Mount Oread, over the top of which passes the great California road. On the west also is a high hill, while to the northwest, as far as the eye can reach, there is a delightful mingling together of hill, valley, prairie, woodland, and river; the humble dwelling of the pioneer giving to the whole a cultivated and home-like appearance.

Fort Leavenworth.—The location of Fort Leavenworth is one of the finest on the Missouri River—the buildings stand upon a high rocky bluff, which extends to the river, and forms an excellent landing. Here government has reserved a tract three miles square for the purpose of a fort, and the fine government farms, with their carpet of green English grass, contrast beautifully with the brown covering of the prairies.

This would be a very fine location for a city, if it could be obtained, but as this military post has become very important as a means of forwarding supplies, both of provisions and men to forts farther west, government will probably not yield it for many years to come.

Leavenworth City.—Immediately adjoining the land of Fort

Leavenworth, on the south, and as close to that military reserve as it could be placed, is located Leavenworth City. The location is somewhat unfortunate on account of the island in front, and the bar at the upper point of it; but one object in selecting that point was to get as near to the fort as possible, in order to enjoy the trade from the soldiers stationed there—an important item to a new town, but not worth much after it has once got a start.

Many persons are led to over-estimate the location, supposing that the supplies and military stores for the fort must be purchased at the nearest city. But this is a mistake. These are all supplied by contracts. Government receives bids for, and awards them, and parties in St. Louis or Washington City stand just as good a chance, if not a better one, to get the contract of supplying Fort Leavenworth as those resident there.

Everything is thus supplied to the soldier, except his grog. This he goes to Leavenworth City to buy; and, then swaggering through the streets, contributes thus to the prosperity and business air of the place.

Leavenworth City is badly laid out, with narrow streets and small lots, and the levee is not much over sixty feet wide. It was proposed some time ago to the City Council to buy the first block of lots adjoining the river, clear them off and make a levee. An estimate was made that the entire front of the city could be bought at that time for \$20,000, but the proposition fell through, because some timid citizens feared the next ice freshet might fill up the channel at the head of the bar, and throw the stream around on the other side of the island, in which case the city would never be able to pay the money.

In regard to railroad advantages, Leavenworth City is forty miles south of the terminus of the Hannibal and St. Joseph road, and forty miles north of that of the Pacific road. Any road coming there must be a branch from one of these, but no main, direct route seems likely to reach it.

Immediately around Leavenworth the surface is very much broken, and the road from there to Lawrence is over high rolling ground, following no valley, but crossing all the streams and gulleys diagonally. A railroad is projected from here to Lawrence, and on up the Valley of the Kansas to Manhattan and Fort Riley, but the grading from Leavenworth to Lawrence would be very expensive. The population of Leavenworth is probably about one thousand five hundred.

Kansas City, heretofore regarded as the rival of Leavenworth City, is situated on a fine rocky bluff, rather high and requiring heavy grading, but the elevation makes it very conspicuous and gives it a very imposing appearance as you approach it from up or down the river. The city is upon the very extremity of the bluff. From here to the mouth of the Kansas is a broad bottom of nearly two miles. Strange as it may seem, this bottom, or one square mile of it, is a military reservation, selected at an early day by

Governor Clarke (of Lewis and Clarke), but from its unfitness, has never been used for that purpose.

The landing at Kansas City is now good—the channel sweeping directly against the bluff—but the river here is very wide (over a mile), and little sand islands are continually formed in it, and the channel frequently changes. On the opposite side of the river is a low bottom, and apprehensions have been felt lest the river might straighten itself at that point by cutting a new channel.

Kansas City has long enjoyed the Santa Fe trade, which is of some importance, and is the proposed terminus of the railroad from St. Louis. It contains a population of about eight hundred,

Wyandotte City lies directly at the junction of the Kansas and Missouri Rivers. Next to the Missouri is a low bottom near a quarter of a mile wide; back of this are gently swelling hills, but no gulley or excavation through them has as yet shown any rock. The formation is entirely alluvial. The Kansas River here is only seventy-five yards wide and quite deep, and it is thought would furnish a landing even if the channel of the Missouri should change; but boats would find a difficulty in turning in it, for it continues narrow some distance up.

The Surveyor General's office was located here until its removal to Lecompton last fall. There are only eight or ten houses in the place. The Indians still own some interest in it and none of its proprietors have exhibited much enterprise. They seem to think that because it is exactly at the mouth of the Kaw, it must become a great city, and no effort on their part is necessary.

Its gentle hills are quite picturesque, and the site would be a good one for a town, if the landing could be depended upon.

Quindaro, on the Missouri River, was located by Governor Robinson and his associates on lands purchased of the *Wyandotte* Indians, and first settled in 1857. Its great advantage is supposed to be its landing. The river is narrower here than at almost any other point, and the rocky bluffs come nearer together. The channel has run directly against the bluff on which the town is located, ever since the river has been navigated by steamboats.

Just above the northern point, on the Missouri side of the river, lies *Parkville*—also on a bluff. *Quindaro*, like *Kansas City*, is located on the extreme end of a bluff, and all the land lying between the two cities is bottom, without any reliable landing, and without any security from washing away.

The rock at *Quindaro* is limestone, and though the bluff is high, it is only a narrow ridge—in some places not over fifty feet on top—and back of this the rock rises gradually for a mile. A little creek breaks through this ridge near the center of the town plat. This descends from the high ground by a very gentle inclination, and up this the principal street is laid.

Quindaro is much better laid out than any other Missouri River town. Many of its streets are a hundred feet wide, and none less than eighty, and a broad levee runs the entire length of the town

VIEW IN SALT LAKE CITY.

"The building on the right is the residence of Brigham Young— that on the left, with flag-staff near it, is the Bowery, which is used as a theater and for holding public meetings, in the distance is the Mint."

(one mile). It has also, near the center of the town, a park of eighty acres, on which the natural forest is to be left. Some of the trees are very large. One I noticed that would measure sixteen or eighteen feet in circumference.

It is two miles from Quindaro to the mouth of the Kansas (Wyandotte City), and two miles from there to Kansas City, so that three cities are projected, all within the space of four miles. This fact alone shows that the attention of town building has set strongly toward the neighborhood of the mouth of Kansas River. These three towns will be the means of concentrating more business within these four miles, than will be done anywhere else in the Territory, and would seem to indicate that, somewhere near the mouth of the Kansas River, the metropolis of Kansas may be expected to grow up.

Kickapoo Village is on the Missouri, about four miles above Fort Leavenworth. The Kickapoo tribe has made considerable progress in agriculture, many of them have comfortable houses, around which may be seen gardens, numerous domestic animals, fowls, etc.; and these, with other indications of civilization, form a pleasing contrast with the condition of many of the other tribes.

The Iowa and Sac Mission and School is situated about twenty-six miles northwest from St. Joseph, Missouri, on the emigrant road from that place. The Mission is said to have been established as early as 1837. The mission-house is a spacious brick edifice, and cost \$8,000. The farm contains one hundred and fifteen acres; more than half of this is used for raising crops of grain, etc. Several assistants are employed in the school, which is composed of two departments for the respective sexes.

Delaware, a postoffice, is on the Kansas River, ten miles from its mouth. It contains two or three trading-posts, a blacksmith shop, etc.

Briggsville, in the vicinity of Delaware, is the seat of a mission and school of the American Baptist Missionary Union, organized in 1847.

Shawnee Mission is three miles from Westport, Missouri, one mile from the State line, and about eight miles from the mouth of the Kansas River. Here is an Indian Mission Labor School, under the direction mainly of the Methodist Episcopal Church, South.

The *Shawnee Baptist Mission* is two miles northwest from the Methodist school.

The *Friends' Shawnee Labor School* is situated three miles west from the Methodist school. The Friends have been laboring among the Shawnees for fifty years, including the period before their removal.

Saint Mary's, on Kansas River, fifty-one miles below Fort Riley, is an important and very flourishing missionary establishment among the Pottawatomies, and is the largest which the Roman Catholics have in Kansas. This missionary establishment enjoys great popularity among the Indians. Its site is said to be

the most lovely spot in the Indian country. The mission buildings, with the adjacent trading-houses, groups of Indian improvements, and extensive cornfields, all give it the appearance of a town.

Fort Riley is a new military post at the junction of the two main branches of the Kansas River. It possesses excellent military advantages, being in the midst of a fertile country, which abounds in timber, building materials, good water, and grass. Hence it is a desirable spot for permanent settlers, who can make a very profitable business in furnishing the supplies of subsistence, forage, etc., required by the garrison, and by the troops and emigrants going to California and New Mexico, who will halt here. At favorable seasons of the year, the Kansas River is navigable to this place. This vicinity of the junction of the Forks of the Kansas was formerly known as Grand Point, near which is a Methodist mission.

The events which have recently transpired in Kansas are of such interest, and belong so directly to the History of the "Great West," as to demand a supplementary chapter in our work. The following summary has been derived from various published sources, as given by *both parties* to the struggle, with a single eye to a truthful narrative of events as they occurred.

The question of Slavery being the hinge on which the whole struggle in Kansas turns, it will be necessary, in order to comprehend the position of the contending parties in that Territory, to take a brief view of the history of Slavery in this country, and the legislative action of the General Government in relation to it.

Ordinance of 1787.—Before the adoption of the Constitution, in 1789, a majority of the States were Slaveholding. Measures had, however, been taken in all the Northern States to abolish it, and in all except six of the thirteen old States, it soon ceased to exist as an institution. In 1787, the territory lying northwest of the Ohio River, was ceded to the United States by the States of Virginia, New York, and Connecticut. Congress accepted the cession, and passed an ordinance for the government of the Territory, in which was incorporated the following provision, originally proposed by THOMAS JEFFERSON:

Article 6 of the "Ordinance for the Government of the Territory of the United States, Northwest of the River Ohio.—"There shall be neither Slavery nor involuntary servitude in the said Territory, otherwise than in the punishment of crime, whereof the party shall have been duly convicted: *Provided*, always, that any person escaping into the same, from whom labor or service is lawfully due in any one of the original States, such fugitive may be lawfully reclaimed and conveyed to the person claiming his or her labor or service as aforesaid."

This constituted all the territory belonging at that time to the United States.

This ordinance was ratified, and full effect given to it, by the

first Congress which met under the new Constitution, in August, 1789.

The first legislation of Congress upon territory south of the Ohio River, not covered by the ordinance of 1787, was in March, 1804, when Louisiana was erected into two Territories. The southern Territory, called the Territory of Orleans, formed that part south of the latitude of thirty-three degrees, and in it Slavery was allowed by actual settlers only, and under certain restrictions. The northern Territory, viz: that part north of latitude thirty-three degrees, was named the Territory of Louisiana. The act of formation is totally silent as to Slavery in the northern Territory.

Congress took the precaution to place this district under the law-making power of the Governor and Judges of the Indian Territory, which was free territory, under the ordinance of 1787; but their intent was foiled, for the Governor and Judges adopted a code of laws under which Slavery found legal shelter in what is now the States of Missouri and Arkansas. Yet, by the statutes, the Congress of 1804, would not allow Slavery to go into the Territories north of the parallel of thirty-three degrees, which may be called the Compromise line of that year.

The Missouri Compromise.—The next action of the General Government in relation to Slavery in the national Territories, was in the year 1820.

On the 18th of December, 1818, the petition of the Legislature of Missouri Territory, asking for the admission of that Territory into the Union, was presented to Congress. A bill embodying the views of the petitioners was framed, and an amendment prohibiting the *further introduction* of Slavery, was adopted by a vote of eighty-seven to seventy-six in the House of Representatives. On the 15th of March, on motion of James Tallmadge, of New York, an amendment, providing that all children born within said State after its admission, shall be free at the age of twenty-five years, was adopted by a vote of seventy-nine to sixty-seven. The Senate refused to concur in these two amendments, and, as the House insisted on them, the bill did not pass at that session.

During the next session of Congress, the Missouri Bill being again under consideration, Mr. Thomas of Illinois, proposed, on the 18th of January, 1820, the following amendment, in order to induce the House to yield their purpose of preventing the further introduction of Slavery into Missouri:

“*And be it further enacted*, That in all that Territory ceded by France to the United States, under the name of Louisiana, which lies north of thirty-six degrees thirty minutes north latitude, excepting only such part thereof as is included within the limits of the State contemplated by this act, Slavery and involuntary servitude, otherwise than in the punishment of crime, whereof the party shall have been duly convicted, shall be, and is hereby forever prohibited: *Provided, always*, That any person escaping into the same, from whom labor or service is lawfully claimed in any

State or Territory of the United States, such fugitive may be lawfully reclaimed, and conveyed to the person claiming his or her labor or service as aforesaid."

This proposition had the desired effect.

The question of substituting this compromise amendment for the amendments restricting Slavery in Missouri was decided in the affirmative, in the House, by a vote of one hundred and thirty-four to forty-two. The same proposition, in the Senate, was adopted by a vote of thirty-three to eleven. The two Houses thus concurring with each other, the bill passed, and Missouri was to be admitted as a Slave State without any restriction as to Slavery, *on the express condition* that Slavery should be forever prohibited in all Territory of the United States north of thirty-six degrees thirty minutes.

The Territory of Kansas was a part of this Louisiana purchase, and, as it all lies north of thirty-six degrees thirty minutes, was included in this Missouri prohibition.

The strong excitement which this memorable contest produced both at the North and at the South, was at that day unprecedented. It, however, seemed to be wholly allayed after a few years. The North acquiesced in the admission of Missouri, and afterward of Arkansas (both lying south of the line), as Slave States, and the South acquiesced in the admission of Iowa (lying north of the line), as a Free State. But little occurred for a period of twenty-five years, to disturb the harmony subsisting between the two sections of the Union.

The Kansas-Nebraska Bill.—Some years after the passage of these compromise measures, Mr. Senator Douglas, of Illinois, brought forward in the Senate, a bill for the organization of the Territories of Kansas and Nebraska. The bill, as first drawn, contained no provision relating to Slavery. Subsequently, however, Mr. Douglas inserted an amendment, which repealed, in terms, the prohibition of Slavery in both Territories by the Missouri Compromise. This provision is a part of the 14th section of the bill, and reads as follows:

"That the Constitution, and all the laws of the United States which are not locally inapplicable, shall have the same force and effect within the said Territory of Nebraska as elsewhere within the United States, except the 8th section of the act preparatory to the admission of Missouri into the Union, approved March 6th, 1820, which, being inconsistent with the principle of non-intervention by Congress with Slavery in the States and Territories, as recognized by the legislation of 1850, commonly called the Compromise Measures, is hereby declared inoperative and void; it being the true intent and meaning of this act not to legislate Slavery into any Territory or State, nor to exclude it therefrom, but to leave the people thereof perfectly free to form and regulate their domestic institutions in their own way, subject only to the Constitution of the United States: *Provided*, That nothing herein

contained shall be construed to revive or put in force any law or regulation which may have existed prior to the act of 6th March, 1820, either protecting, establishing, prohibiting, or abolishing Slavery."

This bill, after a bitter and most exciting contest, passed the Senate on the 4th of March, 1854, by a vote of thirty-seven to fourteen; and the House of Representatives on May 23, 1854, by a vote of one hundred and thirteen to one hundred. It provided for the appointment of the Governor and Judges of the Territory by the President and Senate.

The first officers appointed by the President were: A. H. Reeder of Pennsylvania, Governor; Daniel Woodson of Arkansas, Secretary; Samuel Dexter Lecompte, Chief Justice; Sanders N. Johnston and Rush Elmore, Associate Justices; Andrew J. Isaacs, Attorney; and I. B. Donaldson, Marshal.

Immediately after the passage of the bill to organize the Territory, settlers from Missouri began to move over the border. Clubs were formed to promote settlement, and meetings were held, at which strong resolutions toward making Kansas a Slave State were passed. On the other hand, a general feeling existed in the Free States to the effect, that Congress having failed to protect Kansas from the inroads of Slavery, the question must be met on the soil of the Territory, and, if possible, decided for Freedom by the doctrine of "Squatter Sovereignty" itself. A very considerable emigration was the result, and several "Emigrant Aid Societies" were organized, with capital held in shares, and intended to facilitate the speedy and economical removal of settlers from the Free States. These organizations at once excited in the State of Missouri a feeling of intense animosity. The fear that Kansas would be made a Free State operated with great force in the border counties, in consequence of a feeling of insecurity to Slave property in such an event.

It was necessary, if the institution of Slavery was to flourish in security and vigor in Missouri, that Kansas should be a Slave State. Thus the original opposition of the Missourians to the settlement of Kansas by Free State men grew out of the necessity of their position, not from a feeling of antagonism to the North, nor to the Emigrant Aid Societies, considered simply as such. Moreover, the immediate proximity to Missouri of the fertile soil of Kansas, lying in the same latitude, and promising bountiful rewards to the planter, operated as a strong incentive to possession. The feeling thus excited in Missouri soon spread to other Southern States. Bound together by a common interest, and that interest depending directly upon the profitable market for Slave labor, they could not look on with indifference. The value of Slave property is enhanced by every new field of fertile soil that can be opened for its employment. Thus the South, having but a limited supply of productive soil within her own borders, continually needs room to spread, and seeks new Territories for culture.

Governor Reeder arrived at Fort Leavenworth on the 6th of October, 1854, and soon after visited Lawrence, where he was met by the citizens, and General Pomeroy delivered an address of welcome, to which he replied, declaring his intention to maintain, as far as possible, law and order in the Territory—to preserve the purity of the ballot-box, and the right of free speech.

The first election of delegates to Congress took place November 29, 1854. This Territory was divided into nineteen districts. Governor Reeder appointed election judges, and instructed them to administer the oaths to every person suspected of residing in another State or Territory, and who desired to vote. The organized army of Missourians, however, took possession of the polls, and elected General Whitfield as the delegate for Kansas to the Congress of the United States. The opposition vote was divided.

Governor Reeder issued, in March, 1855, a proclamation for the election to take place on the 30th of that month, in which he stated that “a voter must dwell in the Territory at the time of offering his vote; that he must then have commenced an actual inhabitancy, which he actually intends to continue permanently, and he must have made the Territory his residence, to the exclusion of any other home.

It is alleged by the Free State men, that “on the 30th of March, a body of five thousand men from Missouri, regularly officered and disciplined, seized on all the polls in each election district in Kansas; appointed their own judges where those previously appointed would not conform to their requirements; and cast about three-fourths of the votes polled, returning pro-Slavery men to the prospective legislature from every district in the Territory. The road between Westport and Lawrence was filled with covered wagons loaded with Missourians, who made no secret of their going into the Territory to vote, and then returning. Long before the ballot-boxes were closed, hundreds were returning to their Missouri homes.

“At many of the polling places, violence was used to forcibly eject those having legal possession of the polls previous to this foreign arrival. The polls were thus taken possession of by the Missourians, who made their own returns as to the results of the election.”

In consequence of these acts of violence, protests against granting certificates were sent to Governor Reeder by numbers of the Free State party.

It was rumored that the Missourians intended to assassinate Governor Reeder if he refused to grant certificates to the men they had elected to the legislature. Governor Reeder allowed four days' time in which protests against frauds should be sent in; this time was too short to receive protests from distant districts, and moreover, the threats of the Missourians intimidated many, and consequently most of the members received their certificates. Wherever the election was contested, or papers were sent in showing fraud,

Governor Reeder refused to grant certificates, and ordered a new election to be held in those districts.

On the 2d of July, the legislature assembled, according to the proclamation of the governor, at Pawnee, when it was organized by the choice of Daniel S. Stringfellow as speaker.

The next day Governor Reeder's message was received. In it, the governor contended for the right of the people of Kansas to settle their own affairs, uninfluenced by those of other States; declared that the Territorial Legislature might act on the question of Slavery to a limited and partial extent, and temporarily regulate it in the Territory; showed what laws were then in force; directed attention to the definition of the boundaries of counties and districts, and the qualification of voters; recommended a stringent Liquor Law on account of the Indians; thought that a light tax only would be required, and that pre-emptions might be taxed; recommended the immediate establishment of a seat of government; and announced the following as the population of the Territory: males, 5,111; females, 3,393; slaves, 192; total, 8,706.

A report was received from the Committee on Contested Elections, which had been empowered to send for persons and papers, recommending that the Free State members who had been elected in the place of those to whom Governor Reeder had refused certificates be ejected from their seats, and those previously returned, as elected in March, be received as members without the certificates of the Governor. The report stated that the committee had received a bundle of papers from the Governor in relation to the contested seats; but having determined before they came how to proceed in the matter, they had decided neither to open the papers nor to examine the parties. This report was adopted by a large majority, and the action protested against by the members who were thus expelled from the House, which protest the House refused to have recorded on the journal. In the course of the first week the legislature passed an act removing the seat of government from Pawnee to the Shawnee Manual Labor School, the act to take effect from and after its passage; also, an act adopting the laws generally of Missouri as the laws of Kansas. On the 6th of July, the governor vetoed the bill removing the seat of government. The legislature then passed it by a two-thirds vote, and immediately adjourned to meet according to said act. When the committee waited on Governor Reeder to inform him of the action of the House, he replied in very distinct terms, that he would not recognize any further action of theirs, but would consider the legislature dissolved by that act.

On the 22d of July, Samuel D. Houston, the only Free State member of the House of Assembly, resigned his seat, giving as a reason for so doing, the introduction of illegal elements into the body, and the nullification of its own proceedings by its illegal removal from Pawnee, and declaring that some of the members of

the House, were not then, nor never had been, residents of the Territory, but were living in the State of Missouri.

July 25, the two Houses went into joint session, and elected the various county officers, for the several counties into which they had divided the Territory. These appointments were for *six years*.

Among the acts passed by the legislature, was an act to punish persons decoying slaves from their masters, all persons found guilty are to be punished with *death*. Another of the acts gives the election of all county and local officers directly to the legislature, thus stripping the people of all power—a proceeding without which all their laws would have been a dead letter; but by which they so make their appointments that none but pro-slavery men hold office.

On the arrival of Governor Reeder at Shawnee Mission, on the 16th of July, he found a letter from Secretary Marcy, informing him that he was suspended on the plea of speculation in Kaw lands. He was one of a company that proposed to purchase a portion of these lands, provided the General Government would sanction such a purchase. The purchase in question was never made. The duties of governor then devolved, *pro tem.*, upon the Secretary of the Territory.

Subsequently Wilson Shannon, of Ohio, received the appointment of governor and proceeded to the Territory, where he arrived early in September. On his arrival in Westport (Missouri), he declared publicly to the people: "The enactments of *your* legislature are valid, and I have the will, and am clothed with the power, to employ whatever force is necessary to carry them into execution; and I call upon *you* to sustain me in the discharge of this duty.

"I think, with reference to Slavery, that as Missouri and Kansas are adjoining States—as much of that immense trade up the Missouri, is already rivaling the commerce between the United States and some foreign countries, and must necessarily lead to a great trade and perpetual intercourse between them—it would be well if their *institutions* should *harmonize*; otherwise there will be continual quarrels and border feuds. I am for slavery in Kansas." It is but just to the governor to state, that he has denied some of the positions as reported in this speech.

On the 5th of September, 1855, a Free State Convention was held at Big Springs. It was numerous and respectably attended, numbering in all one hundred delegates.

This Convention, among other resolutions, resolved to repudiate all the acts of the so-called Legislature of Kansas; to take no part in the election of a delegate to Congress which that body had appointed; but to appoint an election to take place one week after that appointed by the legislature. Ex-Governor Reeder was agreed upon as the candidate for the Free State party. It was expected that he would be elected on the occasion without oppo-

ST. PAUL MINNESOTA.

sition; and as General Whitfield would be elected by the Missourians, the effect would be to bring the question of popular rights in Kansas before the House of Representatives, at Washington.

A Convention assembled at Topeka, on the 19th of September, to consider the expediency of the immediate formation of a State Government. Ten districts were represented by the thirty-nine delegates. William Y. Roberts, of Washington, was chosen President.

On the 9th of October, pursuant to notice the Free State men held their election. They allowed no non-resident to vote, and no resident who had not been such for at least thirty days; they had regular inspectors, opened their polls, closed them, and counted the ballots with due regularity, returned some two thousand four hundred votes cast—nearly all for Governor Reeder as delegate. They also elected delegates from the several districts to a Constitutional Convention to assemble at Topeka on the fourth Tuesday of the month, as aforesaid, and to form a State Convention. That Convention assembled accordingly, and chose Colonel James H. Lane its president. It was provided that the Constitution, as adopted, should be submitted to the votes of the people on the 15th of December, and if sustained by a majority of the voters, that the election under it for State officers should take place on the third Tuesday in January.

On the 15th of December, 1855, the new Free State Constitution, adopted by the Topeka Convention, was voted on by the people. Little interruption was experienced, except at Leavenworth, where the Free State citizens were overawed and prevented from holding their meeting.

On the 22d, while the editor of *The Territorial Register*, the Free State paper at Leavenworth, was absent attending a convention to nominate officers under the Free State Constitution, his office was attacked by a Missouri mob, and his press destroyed.

The Topeka Legislature met and organized on the 4th of March. They chose senators, and passed certain acts, but determined not to make any assumption of the actual administration of affairs till Congress had acted upon the question of the admission of Kansas under the Topeka Constitution.

It was upon the strength of these proceedings that indictments for high treason were found against Charles Robinson, George W. Brown, ex-Governor Reeder, General Lane, George W. Deitzler, and others, who had participated in the formation of the State Government. Messrs. Robinson, Brown, Deitzler, and several others were arrested and imprisoned at Leecompton during the entire summer, guarded by United States Dragoons.

On the 19th of March, 1856, the House of Representatives, at Washington, having under consideration the conflicting claims of Governor Reeder and General Whitfield to represent the Territory of Kansas in Congress, appointed a commission to proceed to

Kansas and investigate fully the facts as to the election of representatives. This committee was composed of Mr. Howard of Michigan, Mr. Sherman of Ohio, Mr. Oliver of Missouri. They arrived at Lawrence on the 17th of April, and proceeded immediately to take testimony in relation to the matters in dispute.

We here give the following extract from the Report of the Kansas Investigating Committee:

"The alleged causes of the invasion of March, 1855, are included in the following charges:

"I. That the New England Aid Society of Boston was then importing into the Territory large numbers of men, merely for the purpose of controlling the elections. That they came without women, children, or baggage, went into the Territory, voted, and returned again.

"II. That men were hired in the Eastern or Northern States, or induced to go to the Territory solely to vote, and not to settle, and by so doing to make it a Free State.

"III. That the governor of the Territory purposely postponed the day of election, to allow this emigration to arrive, and notified the Emigrant Aid Society and persons in the Eastern States of the day of election, before he gave notice to the people of Missouri and the Territory."

But these charges are not substantiated by proof.

"On the 24th of July, 1854, certain persons in Boston, Massachusetts, concluded articles of agreement and association for an Emigrant Aid Society. The purpose of this association was declared to be 'assisting emigrants to settle in the West.' Under these articles of association each stockholder was individually liable. To avoid this difficulty, an application was made to the General Assembly of Massachusetts for an act of incorporation, which was granted. On the 21st day of February, 1855, an act was passed to incorporate the New England Emigrant Aid Company. The purposes of this act were declared to be 'directing emigration westward, and aiding and providing accommodation for the emigrants after arriving at their place of destination.' The capital stock of the corporation was not to exceed one million of dollars. Under this charter a company was organized and companies went into the Territory in the fall of 1854, under the articles of the association referred to. The company did not pay any portion of the fare, or furnish any personal or real property to the emigrant. The company, during 1855, sent into the Territory from eight to ten saw-mills, purchased one hotel in Kansas City, which they subsequently sold, built one hotel at Lawrence, and owned one other building in that place. In some cases, to induce them to make improvements, town-lots were given to them by town associations in this territory. They held no property of any other kind or description. They imposed no condition upon their emigrants, and did not inquire into their political, religious, or social opinions. The total amount expended by them, including

the salaries of their agents and officers, and the expenses incident to all organization, was less than \$100,000.

"Their purposes, as far as your committee can ascertain, were lawful, and contributed to supply those wants most experienced in the settlement of a new country."

Early in April, several hundred men from Georgia and Carolina, arrived in the Territory, under the command of Major Buford, of Georgia.

On the 24th of April, Sheriff Jones entered Lawrence and made several arrests of Free State men. While in his tent he was shot with a pistol, without ball, and lay for some weeks, reported dangerously wounded. The people of Lawrence, in a public meeting held April 30, repudiated any connection with, or approval of the shooting of Jones.

On the 5th of May, the grand jury found bills of indictment against Governor Reeder, Governor Robinson, Geo. W. Deitzler, and six others, for treason.

Governor Reeder was summoned to appear before the grand jury, but declined, on the ground of privilege, he being then in attendance on the sittings of the Congressional Investigating Committee at Lawrence, taking evidence to support his claims to a seat in the House.

On the 8th of May, Governor Robinson, descending the Missouri River on his way east, was seized and detained by a mob at Lexington, Missouri. He was afterward arrested and sent back to Kansas.

Reeder and Lane being indicted on the same charge, succeeded in making their escape out of the Territory.

On the 11th of May, Marshal Donaldson, summoned a *posse* armed with United States muskets, furnished by Governor Shannon, from the militia quota of the Territory, and took Buford's men into pay, together with several hundred others. He then proceeded toward Lawrence, where he announced his intention of making arrests of several obnoxious Free State men. The citizens of Lawrence in public meeting, determined to offer no resistance to the serving of the writs by Donaldson, and denied the charge of having resisted any of the authorities of the Territory.

We subjoin a "Free State" account of the sacking of Lawrence, followed by a counter-statement from a pro-Slavery source:

LAWRENCE, KANSAS, *May* 21, 1856.

I am called upon to write one of the many painful events in the history of Kansas, namely, the partial destruction of Lawrence by an armed ruffian mob. It had been rumored so long that these Southern ruffians were going to "wipe us out," that people did not believe they would. The attempted assassination of Jones, the refusal of Governor Reeder to leave the Investigating Committee, and the startling facts brought to light in the testimony before that body, gave them pretext and inclination enough to do almost

anything. Especially did they want to exasperate us to make some false step; but in this they failed, and the Lawrence people remain, as they always have been, right before God and the world—contending only for the free exercise of those inalienable rights which God gave, and which the world—except in tyrants—acknowledge. The people made no preparation to fight, and the Committee of Safety, appointed by a public meeting of the people a few days ago, forbade any resistance whatever to the United States authorities. Free State men who left their claims and volunteered to assist in defending the town, were sent away, and returned home. Men were advised not to gather in groups in the streets; to be each at his proper employment, and if the United States Marshal called upon any one to assist in making arrests, to do so cheerfully. This was regarded by the committee (General Pomeroy was its chairman) as the best policy.

This morning about six o'clock, a large body of men came from the camp near Lecompton, and halted on Mount Oread, near the residence of Governor Robinson, in this city. They were armed with United States rifles, (where did they get them?) shot-guns, muskets, Sharp's rifles, broadswords, bayonets, revolvers, cutlasses, and bowie-knives. The Sharp's rifles were in the hands of a company called the "Kickapoo Rangers." They mustered about three hundred horsemen and two hundred footmen, as near as I could count—five hundred men. They were headed by one I. B. Donaldson, United States Marshal of Kansas, who claimed that they were there as his *posse*—they having responded to his late proclamation. They formed in line, facing the northeast, and planted two large cannon in range with the Free State Hotel and other large buildings in Massachusetts street. They carried banners over their heads, far more significant than a death's head and cross-bones, doubtless, to those who knew what they meant. There was a white flag with black stripes; a red flag with a lone white star in the center. On one side of this flag was "SOUTHERN RIGHTS," and on the reverse was "SOUTH CAROLINA," inscribed with black paint. The orthography displayed on that and other flags on which I saw inscriptions, might have been at par in Chaucer's time. But let their orthography go. What have these inscriptions, what has "SOUTH CAROLINA" or "SLAVERY IN KANSAS," to do with Marshal Donaldson's writs? About noon this man went, with a *posse* of ten men, and arrested G. W. Deitzler, Esq., private secretary of Governor Robinson; Colonel Jenkins, whom they had set free yesterday; Judge Smith, who had just returned from the east, and some others less conspicuous—taking them as prisoners to the camp. This is the third time for Colonel Jenkins within two weeks, and they never have charged him with anything except Free State-ism.

About three o'clock P. M., Sheriff Jones, accompanied by twenty-five horsemen, armed to the teeth, rode up to the east door of the Free State Hotel and stopped. General Pomeroy went out to

meet him, and several others, myself among the number, followed. Jones looks thin and pale, but quite as bloodthirsty as ever. He demanded that all the arms be given up to him, and said he would give them one hour to prepare for the consequences if they did not do so. General Pomeroy said that he had no control over private property, but that if there were any public arms, they would be given up. After some consultation with the committee, they handed over several pieces of artillery, which were immediately conveyed to their lines.

In the meantime, the United States Marshal dismissed his *posse*, and they had moved their two field pieces into Massachusetts street—the ruffians being summoned on the spot by Jones as his *posse*. About this time Atchison made a speech to them, but I could not get near enough to hear what he said. He was frequently applauded by cheers and howls. At this time women were seen hurrying with their children, mostly all weeping, through the streets, trying to get out of the city. Citizens looked each other in the face and read there the suppressed anger of each at the treachery of Donaldson. Why? Jones was in the town with an army of five hundred men. Not an effort could now be made for defense; that was too late. Jones gave the people an hour to get themselves out of the hotel; that it had been presented by the grand jury of Douglas county as a nuisance, together with the “Herald of Freedom” and “Free State,” and Judge Lecompte wanted them removed.

Further detail is unnecessary now. The lone-star flag was placed on the offices of these papers, the presses destroyed, and the type thrown into the river. They then proceeded to cannonade the Free State Hotel. This they tried more than an hour, to raze to the ground by this means, but in vain, for it stood as firm as ever. They then attempted to blow it up with powder, but failed again. They then fired it, and it burned to the ground, amid the shrieks and howls of an infuriated mob. The men of Lawrence, deprived of their arms, looked on. No resistance was made—not a word said. Those who were not engaged in taking care of women and children, looked on at this succession of outrages as if they doubted the evidence of their senses. It was hard to believe that God’s beautiful earth contained such savages!

Then commenced the pillage and robbery of private dwellings; money and articles of value were sought for and obtained. One More, a recent settler, lost \$8,000. Jewelry, fine cloths, everything portable and of value, was freely taken. The people avoided contact with the mob as much as possible. No other buildings in the town were injured.

About seven o’clock they began to vacate the town. At this hour—eleven P. M.—all is still and quiet again; but the ruffians have set fire to Governor Robinson’s dwelling-house, on Mount Oread, and I hear its timbers crackling from here. His loss will be about \$5,000—not estimating his library, which was said to be

very valuable. The whole loss is estimated by some at \$100,000, and by some even more than that. It is a blow we may not recover from soon, but we will not sink under it. The sentiment of the people is, "Whipped, but not conquered."

The following account of the invasion of Lawrence is taken from the "Western Dispatch," Independence, Missouri.

INDEPENDENCE, Mo., Friday, *May 23*, 1856.

We learn from a gentleman just from Lawrence, that he passed there on yesterday, late in the afternoon, and that, at that time, the sheriff—Jones, who was not killed—was executing the process of the courts. He had arrested several prisoners, charged with high offenses, and had, under process from the courts, abated several nuisances, among others, the Emigrant Aid Hotel, in reality a fort, and built to enable Robinson and his band to hold out against the laws. The two printing presses, and a large quantity of material, were destroyed. Several pieces of artillery were taken, and about two hundred Sharp's rifles. (When will Parson Beecher and Professor Silliman get up another subscription for the benefit of the Ruffians?)

The "Herald of Freedom" was just being printed, and we have a copy of the half-printed sheet, from which we will make some extracts in future. Yesterday's proceedings prove Brown to be a false prophet, however.

No violence was done to any person in the town, or to any person.

Up to the very hour of Sheriff Jones' entry upon the scene, they strongly proclaimed their resistance to the Territorial authorities, and their valiant determination to die at the end of their guns before they would submit. The presumed entry of that gentleman among them, however, produced a wonderful change in their feelings.

We learn that the affair was managed in this wise:

The United States Marshal having summoned a *posse* to assist him in executing the laws, moved on the ground with his *posse*—in all four hundred and fifty or five hundred men—and took his position upon the hill overlooking the town. He then went down and made some arrests, without opposition, they all declaring that they did not intend to resist him (which was a lie, because Reeder had done it not a week before, as well as others.)

They seemed to chuckle over this, as if much ado had been made about nothing. The marshal then came up with his prisoners, and dismissed his *posse*, but the sheriff (Jones) was upon the ground, and, although still feeble from his wound, he took the saddle, and at once summoned the *posse* to his aid as sheriff.

He then rode into town at the head of twenty men, and announced to General Pomeroy and other prominent citizens his business, which was, as sheriff, to arrest certain men there, to take from the rebellious organization their arms, and to abate the fort

or hotel and presses as nuisances; that he desired to effect this peaceably if he could; and that they could decide whether it should be done peaceably or forcibly; and that he gave them ten minutes to make the decision.

Knowing their man, they, who an hour before swore resistance, lost no time to consent and submit, and the *posse* moved down about three o'clock, P. M., and without noise or confusion, proceeded to abate the nuisances, which was done in about two hours; and, after the prisoners were arrested, they withdrew.

It cannot be charged now that Missourians had any hand in this, for it is certain that the whole force on the ground was of the Territory itself, and did not number one-fourth of the Southern citizens therein. It doubtless will be charged to be another Missouri invasion, and we emphatically give it the lie in advance. There are large numbers of our citizens who sympathize with their friends in Kansas, but their sense of right, as well as of policy, prevented them from going, and they have not done so. It is the *bona fide* residents of the Territory who have contributed to this triumph of the laws, and it shows to all the world that they can and will see them executed.

These Northern gentlemen who think it their mission to regulate the affairs of the rest of the world, may find that they have mistaken their vocation, if they expect to conquer Southern and Western men in the open field. They do excel us in the manufacture of wooden clocks, and such like enterprises, and we have never denied it; but history has not shown, not even the history of Kansas, that they are our masters in the polite art of rifle-shooting, either in skill or willingness with the weapon; and if they are determined to bring this matter to a bloody issue, let it come now!

In truth, what a commentary is this surrender of fortified Lawrence, upon which so much money, labor, and wind have been expended to intimidate, upon the valorous boastings of Beecher and Greeley. What a lesson upon the usefulness and efficacy of that terrible invention, "Sharp's Rifle," to unstring our Southern nerves! Would it not be better to cross the Puritans with a race of men who will use weapons when they are put into their hands, and make less ado about their deeds, *to be done*, in the newspapers?

How is this stampede of officers and men to be accounted for on any other ground than sheer cowardice?

They have been claiming all along a larger population in Kansas, and have brought out a Congress Committee to prove it; and yet being in conscience opposed to the laws, with a fortified town, and abundance of arms in their hands, and loud proclamations to all the world that they would defend it with at least three hundred resident men (as they claim), two thousand seven hundred and seventy men enrolled in their secret league, they tamely submit to less than five hundred men.

Their dilemma is that they have lied as to their numbers, or slunk away like cowards when the crisis came.

We commend them to the prayers of Parson Beecher.

The following is taken from the *Doniphan (Kansas) Constitutional*, of May 23, 1856:

"We have just arrived from the notorious abolition hole, Lawrence. On Wednesday evening, the 21st, about five hundred men under the direction of the United States Marshal, assembled before the town, and demanded that the arms in Lawrence be given up, and he be allowed to arrest those for whom he had writs. They submitted to the demand and unconditionally surrendered, giving up four pieces of cannon and some twenty Sharp's rifles. Before the marshal dismissed the men, Sheriff Jones, though but lately shot by one of the cowardly traitors, in the darkness of the night, appeared on horseback and summoned the whole company to assist him in making arrests and carrying out his orders.

"The whole affair was done *with order and according to law*. The sheriff made about twenty arrests, and the grand jury of Douglas county having declared the Fort, or Big Rock Hotel, and the two printing-presses nuisances, the sheriff was legally bound to destroy them. Thirty cannon shots were fired at the Hotel, breaking it in many places, and then it was burned up. The two presses were totally destroyed.

"There were two or three abolitionists killed; two Southern men dangerously wounded by accident. After the Southern men left Lawrence, the house belonging to the vile traitor Robinson was burned, we have been told. This was contrary to orders, and meets with the condemnation of all the Southern men.

"The laws have been enforced even in Lawrence. Hurrah for the Law-and-Order men of Kansas.

"The Doniphan Tigers have returned with joy in their hearts and honor upon their company."

On the 26th of May, a skirmish occurred at the settlement of Osawattamie, in which three Free State men and five pro-Slavery men were killed. The Free State men now began to make a concerted and armed resistance to the bands which were spread over the Territory.

On the 28th of May, Major Walsh, of South Carolina, at the a party of Buford's men, arrested five of the principal men of Leavenworth, and ordered them to leave the city. At the same time a public meeting, called at Leavenworth, passed strong resolutions against the Free State men, and appointed a Committee of Safety.

Lawrence was sacked on the 21st of May. On the 1st of June the Free State men attacked a body of marauders who had established themselves at Palmyra, about fifteen miles from Lawrence, wounded five—having three of their own party wounded—took twenty-one prisoners, and recovered a good many arms and other things stolen from the Free State men. On the 3d of June another

attack was made on another pro-Slavery marauding party, which had established itself at Franklin, four and a half miles from Lawrence. The attack was kept up all night, when the assailants retreated, carrying off, however, a wagon-load of ammunition, arms, and provisions from a store-house of the enemy, of which they had possessed themselves. In this affair one of the pro-Slavery party was killed and two wounded—Free State men escaping without loss.

On the 20th of June, a company of seventy emigrants from Chicago to Kansas, on their way up the Missouri River on the steamer "Star of the West," were stopped and deprived of their arms at Lexington, Missouri, by a body of citizens of Missouri. The steamer was then suffered to depart on its way up the river, but was again stopped by a mob at Kansas City, where a company of armed southerners came on board the Star of the West, headed by David R. Atchison and B. F. Stringfellow, as an escort for the Chicago prisoners. Atchison and Stringfellow, as a committee, informed the prisoners that it would be useless for them to attempt to land; they could command three or four hundred men at any point, and as sure as any of them should attempt to land, they would be slaughtered.

On the 26th of June, a company of Massachusetts emigrants, under charge of Dr. Calvin Cutter, were stopped near Lexington, their arms taken from them by a mob, and they were afterward sent back down the river.

Two days after, a party of Illinois emigrants on the "Arabia," were robbed by a crowd of Missourians and others, and sent back like the rest. The Rev. Mr. Strawn, their leader, escaped and applied in vain to Governor Shannon, Colonel Sumner, and Chief Justice Lecompte for any assistance toward the recovery of his property.

These forcible seizures of arms and other property in the hands of the Free State men emigrating into the Territory, were continued to such a degree as ultimately to amount to a complete blockade of the Missouri River. In consequence of these interruptions, the intercepted emigrants began to take the circuitous route *via* Iowa and Nebraska, coming into Kansas over land.

The 4th of July, the time fixed for the assembling of the Free State Legislature, now arrived. Two days previous, a convention of the Free State party met at Topeka, and passed resolutions in favor of the Republican party and denunciatory of the Democrats, appealing to the friends of Free Kansas in Congress to stop the supplies until Kansas should be admitted under the Topeka Constitution. Marshal Donaldson and Judge Elmore read to the convention the President's February proclamation, and Governor Shannon's proclamation, and one from Mr. Woodson, Secretary of the Territory; also a note from Col. Sumner, saying that he would prevent the meeting of the Legislature. They were unheeded. About eight hundred persons were present, all armed.

Both branches of the Legislature met on the 4th. The roll was called and a quorum found to be present. About noon Colonel Sumner entered the town with two hundred dragoons, and planted two cannon at the head of Kansas avenue. The troops were drawn up before Constitutional Hall, when Sumner told the citizens that he would not disarm them or break up the convention, but he had orders to dissolve the Legislature, and would do so.

Sumner then repaired to the Hall of Representatives, and informed the members that he had orders to disperse them. He said: "I am called upon to perform the most painful duty of my life. Under the authority of the President, I am here to disperse this Legislature. In accordance with my orders I command you to disperse. God knows, I have no party feeling in the matter, and will have none while I hold my present position in Kansas. I have just returned from the border, where I have been sending home the Missourians, and I am now here with instructions to disperse this Legislature. I again command you to disperse."

Judge Schuyler asked if they were to understand that they were to be driven out at the point of the bayonet? Colonel Sumner replied, "I will use the whole force under my command to enforce my orders." The House then dispersed. A similar scene was enacted in the Senate, which also dispersed.

The convention was preparing resolutions indorsing the State Government and the Topeka Constitution. Fears of invasion kept large numbers from attending.

In the month of July, Colonel Sumner was suspended by the War Department, and General Persifer F. Smith, of Louisiana, appointed in his place.

On the 5th of August, at the request of the inhabitants of Osawattamie, a body of men from Lawrence marched against a post of Georgian marauders, established in that neighborhood.

We subjoin an account of their enterprise, taken from the *Missouri Democrat*:

"For some time past some of the young gentlemen imported into this Territory by Colonel Buford, have been gathering together at a camp on Washington Creek, one of the tributaries of Wake-rusa, and have been committing depredations upon the neighboring cornfields and poultry-yards of the settlers in that locality. As it was soon seen that their intentions were not to make claims and become actual settlers, the people there began to object to this order of things.

"At length the people sent over to Lawrence, a distance of some twelve miles, and asked the citizens of that town to assist in driving them away. A messenger was sent to Major Sedgwick, asking him to send a company of troops to that camp and investigate the matter, and if the charges of pillaging were true, to use the troops in driving them away, and protecting the actual settlers in their rights. Major Sedgwick replied, that these people were peaceable and peaceful; that this time the Free State men had been hoaxed;

that it would have been perfectly safe for any Freesoiler to go into the camp at Washington Creek.

"The messenger returned to Lawrence, and on the afternoon of the same day another messenger was dispatched to Washington creek, to ascertain, if possible, the truth of the statements made, so that the people of Lawrence would know how to act. Mr. Hoyt, who was selected to go, is already known to the public as the gentleman who lost about one hundred Sharp's rifles at Lexington. He was naturally very quiet and gentlemanly in his demeanor, courteous to strangers, and respected here by every body for his persevering bravery in behalf of the freedom in Kansas. He was sent to the Washington Creek pro-Slavery camp entirely unarmed. He was to have returned that same night with reliable information as to the truth of the charges alleged against this band of Georgians. He did not come back. The next day intelligence reached us that he had been first taken prisoner by them and then shot.

"The same evening (the 12th inst.), about one hundred of the young men of Lawrence volunteered to go to a camp of the Georgians at Franklin, and recover some of the arms which had been stolen during the sack of that city in May last. From thence they intended to march to Washington Creek, disperse the mob, and take away Mr. Hoyt's body, and return. It was a beautiful moonlight night, slightly hazy. The thought of redressing wrong by force of arms to the truly intelligent American citizen, is always a sad thought; but when redress of grievances can be had in no other way, and when the dearest rights of man are trampled under foot, then the redress of wrongs by arms becomes a necessary, but still a sad duty. Such was the feeling of most of the young men who marched along the road to Franklin.

"On arriving, they found that the news of their coming had gone before them, and that the Georgians were going to fight. They were gathered together in a large blockhouse, which was barricaded like a fort, through the chinks between the logs of which they pointed their rifles. They were asked at first to give up all their arms, which they refused to do. They were supposed to number about eighty. The Free State men drew close up and determined to 'storm the garrison, or die in the attempt.'

"The struggle lasted for about three hours, when the Georgians surrendered. They came out, threw down their arms, and fled. The Free State men then took possession of one brass cannon, fifty United States muskets (probably belonging to some arsenal), and a few guns taken from Lawrence during the sack of the 21st of May last.

"The Free State men had one killed and six wounded. The Georgians report four wounded. In consequence of their dead and wounded, the Lawrence boys returned home instead of going to Washington Creek, as they expected to do."

The opening of the new route through Iowa and Nebraska was completed about the 10th of August, when a party of about four

hundred emigrants arrived at Topeka. Three parties were left behind to form as many towns on the road. General Lane was at the head of this party.

On the 12th of August the second battle of Franklin was fought. The post of marauders established there was taken, and a cannon (the same with which Lawrence had been battered), together with large quantities of arms, and many stolen horses, were recovered. The loss of the Free State men was one killed and six wounded. Four of the pro-Slavery men were wounded. The men at Washington creek abandoned their fort and fled.

On the 14th of August, Colonel Titus' house, near Lecompton, was attacked by the Free State men, battered, and taken, together with twenty-one prisoners, including Titus, who was wounded. This Colonel Titus was formerly a Cuban filibuster, who migrated to the Territory from Florida. The loss of the pro-Slavery men was two killed and three wounded. The other side had four wounded—one mortally."

Osawattamie is situated on the Osage River, just above the confluence with that stream of the Potawatamie Creek. The Osage River above the Potawatamie is sometimes called the Meredezine, but is known on most maps as the Osage. The town was well located, and was the center of an extensive area of Free State as well as pro-Slavery settlement. It has several stores, shops, and a saw-mill, and was nearer to the State of Missouri than any other town in Southern Kansas.

The town had been threatened for a long time, and no defense by the Free State men was anticipated, from the fact that most of the goods had been removed from it, and the women and children had taken refuge at some less obnoxious point. Therefore it could not have been the spoils which they sought, they knowing, through their pro-Slavery spies resident in the place, that there was nothing worth coming for.

On Saturday morning, not much after daybreak, a messenger rode into town, stating that the Missourians were coming; that they were close at hand; that Fred. Brown, a son of Captain John Brown, had been met on the road by two scouts of the enemy, and that they had murdered him, and that if the people were going to fight, they had better prepare for it, and if they were not going to fight, that they ought to leave there very soon.

All was confusion among the Free State men. No ammunition had been prepared, and, except what they had on their persons and in their belts, none could be had. However, they saw that whatever was to be done, must be done quickly, and all the men in town, to the number of forty, rallied under their captains, Brown and Cline, and took to the timber which lines the banks of the Osage to the width of at least half a mile. In the meantime, the Border Ruffians were marching down the prairie in the direction of the town. It must be borne in mind that the Osage runs in a southeasterly direction, and the Potawatamie Creek in a

northeasterly direction. The town is built in the forks of these streams, and was approached by the pro-Slavery forces on the west. Meanwhile, the Free State men had rallied at two points, and had fired upon the enemy with effect. The pro-Slavery men then formed a line of battle, from which, and from the disposition they made of their forces, it was evident they did not know that they were fighting a mere handful of men. They were drawn up in order, and their line reached from stream to stream across the prairie, which, at the distance from the forks where they stood, must have been three hundred perches. They also pointed two pieces of cannon toward the woods where the Free State men were, but these effected nothing. The firing was kept up on both sides with great spirit for a long time, till the Free State men got short of ammunition. Meanwhile, a company of about fifty of the pro-Slavery men had been detailed to charge into the timber on the Osage side, and rout the Free State men. While these were advancing, a party of Free State men kept them engaged till the others who had no ammunition could make good their escape, by way of a private ford which the ruffians forgot to guard. The ruffians kept advancing. Three Free State men were still left—two on horseback and one on foot. One of the horsemen took to the river, the other followed, and then the single footman. It was a fearful time for all three, but especially for the footman. They were attempting to swim a rapid stream covered by the guns—some of them Sharp's rifles—of fifty of the ruffians. One of the horsemen was shot; the other escaped. The one who was shot was a Mr. Partridge, a brave man. The footman, finding that he could not swim and carry his rifle too, let it fall into the river and escaped. His name is Holmes, of New York City, and a brave fellow. The others, it is supposed, escaped by means of this private ford. The last time Captain Brown was seen, he was making for this ford, which if he crossed safely, he is still alive. If otherwise, then he is dead; because so obnoxious is he to them, that once in their hands, they would doubtless kill him instantly, as they have often threatened to do.

This army, estimated at from three hundred to six hundred, then entered the town, sacked once more the already sacked city, and burned every building in it to the ground, with the exception of two houses which belonged to pro-Slavery men, and a mill which they did not see. It is evident, from the manner in which they did this thing, that it was done in a great hurry, and done too under a fear of being caught at it by a larger force than their own. Indeed, so great was their hurry to get away from the scene of their outrages, that they left one of their party lying dead in the street.

On the next day after the battle of Osawattamie, the pro-Slavery forces appeared at Prairie City, still nearer the town of Lawrence, but moved away without doing any damage. As soon as all this news reached Lawrence, Lane marched with three hundred men to

attack the enemy's camp at Bull Creek, accomplishing that day forty-five miles, and that without food. On the 31st he approached the Missouri camp, but the enemy, without stopping to fight, retreated before him. Lane followed them up till they had crossed the Missouri border, when he returned to Lawrence, leaving, however, a strong force at Hickory Point.

The pro-Slavery army hereupon postponed their contemplated attack on Lawrence until the 13th of September. On the 1st, Atchison resigned, and General Reid was chosen commander-in-chief.

Comparative quiet now prevailed in the Territory, and for about two months but little fighting occurred. The Free State prisoners, however, still remained in close confinement at Leecompton, and the laws of the pro-Slavery Legislature in full force against the Free State men.

Meanwhile the "Congressional Committee of Investigation" closed their labors, and submitted a Report to Congress, accompanying a large volume of testimony. Mr. Oliver, of Missouri, presented a "Minority Report," in which he controverts the conclusions arrived at by the majority.

In his report, Mr. Oliver states the broad fact is established, that the Legislature elected March 30th, 1855, was a legally and properly constituted body, on the ground that it was so recognized by Governor Reeder, as shown by his communicating officially with them after their organization. We quote from his report:

"Never until August, 1855, after he, Reeder, was removed from the office of governor, did he object to the election of a majority of the Legislature, both in the Council and in the House of Representatives, to whom he had previously given certificates.

"These great leading and essential facts, upon which the validity or invalidity of laws, or '*pretended laws*,' of Kansas must rest, are not denied, or even assailed by a particle of testimony taken by the committee; and, with these facts unassailed and unimpeached, it is beyond the comprehension of the undersigned how the majority could come to the conclusion, that the laws passed by the Territorial Legislature were null and void, in consequence of any illegality, even if such had been proved in the election of its members. All questions relating to that election were closed by their waiver at the proper time, and without an investigation by the proper authority. This is a well-fixed principle in all our representative institutions; upon it they all rest, and with the correctness of it Governor Reeder himself seems to be duly impressed. This the testimony clearly discloses. In a letter found in the streets of Lawrence, and proven before the committee to be in the handwriting of Governor Reeder, and bearing his genuine signature, dated in this city on the 12th of February, 1856, and addressed to a friend of his in Kansas Territory, he says:

"As to putting a set of laws in operation in opposition to the Territorial Government, my opinion is confirmed instead of being

shaken; my predictions have all been verified so far, and will be in the future. *We will be, so far as legality is concerned, in the wrong; and that is no trifling matter in so critical a state of things, and in view of such bloody consequences.* * * *

I may speak my plain and private opinion to our friends in Kansas, for it is my duty. But to the public, as you will see by my published letter, I show no divided front.

“This letter and another, also found, were addressed, as it is understood, to Governor P. Lowry, his friend, and formerly his private secretary, while he was governor of Kansas; and so important a bearing had they upon the *main facts of the case*, which are the *legality of the Territorial Legislature and their enactments*, that the majority of the committee, after they had admitted them as evidence, as it was clearly understood by all parties, attempted to reject them.”

From this it will be seen that Mr. Oliver argues, that even if the fact be admitted—which, by the way he denies—that the members were fraudulently elected, that their acts were legal and binding because the people had not taken the legal course at the proper time to have the alleged frauds investigated; or, in other words, that the certificate of the proper officer renders even a fraudulent election valid.

Although Governor Reeder, at the opening of the Legislature, recognized it as a legal body, yet, in a speech delivered in the latter part of the April previous, at Easton, whither he had gone on a visit, he made the following admission:

“It was indeed too true that Kansas had been invaded, conquered, subjugated by an armed force from beyond her borders, led on by a fanatical spirit, trampling under foot the principles of the Kansas Bill and the right of suffrage.”

It may be asked, why, in view of these facts, did the governor grant certificates to the members thus elected? The reply is, because representations, properly attested, did not reach him in season, and because, it is supposed, he was in fear of his life if he did not, threats of assassination having been made.

Mr. Oliver states, that the secret society, called the “Blue Lodge,” established in Missouri to send emigrants into Kansas to make it a Slave State, was formed to counteract similar organizations, first started at the East and elsewhere “for the avowed object of making Kansas a Free State, and in this way ultimately affecting injuriously the institutions of Missouri.”

Early in August, John W. Geary was appointed Governor of Kansas Territory by the President, and arrived about the 1st of September. On the 11th, he issued a proclamation declaring that the employment of the volunteer militia was not authorized by any instructions from the general government, and as their services were not needed he ordered them to be immediately discharged, to disband instantly or quit the Territory.

After this the outrages and skirmishes in the Territory rapidly

diminished. The return to Missouri of the large bands who had so long flourished unchecked, save by an occasional rebuff from the Free State men, left the latter without cause of war.

Just after the arrival of Governor Geary, over one hundred Free State men were arrested and thrown into prison at Leecompton, where they were guarded by several companies of pro-Slavery militia, under the command of Colonel Titus. Annexed is their address to the American people, with their signatures attached, detailing the circumstances leading to their imprisonment, and their subsequent treatment by the pro-Slavery officials:

VOICES FROM THE POLITICAL PRISONS OF KANSAS.

GREAT POLITICAL PRISON,
LEECOMPTON, KANSAS, *October 19, 1856.* }

TO THE AMERICAN PEOPLE:—

It is well known to the whole civilized world, that previous to the arrival of Governor Geary in Kansas, the Territory was ravaged by a most direful civil war. It is equally well known, that in all that terrible drama, the people of Kansas were alone the sufferers, and that organized bands of robbers and murderers from an adjoining State were almost the sole perpetrators. In the beginning, they had wrested our government from us, and made our laws, but finding us, as should be every people who have once tasted the sweets of liberty, unwilling to fawn to their dictates and acknowledge them our lords, they used fire, starvation, and the sword to bring us to submission. Having no other resource, our people were at last compelled to resort to the stores of our enemies for the necessities of life.

As we have said, such was the condition of things on the arrival of our new governor. He appeared among us about the 1st of September, and was hailed as our deliverer. The much-lamented Major Hoyt, who had known Geary in Pennsylvania, in Mexico, and in California, assured us that we might hope for justice and protection. Geary's course at Leavenworth City, and the assurances of Mr. Adams, his confidential friend and adviser, together with our ardent hopes for peace and rest, led us to believe he was our friend. All, at least, were willing to trust him, to act with him, and under his advice. Nor was this confidence in his friendship shaken by his inaugural and proclamation, which was issued on the 11th, copies of which were brought down to Lawrence the same evening by Mr. Adams, and read to the people. We, therefore determined to take no offensive steps without his sanction.

At daybreak, on the morning of the 12th of September, Governor Geary, at the head of four hundred United States troops, rode up to the fort on Capitol Hill, near Lawrence, and asked who had command of the place. Captain Bickerton answered, "I have the honor to command here at present." The governor then advanced, saying, "I am Governor Geary of Kansas; I have come to prevent

the effusion of blood. I have heard that a body of one thousand five hundred men were marching on Lawrence for the purpose of destroying the town." Geary was then asked if he knew that to be a fact, and replied that he had it "officially." Captain Bickerton remarked, that "if there are no more than one thousand five hundred, they will go back faster than they came." With an appearance of astonishment, the governor asked, "*Don't you expect to be governed by the Constitution?*" Captain Bickerton responded, that the Free State men had always been governed by it. "Well," said the governor, "don't your people sometimes burn houses and commit other depredations?" "I should not wonder if, by this time, some have become so exasperated as to do so," returned Captain Bickerton, adding, as he pointed to the brass cannon, 'Sacramento,' "I was at Franklin, and aided in the taking of *that*; I was also at Washington Creek, and at Titus' Fort. We found Titus the evening before engaged in robbing houses and stealing horses [and he might have continued, 'making attempts upon the lives of our citizens.'] If the destruction of such dens of murderers and plunderers is house-burning, then are the Free State men house-burners indeed." The governor said, that he must see that the laws (Territorial) be obeyed. Bickerton replied, that the Free State men could not do so, so long as they believed Slavery to be an evil; for they could not even express sentiments in accordance with their belief, without exposing themselves to the heaviest penalties. After some further conversation about the "laws" and their validity, the governor inquired as to who were the constituted authorities of Lawrence, and being answered that there were no persons possessing that particular title, he offered to "treat" with Captain Bickerton. The captain, however, declined, and sent the governor into town, where he was warmly welcomed by a large number of citizens and other Kansas settlers who had taken refuge in the place, the governor assuring them, in a speech, that he intended to drive all lawless bands out of the Territory; but, for the present, *advised the Free State men to remain under arms for their own protection, and not disband until he should first have accomplished his part.*

While Lawrence was being visited by the governor, a band of Southern marauders, under the lead of one Robertson, made a descent upon the town of Grasshopper Falls, and after plundering the same, set fire to it, burning a considerable amount of property. They then retreated to Hickory Point, where they intended to remain fortified until called upon by the main body of the "Law-and-Order" army, to aid in the "wiping out" of Lawrence. The day following, General Lane, who had not yet seen the governor's proclamation, with between fifty and one hundred men, happened to pass near Hickory Point, and at the unanimous demand of the citizens under him, led them to an attack upon the fortified ruffians; but having no artillery, he found himself unable to dislodge them without great loss, so withdrew,

sending to Lawrence for reinforcements. Lane's messenger arrived at Lawrence on the evening of the 13th. Many wished to obey the summons at once—others were in a quandary. Robertson's company would soon join the forces before Lawrence, and must be whipped then if not now. Which course should be taken? Mr. Adams, the friend of the governor, and who remained in town after the departure of Geary, privately advised many to go, and publicly sanctioned the expedition, remarking that he would go himself if he only had a horse! This decided the course of the people. They thought for once that they could defend their home and friends with the approbation of high authority. A force of one hundred and twenty was soon raised, and marched under the command of Colonel Harvey. In the meantime, Lane received the governor's proclamation, withdrew from Hickory Point, and afterward disbanded his men; but this did not deter Harvey from making an attack upon the fortified position, which he did, completely routing the enemy, killing one of their number, and wounding many others. Such, at least, is the charge against his men. On our return, we encamped five miles from the scene of action where we were all taken prisoners that night, by a detachment of United States dragoons, under the command of Captain Wood. Our forces numbered one hundred and one. No resistance was made to the troops. After being deprived of our arms, a strong guard was placed around us. About this time, the guide, a pro-Slavery man by the name of Grayson, fearing that Captain Wood might possibly arrest the other party also, as intimations were made to that effect, broke through the guard for the purpose of giving them warning. He was hailed by the sentinel, but did not stop, at the same time crying out, "Halt yourself, G—d d—n you!" At this the sentinel fired, but without effect. Grayson returned it, the ball taking effecting in the sentinel's shoulder. Two other sentinels advanced and fired, one shot going through the heart of Grayson, killing him instantly. This is the only foundation for the story of a "great fight between the Abolitionists and the government troops," so much circulated by certain parties. The next day we were marched to Lecompton, where we were for the first week under guard of the Federal troops. We were then marched to the prison-house, where we now are, guarded by the Territorial militia, nine-tenths of whom are non-residents, and intend leaving the Territory so soon as the time of their three months' enlistment under Geary is out. A number of other prisoners have been brought in since, charged with various offenses. A number have escaped from this den of horror, a few have been discharged, and one was released this morning by the Great Deliverer. Our number is now ninety-eight, eighty-seven of whom are held on the Hickory Point charge. The remaining eleven are suspected of having been engaged in feeding their starving families with bread forcibly taken from those who were endeavoring to destroy them. Time and again the governor has

said, that no action should be taken concerning political offenses committed previous to the issuing of his proclamation; yet more than once since has he furnished that portion of the Federal army under his command to make seizures of persons so charged. We are all held either against this promise, or for following the advice of one supposed to speak authoritatively. And in all this time, *not a pro-Slavery man has been arrested*, although Governor Geary and the United States Marshal cannot help but know of crimes and murders, without number, committed by the leaders of that party. Even Geary's militia, after the murdering of David Buffum, passed through Lecompton under a black flag, the emblem of pirates, no one daring to molest them. A large portion of our number have families depending upon our earnings for support, and outstanding crops of great value going to waste, or suffering heavy loss.

We come now, at last, to speak of a subject too immediate, too vital to admit of our passing it unnoticed, yet too full of horror to dwell upon. We allude to our treatment and condition since our confinement here, any description of which must come far short of the terrible reality. A few of our guard will ever be remembered by us with emotions of the deepest gratitude for their kindness, but the greatest portion of them are drunken, brawling demons, too vile and wicked for portrayal. Times without number have they threatened to either shoot or stab us, and not unfrequently have they attempted to carry out their base and hellish threats. Several nights have the guard amused themselves throughout their different watches by cursing us, throwing stones at the house, breaking in glass, sash, etc. Two large cannon stand planted but a few yards from our prison, and two nights has the match been swung several hours in the hands of the gunners, with orders to discharge both, heavily loaded with shot and slugs, upon us, in case our friends should come in sufficient force to avenge our wrongs. These, however, are only slight compared with other insults and sufferings heaped upon us daily. Most of us are poorly clad—few have any bedding. Our prison is open and airy, yet small, and without surrounded by unearthly filth; within all is crawling with vermin—all—everything—mixed with misery. When youths, we listened with doubt to the dark stories of the Jersey prison-ships and the black hole of Calcutta, never dreaming that we should at last be a sad, actual part of their counterpart! More than once have we prophesied to one another that all would not leave this charnel-house alive. Our assertions have been verified. Several have been dangerously sick—one has died. His name was William Bowles, and formerly from St. Charles, Missouri. He labored with us nobly for our God-given rights, and it was with feelings of unutterable sorrow that we parted with him. After an illness of two days, he left his sufferings this morning at one o'clock. Before his death, we requested the officers of the guard to have him removed to a place of quiet.

We talked and became tired, yet nothing was done. Last night all the physicians in town were sent for, and each refused to come. Dr. John P. Wood, who is also Judge of Probate and Committal Justice, could not come, "because he was sick;" yet he was seen that evening, as well as the following morning, doing hard labor. Others had reasons, we know not what. Dr. Brooks was sent for five times; but as he was at a card-table playing poker, he swore he 'would not leave the game to save every G—d d—d Abolitionist in the Territory.' Many thanks, however, are due to Mr. Caldwell, a pro-Slavery man, and marshal of the town of Leocompton, for the kind aid he gave us.

The governor paid us a visit yesterday morning, which is the third since our incarceration. We showed him young Bowles, and told him we feared this was the beginning of an epidemic which would prove fatal to not a few. We showed him our scanty clothing. He said that the grand jury, which was in session all last week, would probably finish its business by night; that all against whom no bills were found would be immediately released; and that although he was going away and should be absent several days, yet he should leave orders that all those retained should be provided with every comfort that could be procured. But the grand jury has not ended its examination, and none can tell when it will. Sickness and death of the most horrid forms are in our midst; the scrapings of the Pandemonium surround us; we can see nothing left us but an appeal to the last tribunal, with God as our judge, and our jury the great American people. We are willing to suffer, if necessary, for the cause of Liberty and of Kansas; but is it necessary? Will you answer to God, and let us hear your decision?"

"NOTE.—Of course, every prisoner whose name is here attached is not *personally* knowing to *every individual statement*; but every statement here made is known by *many* of us to be composed of actual facts, all are satisfied of their truth. To the name of each subscriber is attached his *former* residence:

Vermont.—O. M. Marsh, Woodstock; John L. King, Brattleboro'.

Connecticut.—Alonzo Crawford, Union.

Twenty of these prisoners were convicted in Judge Lecompte's court of manslaughter, the penalty being six years confinement in the penitentiary, or hard labor on the public work, with chain and ball. They were subsequently removed to Tecumseh, from whence a large number escaped, and after a tedious confinement in the prison at Tecumseh, they were all liberated.

The Legislature of Kansas adjourned after having passed a number of important acts. Among these is one defining and punishing the crimes of rebellion against the territorial laws; and

another providing for a convention to form a State constitution. This latter act directs that on the third Monday in June delegates shall be elected to a convention to form a State constitution; all citizens of the United States who have resided three months in the country may vote for delegates; and the convention is to meet on the first Monday in September. Governor Geary vetoed this bill, mainly on the ground that it contained no provision for submitting the constitution to be framed to the judgment of the people; and because he considered the time premature for the erection of Kansas into a State. The Legislature by a unanimous vote passed the bill over the veto of the governor, so that it is now a law. It will be observed that by its provisions no person arriving in the Territory after the 15th of March, can have any voice in forming the State constitution.

Mr. Geary resigned his post as Governor of Kansas. In his farewell address he gave a gloomy picture of the state of affairs in the Territory at the time of his accession. Desolation and ruin reigned on every hand; homes were deserted; the smoke of burning dwellings darkened the air; women and children driven from their habitations, wandered over the prairies, or sought refuge among the Indian tribes. Towns were fortified and predatory bands infested the highways. The laws were null, the courts naturally suspended, and the civil arm was almost powerless. The treasury was bankrupt, the appropriations made by Congress for a year being insufficient to meet the expenditures of a fortnight. To remedy these evils he had labored incessantly. His health had given way, and he had made large advances from his own private funds, without any assurances of reimbursement. Though he had met with obloquy and opposition, he was conscious that he had always sought to do equal and exact justice to all. He had eschewed all sectional disputations, kept aloof from party affiliations, and scorned alike threats of personal violence and promises of advancement and reward. He was so well satisfied with the course he had pursued that he would not now, were it in his power, change it in the slightest particular. The country had been pacified, and indications of peace and prosperity were everywhere to be seen.

In conclusion, he pays a high compliment to General Persifer F. Smith, and the military force under his command, for the manner in which they have performed their duties. The vacancy occasioned by this resignation, has been filled by the appointment of Hon. Robert J. Walker as Governor of the Territory. In his letter of acceptance, addressed to the President, Mr. Walker says, that although he at first declined the post, he reconsiders his determination, in consequence of the opinion advanced by the President that the safety of the Union may depend upon the selection of the individual to whom shall be assigned the task of settling the difficulties which again surround the Kansas question. He understands that the President and Cabinet concur with him in the

opinion that the actual *bona fide* residents of Kansas, by a fair and regular vote, unaffected by fraud or violence, must be permitted, in forming a State constitution, to decide for themselves what shall be their social institutions. He contemplates an appeal, not to a military force, but to the intelligence and patriotism of the whole people of Kansas, by a majority of whose votes the determination must be made. If the decision of the majority be not acquiesced in, he sees in the future of Kansas only civil war, extending its baneful influence over the whole country, subjecting the Union itself to imminent hazard.

The Free State convention assembled at Topeka on the 10th of March, 1857, and passed resolutions denouncing the Legislative Assembly, and the bill passed by it, calling a constitutional convention; declaring that the people could not participate in the election of delegates to this convention "without compromising their rights as American citizens, sacrificing the best interests of Kansas, and jeopardizing the public peace." This body affirmed that the State constitution framed at Topeka was the choice of the majority of the people, and urged its immediate acknowledgment by Congress. The principle of "Squatter Sovereignty" was also unequivocally indorsed.

Governor Walker, in his inaugural address, assures the people of Kansas that the constitution framed by the convention shall be submitted to the actual residents of the Territory for ratification or rejection; and he further asserts, that "Congress ought not, and will not admit Kansas into the Union, unless she presents herself with a constitution which has been ratified by the actual residents of the Territory." This address of Governor Walker has created no little dissatisfaction among the ultraists of the South, and the pro-Slavery men in Kansas; and the convention, which is strongly pro-Slavery, will, it is asserted, bring their constitution before the first session of the next Congress, demanding the admission of Kansas as a Slave State.

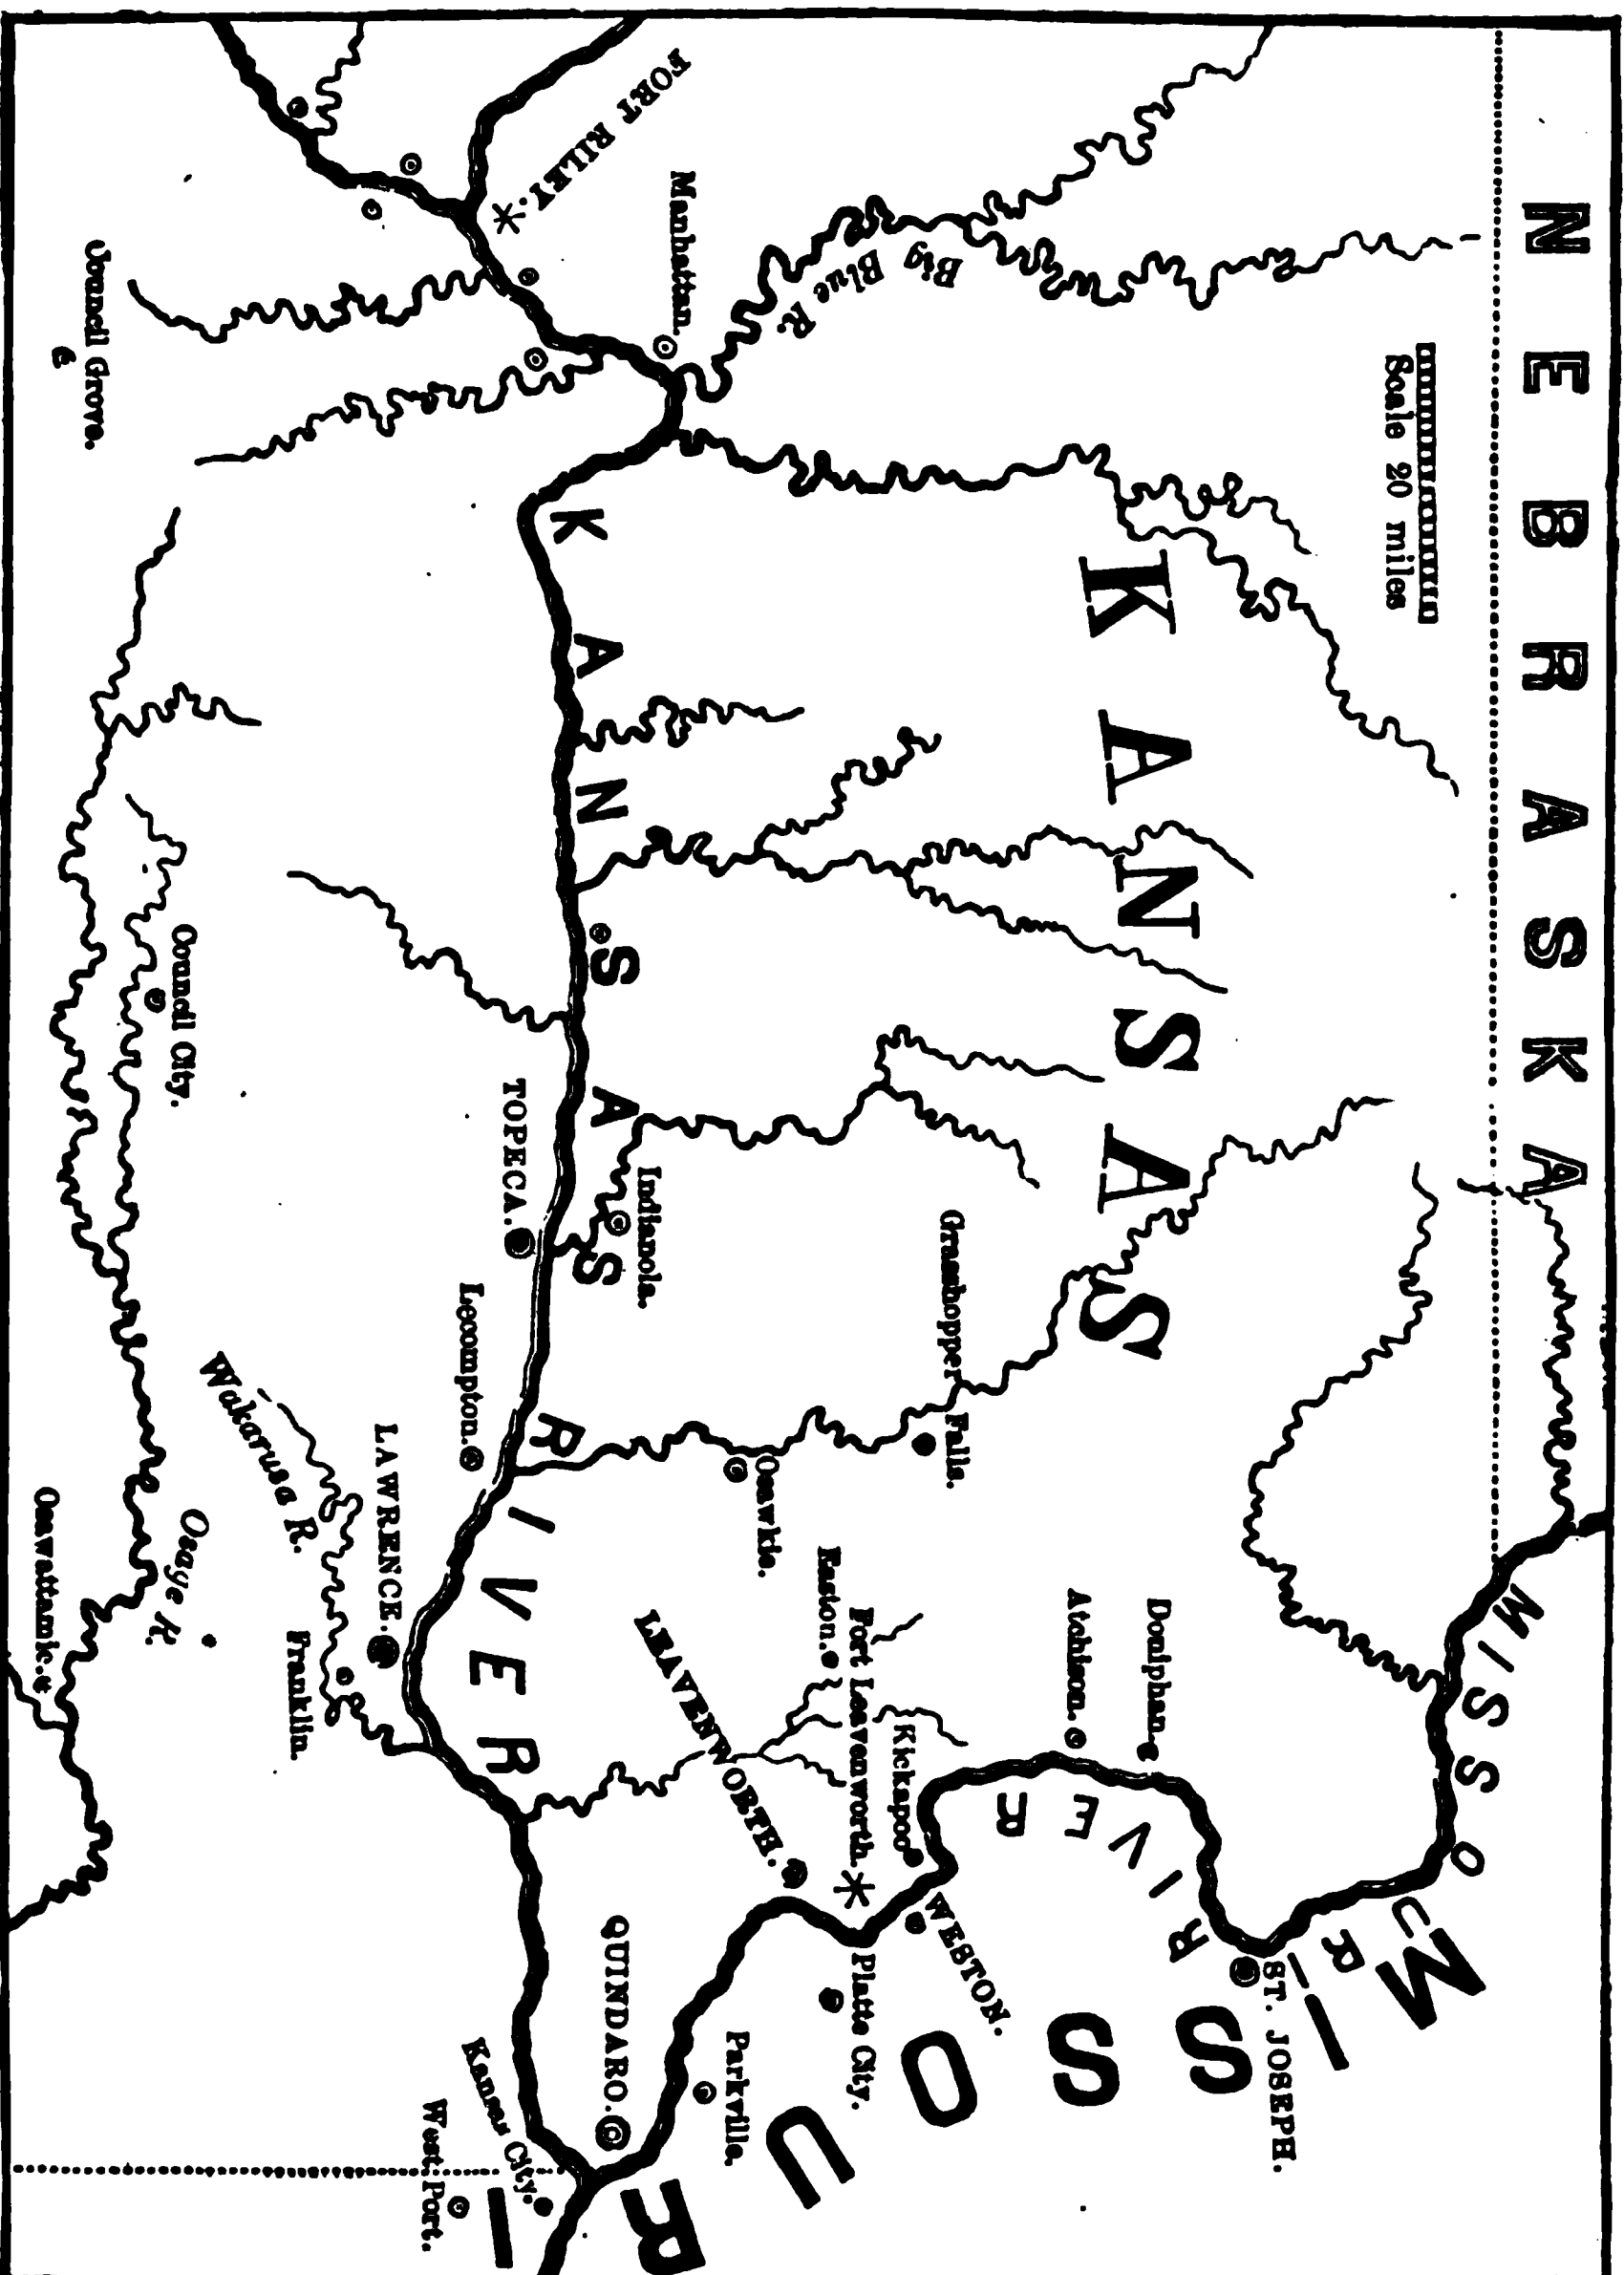

When the Kansas bill passed, it was the universal sentiment of the Democratic party, that the people of that Territory should decide for themselves whether Kansas should be a Slave or a Free State. If they adhere to this doctrine, there is little doubt as to the result; for it is admitted by all parties that of the actual residents of the Territory, not one in ten is in favor of Slavery. This large preponderance of Free State men in the Territory, together with the adherence of Governor Geary, of Governor Walker, and a large portion of the Democratic party, to the principle of Squatter Sovereignty avowed in the Kansas bill, must, in despite of every obstacle, render the day not very distant when Kansas will be added to the Free States of our Union.

In view of all the circumstances of the struggle in Kansas, conservative men North, and conservative men South, cannot but regret that any occasion should have arisen to weaken the attachment of our people to the Union; but it is believed that this evil

.....

Scale 20 miles

is only temporary, and that the day is not distant when these sectional feelings will be dispelled in the swelling tide of a universal patriotism for our common country—our country, whose liberties were established by the willing sacrifice of the blood and treasure of its people everywhere; whose prosperity is the hope and the prayer of the wise and the good over the whole world; and whose institutions, founded on the principle of the greatest good to all, are such that every citizen, in whatever clime he may wander, has reason to look back with pride to his native land, as he reflects, "that he too is an American."

THE LAKE SUPERIOR COUNTRY.

LAKE SUPERIOR presents an area of 32,000 square miles. Its greatest length is four hundred miles. Its greatest breadth, from Grand Island to Neepigon Bay, is one hundred and sixty miles. The surface of the lake is six hundred feet above the level of the Atlantic Ocean; but its bottom is three hundred feet below; for it has a mean depth of nine hundred feet. The French, who were the first explorers of Lake Superior, fancifully described it as a watery bow, of which the southern shore was the string, and Keweenaw Point the arrow. The lake discharges through the St. Mary's Strait into Lake Huron. The strait is about seventy miles long, but it is divided into two sections by the Falls of St. Mary, fifteen miles below Lake Superior. The lower section is navigable for small steamboats, and vessels drawing six feet of water. This section contains four large islands and several smaller ones; but the principal channel—the westerly one—is nearly a mile in width. The Falls of St. Mary, or more properly rapids, are three-fourths of a mile in length, having a fall in that distance of twenty-one feet and ten inches. The two sections are now united by a steamboat and ship canal.

Following along the indentations of the southern shore, around the westerly extremity of the lake, to Arrow River, opposite to Isle Royale, will give the extreme length of the American coast, which cannot be much less than 1,000 miles; a part of which is in Michigan, part in Wisconsin, and part in Minnesota. Lake Superior is walled in by rocks, which, in some places, are piled in mountain masses upon the very shore. The waves dash against precipices and beetling crags, that threaten the unfortunate mariner, in a storm upon a lee shore, with almost inevitable destruction. There is tolerable anchorage at the head of St. Mary's Strait. Keweenaw Point has two sheltering bays, viz: Copper Harbor and Eagle Harbor. Protection may be found from the surf under the ice of the Apostle Islands, at La Pointe. St. Louis River, at the head of the lake, is a good harbor; but the best harbors are afforded by the indentations of the shores of Isle Royale.

‘Owing to the lofty crags which surround Lake Superior, the winds, sweeping over the lake, impinge upon its surface so abruptly as to raise a peculiarly deep and combing sea, which is extremely dangerous to boats and small craft. It is not safe, on this account, to venture far out into the lake in bateaux; and hence voyagers generally hug the shore, in order to be able to take land in case of sudden storms. During the months of June, July and August, the navigation of the lake is ordinarily safe; but after the middle of September, great caution is required in navigating its waters; and boatmen of experience never venture far from land, or attempt long traverses across the bays. The boats are always drawn far up on the land at every camping-place for the night, lest they should be staved to pieces by the surf, which is liable at any moment to rise and beat with great fury upon the beaches.’

One of the most curious phenomena of the lake is the sudden and inexplicable heaving and swelling of its waters, when the air is still. Mr. Schoolcraft, who passed over Lake Superior in 1820, thus describes it: “Although it was calm, and had been so all day, save a light breeze for a couple of hours after leaving the Ontonagon, the waters near the shore were in a perfect rage, heaving and lashing upon the rocks in a manner which rendered it difficult to land. At the same time scarce a breath of air was stirring, and the atmosphere was beautifully serene.”

Another noticeable feature of Lake Superior is the extraordinary purity and transparency of the water, through which every pebble may be distinctly seen at the depth of twenty-five feet. When out in a canoe upon its surface, the frail vessel does not seem to be afloat upon a watery element, but suspended in mid-air, with etherial depths around and below. Those who have visited Lake George—the world-famous Horicon, whose waters were at one time carried to Rome to fill the papal fonts—and Lake Superior, affirm that the latter far surpasses the former in clearness and transparency. Indeed, they assure us that often, while looking down from the height at which the boat seems suspended; the head will grow dizzy, and a feeling of faintness will be superinduced.

Not less peculiar is the atmosphere around and over the lake, which plays strange and fantastic tricks in the face of high heaven, seeming to possess a life and spirit strictly in unison with the wonderful expanse of waters that lies spread out below. The *mirage* of Lake Superior fills the spectator with astonishment. For weeks during the summer, the traveler along the shores of this inland sea may be gratified by a view of the most curious phantasmagoria—images of mountains and islands being vividly represented in all their outlines, with their tufts of evergreen trees, precipices, and rocky pinnacles, all inverted in the air, and hanging high over their terrestrial originals, and then again repeated upright in another picture directly above the inverted one. Rock Harbor, in Isle Royale, is the most noted locality for observing these phantasmagoria. But the *mirage* is not confined to any particular part of

We talked and became tired, yet nothing was done. Last night all the physicians in town were sent for, and each refused to come. Dr. John P. Wood, who is also Judge of Probate and Committal Justice, could not come, "because he was sick;" yet he was seen that evening, as well as the following morning, doing hard labor. Others had reasons, we know not what. Dr. Brooks was sent for five times; but as he was at a card-table playing poker, he swore he 'would not leave the game to save every G—d d—d Abolitionist in the Territory.' Many thanks, however, are due to Mr. Caldwell, a pro-Slavery man, and marshal of the town of Leocompton, for the kind aid he gave us.

The governor paid us a visit yesterday morning, which is the third since our incarceration. We showed him young Bowles, and told him we feared this was the beginning of an epidemic which would prove fatal to not a few. We showed him our scanty clothing. He said that the grand jury, which was in session all last week, would probably finish its business by night; that all against whom no bills were found would be immediately released; and that although he was going away and should be absent several days, yet he should leave orders that all those retained should be provided with every comfort that could be procured. But the grand jury has not ended its examination, and none can tell when it will. Sickness and death of the most horrid forms are in our midst; the scrapings of the Pandemonium surround us; we can see nothing left us but an appeal to the last tribunal, with God as our judge, and our jury the great American people. We are willing to suffer, if necessary, for the cause of Liberty and of Kansas but is it necessary? Will you answer to God, and let us hear your decision?"

"NOTE.—Of course, every prisoner whose name is here attached is not *personally* knowing to *every individual statement*; but every statement here made is known by *many* of us to be composed of actual facts, all are satisfied of their truth. To the name of each subscriber is attached his *former* residence:

Illinois.—Thomas Hankins, Dover; Aaron D. Ray, Linden; Thomas Leeson, Rock Island; J. G. Ketcham, Bloomington; G. N. Neff, Bloomington; Absalom V. Vickers, Bath; J. W. Jordan, Ogle County; A. S. Gates, Hamilton; John W. White, Farm Ridge; Thomas J. Aliff, Carlisle; Gilbert Tower, Goodall; Isaac Gray, Chicago; George Smith, Winnebago County; Wm. H. Gill, Elizabeth; Adam Bauer, Schuyler County; William Cline, Peoria; James Conley, Half-Day; P. Stevens, Bloomington; A. M. Humphrey, Bristol; C. Hay, Oswego; Jesse F. Pyle, Schuyler County.

Ohio.—J. H. Kagi, Bristolville; S. Voglesong, Hanoverton; H. H. Easter, Highland County; Edwin R. Fally, Mount Gilead; Thomas Bowers, Chillicothe; Josiah G. Fuller, Oberlin; J. T. Yunker, Warsaw; Thomas W. Porterfield, *an old soldier under Jackson, aged seventy-two*; A. J. Payne, Cleveland; William L.

corresponding with lines of the mountain upheaval—we observe occasionally rude crags detached from the main body of the mountains, and in one place two lofty twin towers, standing on a hill-side, and rising perpendicularly, like huge chimneys, to the elevation of seventy feet, while they are surrounded by the deep-green foliage of the primeval forest.

In the secluded valleys between the hills of the Isle Royale there are either little lakes, or swamps filled with a dense growth of white cedars. Upon the higher lands, the timber is a mixture of maple, birch, spruce, fir and pine trees, which are of thrifty growth, and will afford both timber and fuel. The soil of more than nine-tenths of the island is formed by the decomposition of the trap rocks, and such a soil is well known to be warm and fertile. In the lowlands, the springs from the hills will keep the soil cold and wet; but if properly drained, there is no doubt those lands might be cultivated, and would produce good crops. Indeed, this is said to have been proved in the vicinity of Rock Harbor, where the lowland soil, which was originally covered with swamp-muck, is now drained and made productive.

Rock Harbor, on the southern side of the northeasterly end of Isle Royale, is the largest and most beautiful haven on Lake Superior. The bay extends about four miles up into the island. The water is deep enough for any vessels, and the harbor is perfectly sheltered from every wind. Around its entrance are numerous islands, that stand like so many rocky castles to break the heavy surges of the lake. "In some respects it resembles the Bay of Naples, with Procida, Capri and Ischia at its entrance; but no modern volcano completes the background of the picture, though there must at one time have been greater eruptions there than ever took place in Italy."

Lake Superior is fed by about eighty streams, which are represented to be not navigable, except for canoes, owing to the falls and rapids with which they abound. The principal ones that flow through American territory are the St. Louis, Montreal, Presque Isle, Arrow, Little Montreal, Ontonagon, Eagle, Sturgeon, Huron, Dead, Carp, Chocolate, La Prairie, Two-hearted and Tequamenon Rivers. The largest of these are the Ontonagon and Sturgeon Rivers, which, by the removal of some obstructions at their mouths, and the construction of piers to prevent the formation of bars, might be converted into excellent and spacious harbors, in the immediate vicinity of some of the most valuable mines, where the want of safe anchorage is now severely felt.

The Twin River, or Two-hearted River, as it is called by the traders, consists in the union of two separate streams near the point of its outlet. It empties into the lake seventy-two miles westward of St. Mary's. A short distance beyond Grand Island, at the mouth of a small stream known as Laughing-fish River, a curious flux and reflux of the water is maintained, similar to the tides of the ocean. At the mouth of Chocolate River, there is a

large bay setting up deep into the shore, which requires a day's canoe-travel to circumnavigate it. Just beyond that, the traveler will first strike the old crystalline rocks, or primitive formation. From hence, for two days' travel to Huron Bay, the shores present a continuous series of rough, conical peaks, which are noted for immense bodies of iron ore, chiefly in the condition of iron glance, from which the extensive iron works of Carp River, seated at the foot of these mountains, are yielding such fine blooms. Continuing on westward across Keweenaw Bay, the canoe voyager will enter Portage Lake, embosomed near the base of Keweenaw Point, and, with a short portage, will reach the lake west of the point without the toil and distance of circumnavigating it. And, in doing so, he will observe that the geology of the country has become entirely changed. He will have passed into the midst of a region of trap-dike—the great copper-bearing rock of Lake Superior. Passing onward along the lake, the dim-blue outlines of the Porcupine Mountain will rise to view on the edge of the horizon, directly ahead. These mountains, on a clear day, may be seen from a distance of sixty miles. Soon the voyager will be seen traversing the entrance of Little Salmon, Graverod, Misery and Firesteel Rivers, to the mouth of Ontonagon River, where a large body of water enters the lake; but the mouth of the river is very much obstructed by a sand-bar. There likewise may be observed another of those curious refluxes, where the water, impeded and dammed up by gales, reacts with unusual force.

In crossing the St. Mary's Strait, from Point aux Pins to Point Iroquois, the first view of Lake Superior is to be had, affording one of the most pleasing prospects in the world. The St. Mary's River passes out of the lake between two prominent capes, viz: Gros Cape and Point Iroquois. The former rises up in high, barren peaks, of hornblende rock; the latter consists of elevated masses of red sandstone, covered with a dense forest.

The La Grand Sables is an interesting feature of the lake coast. The shore consists of several heavy strata of the drift era, reaching a height of two or three hundred feet, with a precipitous front on the lake. The sands, driven up by the waters, are blown over these heights, forming a heavy deposit. It is this sandy deposit, falling down the face of the precipice, that appears to convert the whole formation into dunes, whereon the sandy coating rests like a veil. The number of rapacious birds which are observed about these heights, adds to the interest of the prospect.

The pictured rocks of Lake Superior will always attract the attention of the tourist. That coast of rocks is twelve miles in length, consisting of a gray sandstone, and presenting perpendicular walls, which have been worn by the waves into pillared masses and cavernous arches. These caverns yawn into the face of the cliff, and the winds howl, and the waves roar around their mouths. A small river leaps from the top of the precipice clear into the lake. At one place the "Doric Rock," a vast entablature,

rests on two immense water-worn pillars. At another place, the precipice has been completely undermined, so that it rests solely on a single massive column, standing in the water. The dark-red clay, overlaying the rocks above, has been washed by the rains down the face of the precipice; and, being blended with the sand and dust blown about by the winds, presents a pictorial appearance. Schoolcraft says: "We almost held our breath in passing that coast."

The Ontonagon River, for four miles up from its mouth, is broad and deep, having a gentle current, flowing through a winding channel, between banks that are heavily wooded, the dark-green foliage overhanging the water. A long; narrow island divides the river into two channels, through which the current flows slowly and tranquilly to the lake. The stream above is broken by frequent rapids.

The Montreal River forms the boundary between Michigan and Wisconsin. It presents many attractions for the admirers of picturesque scenery, and exhibits the most beautiful waterfalls anywhere to be found along the entire coast of Lake Superior. A little way above its mouth, and within sight of the lake, the red sandstone rocks have a northerly dip of seventy degrees; and over this ledge the river is precipitated eighty feet, into a deep circular basin, the sides of which have been excavated by the rushing waters into a spacious amphitheater. About three miles further up the river, in a direct line from the lake, is a second waterfall, said to be fully as beautiful as the first.

Sturgeon River rises in the country to the south of the head of Keweenaw Bay; and, running northerly, empties into Portage Lake. This lake is connected with Superior by Portage River, which may be ascended by vessels drawing eight feet of water, and to the head of the lake, twenty miles inland. Those streams, together with the Montreal River, are famous for their sturgeon fisheries. All the rivers that flow into Lake Superior, at a little distance inland, become very rapid, broken by frequent waterfalls, furnishing water-power in great abundance. The heights of land between Portage Lake and Montreal River vary from 600 feet to 1,300 feet in height.

The Superior country is celebrated alike for its iron, its copper, and its silver. It can never become much of an agricultural country; but its mineral resources are very great, beyond the power of calculation. The country has been explored just sufficiently to enable us to form a mere rough guess as to its capability of producing the most valuable metals in constant use by man. The iron occupies a region distinct by itself. The copper and silver are found blended together.

The iron region is the most valuable and extensive in the world for the manufacture of the finer varieties of wrought-iron and steel. When we consider the immense extent of the district, the mountain masses of the ore, its purity and adaptation to the manufac-

ture of the most valuable kinds of iron, and the immense fields which cover the surface, suitable for charcoal, this district is pronounced unrivaled. The ore consists mainly of the specular peroxide of iron, an admixture of the fine-grained magnetic iron ore. In some instances, the whole ridge or knob appears to consist of a mass of pure ore—so pure that no selection is required; but in unlimited quantity might be quarried or picked up in loose layers around the slopes. In others, the ore is mixed with seams of quartz or jasper, which renders it less valuable, and requires care for the selection. The iron, in such cases, presents a banded or contorted structure, or alternating seams of steel-gray and brilliant red. The appearance of a mountain cliff thus made is extraordinary. The iron mountain of Missouri becomes insignificant when compared with these immense deposits.

The surveyors report some good agricultural lands in the district, which will become of great value when the rivers have been opened, and a mining population introduced, creating a sure and convenient home-market for the productions of the country.

Next in importance after the iron is the copper of the Superior country. The region where that metal is found is along the southern shore of the lake.

The rocks of the copper region have been elevated to an angle of about forty degrees, inclining to the northwest by the forces that injected the molten copper throughout their cracks and crevices. Along the hillsides, where, by reason of this elevation, the rocks are made to out-crop the superincumbent masses of decayed rock, and other accumulations, have been washed away by the action of torrents; and the metal, in places, appears at the surface. Some of those points, where copper is thus exposed, would seem to have attracted the attention of the Indians, long before any white man ever trod the bleak, sterile shores of Lake Superior. Along the banks of the Ontonagon River have been found the ancient mines, to which the tribes must have resorted for a supply of copper for the manufacture of tools and ornaments. The metal was very highly valued by them; and pieces of native copper were treasured up with great care, and used as an article of traffic. It is evident that the aboriginal miners were not more advanced toward civilization than the Indians generally; because the mining and other implements, found on the Ontonagon in the ancient excavations, are precisely similar to those which are known to have been in use among the tribes of the Atlantic coast. The stone-hammers, of oval pebbles, grooved about the middle for withes, which formed the handles, were the native instruments for breaking out the copper on Lake Superior, and for breaking the hard rock of Moose-head Lake for the arrow and spear-heads of the Indians. Such hammers, together with half-finished stone mining-knives, have been found both at Ontonagon and at the Ontonagon River. The Indian miner also assisted the operation of breaking

SAN FRANCISCO, CALIFORNIA.

the rocks by kindling fires upon them; and hence the origin of the charred brands and coal that have been found around the battered and beaten projections of copper.

The Lake Superior was greatly revered by the Indians inhabiting its shores at the time of the early explorations of the Jesuit missionaries. Claude Allouez says respecting this superstition: "The savages respect this lake as a divinity, and make sacrifices to it, on account perhaps of its magnitude, for it is two hundred leagues long and eighty wide; or on account of its goodness in furnishing them with fishes, which nourish all these people, where there is but little game. There are often found beneath the water pieces of copper, all formed, and of the weight of ten and twenty pounds. I have seen them many times in the hands of the savages; and, as they are superstitious, they keep them as so many divinities, or as presents from the gods beneath the water, who have given them as pledges of good fortune. On that account, they keep the pieces of copper enveloped among their most precious furniture. There are some who have preserved them for more than fifty years, and others who have had them in their families from time immemorial, and cherish them as household gods."

The first Englishman that ever visited the copper region was Alexander Henry, who, after having his hair almost started out of his head at the frightful massacre of Michilimackinac, continued in the Superior country for several years, poking about among its ravines and precipices with a most refreshing indifference to danger. One or two extracts from his journal will show what he saw there.

"On the 19th of August, 1765, we reached the mouth of the Ontonagon River, one of the largest on the south side of the lake. At the mouth was an Indian village; and three leagues above, a fall, at the foot of which sturgeon, at this season, were obtained so abundant, that a month's subsistence for a regiment could have been taken in a few hours. But I found this river chiefly remarkable for the abundance of virgin copper, which is on its banks and in its neighborhood.

"On my way back to Michilimackinac, I encamped a second time at the mouth of the Ontonagon River, and now took the opportunity of going ten miles up the river with Indian guides. The object for which I most expressly went, and to which I had the satisfaction of being led, was a mass of copper of the weight, according to my estimate, of no less than five tons. Such was its pure and malleable state, that, with an ax, I was able to cut off a portion weighing a hundred pounds. On viewing the surrounding surface, I conjectured that the mass, at some period or other, had rolled down the side of a lofty hill which rises at its back." This copper rock has been removed to Washington, and may now be seen lying on the ground near the War Department.

That same enterprising explorer was also the first to organize a Lake Superior Mining Company. In 1770, Messrs. Baxter,

Bostwick and Henry built a barge at Point aux Pins, and laid the keel of a sloop of forty tons. They were in search of gold and silver, and expected to make their fortunes. The other partners in England were "his royal highness, the Duke of Gloucester; Mr. Secretary Townshend; Sir Samuel Tucket, Bart.; Mr. Baxter, counsel of the Empress of Russia; and Mr. Cruikshank. In America, Sir William Johnson, Bart.; Mr. Bostwick; Mr. Baxter, and myself. A charter had been petitioned for and obtained; but, owing to our ill success, it was never taken from the seal-office." Mr. Baxter sold the sloop and other effects of the company, and paid its debts, which certainly was a most commendable feature of their operations. Lake Superior seems then to have been abandoned, and its mineral resources forgotten.

Since 1845, public attention has been again drawn toward the Superior country. Its mineral lands have been surveyed, affording tolerably accurate information of the localities where the ores of copper, and iron, and silver abound. A large number of mining companies have been organized, and some of them have gone into successful operation. It has been stated that there are forty-one companies carrying on mining operations at Keweenaw Point alone, among which are the following: Northwest, Siskowit, Algonquin, Piscataqua, Ontonagon, Bohemia, Chesapeake, and Cade.

At the Lake Superior Company's mines, shaft No. 2, passing into the western side of the vein, was very rich in copper and silver at the surface, where it immediately bordered upon the leader, and impoverished as it left it in descending. So after working downward for a time through a barren rock, the miners sent off a level toward the river, with the intention of striking the vein under the stream; but, to their great surprise, opened into a deep and wide ravine, or ancient channel of the river, filled with great masses of copper, lumps of copper and silver mixed, small globules of pure silver, all rounded and worn by the action of running water, and mixed with sand, gravel and pebbles. A single mass of silver was obtained from this ravine, which weighed more than six pounds, and was worth \$130. That lump of silver is now in the cabinet of the United States Mint, at Philadelphia. Masses of copper were also found in that ravine, weighing 1,000 pounds. These were exported to France.

The Cliff Mine, belonging to the Boston and Pittsburgh Mining Companies, is situated on the southwest branch of Eagle River, three miles from the office of the Lake Superior Company. This mine is one of the most remarkable known, for the enormous masses of native copper it contains.

At the Copper Falls' Mines, about two hundred feet above the level of the lake, the shafts descend perpendicularly into the rock nearly to that depth. There is a vein of solid copper. The sheets of copper are of amazing dimensions.

The largest mass of copper that has yet been removed was at

the bottom of the Cliff Mine, and was estimated to weigh eighty tons. It was pure copper, having a density equal to that of the hammered copper of commerce, and much tougher than that which is obtained by artificial smelting.

To get out such huge masses of copper, a place is sought in the shaft where a hole may be bored into the rock, and then firing a heavy blast. This starts the copper from the wall of rock, and sometimes removes it entirely. It is then cut up with chisels. This vein varies from two to four feet in width, and increases in width and richness as it descends in the rock. The height of the cliff in which this vein is seen is nearly three hundred feet, and the upper exposure of the veins two hundred and thirteen feet. The top of the cliff is seven hundred feet above Lake Superior.

The great national value of the copper mines of Lake Superior will be seen by comparing their capability for the production of metal with other copper mines in different parts of the earth. The following table exhibits the foreign mines, together with the annual yield of metal:

Sweden.....	1,000 tons.
Russia.....	2,000 "
Hungary	2,000 "
Hartz Mountains.....	212 "
East Germany.....	143 "
Hesse.....	500 "
Norway.....	7,200 "
United Kingdom of Great Britain.....	14,465 "
Mexico	200 "

The principal landing-place on Keweenaw Point, to get access to the mines, is Eagle Harbor. The village occupies a beautiful site. The houses are built on the rising ground, in a magnificent grove of Norwegian pines. The harbor is a fraction less than a mile wide; the greatest depth of water, one hundred feet; depth on the bar, ten feet; and there it can be easily deepened to sixteen feet by blasting away the rocks. This ought to be done for the safety of loaded steamboats, which frequently take shelter in the bay.

The Superior country is quite destitute of game; but the waters abound in fish of the choicest kinds. The streams throughout the iron region are alive with speckled trout. The lake fisheries will one day rival those of the ocean, both in extent and value. Isle Royale is a favorite place of resort for fishermen, who take there great numbers of the siskowit—the fattest and finest variety of the lake-trout family; also, lake-trout and white-fish. The siskowit has been known to attain to the weight of twenty-five pounds, and the lake-trout fifty pounds. The siskowit has only to become introduced into the eastern market, to take the place of all other fish, as a delicacy for the table of the epicure. The capability of the fisheries of the Superior country may be estimated by the quantities taken at one place, near Mackinaw, at which 10,000 barrels

are packed annually. The preparations for packing are very simple. After being cleaned, the fish are laid, with the scales on, upon broad benches, and salted; then thrown into a box or crate with a grating at the bottom to drain. Sometimes a common wagon-wheel is used, suspended by a rod passing through the hub; the water passes off from the fish between the spokes. After draining, the packing commences. Fish are important articles of food at the mines, and will continue to become more valuable as the business of mining increases.

The Superior country is a healthy country; but the climate is too cold and forbidding, and the winters too long, to attract emigrants, who prefer to cultivate the soil. In July, the days are very warm; the nights, however, are cool. The changes in the temperature are very sudden and very great. It is no uncommon thing for the thermometer to fall forty degrees in twenty-four hours. Frosts occur about the 10th of September sufficient to kill all vegetation. The snows attain to the depth of six feet and remain to the last of May. Winter sets in early in October. During the fall months there are frequent and terrible gales of wind, and storms of rain and snow.

The Superior country will one day be erected into a Territory by itself, or admitted as a State. It will be, for all time, not only a mine of wealth to the Union, but also a nursery of a tough, hard and energetic race of men. The full development of its vast resources would require a population that will make it the great northern hive of America.

THE PACIFIC RAILROAD.

A SHORT generation ago, the people of the United States were astonished at learning that a successful attempt had been made in England to transport passengers and merchandise over land by means of steam; Manchester and Liverpool had been united by iron bonds. A great fact had thus been achieved in the progress of material civilization. The first step had been taken toward revolutionizing the intercourse and the business of the entire earth; and thenceforth the work of linking together the dispersed communities of mankind was to go on until the remotest East and the far-off West should be brought near to every man's door. Early in the strife to reap profit from this new field of successful enterprise, were a few adventurous and far-seeing Americans. Long before the community at large had settled in its own mind what kind of a thing a railroad might be—whether it was something built up over the tops of the houses, or something else sunk beneath the ground—these men had set to work the laborers of Connaught and the laborers of Munster, spade in hand, to filling up the valleys, and leveling the hills, that intervened between New York and Philadelphia. In a few months, the industrious hands of a small army of Irishmen had accomplished the task; the narrow tracks had been leveled; bridges, aqueducts and culverts had been constructed; rails of wood and rails of iron had been laid and securely fastened; and the great iron horse, with his insatiable maw, and with his strength that never tired so long as that maw was filled, was hauling along gigantic loads of admiring men and of bulky freight at a pace that nothing short of the whistling winds could equal. In this way, the great British *fact* became also an American fact, small indeed in its beginning, but destined indeed to grow in less time than it takes for a child to become a man—to a stature that would surpass all that the world beside would achieve. Most creditable, in truth, it is to American enterprise, that her comparatively small population of twenty-eight millions of souls should, with her small resources of money and capital, have constructed and placed in successful operation more miles of railway than all the rest of the world; yet this has been done, and well done.

Wherever there is found anywhere over our broad land a thriving population of freemen, there is also found the newspaper, the school and the church, and with these there necessarily grows up the knowledge of what is being done elsewhere, and the temper of mind to profit by whatever is adapted to their own circumstances and wants. The result of this is, that the country is rapidly filling

up with railways, crossing and recrossing each other at all points and uniting almost every county of every Free State with the great centers of trade and commerce both on the Atlantic coast and on all our navigable rivers and lakes.

A project, however, more gigantic than any that has yet been achieved in the world's history, is now agitating the world's mind, and drawing toward itself the favorable regards of the more prudent and cautious, as well as those of the sanguine and adventurous. Already the feasibility of constructing a railroad across the continent, which shall unite the waters of the Pacific with those of the Atlantic, is admitted. On this point public sentiment has formed its judgment and pronounced its decision. It can and it must be done. But upon the further question of the route to be pursued by the new road, the judgment of the country is far from being settled. Each of four great routes has its earnest advocates. Some regard a survey from Chicago to the head of the Strait of De Fuca, whose most northern limit is less than a hundred miles from the British colonial possessions, as the most natural, the cheapest and every way the best route for the proposed road. Others again pronounce such a location wholly impracticable, from the masses of snow which must accumulate in the mountain passes in so northern a latitude, and look for an eligible route from the city of Houston, in Texas, to San Diego on the Pacific, the southern limit of which road would pass for some distance through the Territory of Mexico. Between the extreme limits of these two routes, a distance of almost a thousand miles intervenes. Two other routes have also been advocated by their friends—one from St. Louis to San Francisco, and the other from Memphis to the same city. Although other lines have, from time to time, been mentioned, yet these four may be regarded as the great routes from which public sentiment, when more instructed as to their respective merits, must elect one to become the recipient of such public bounty as may be bestowed upon the opening of a great thoroughfare from the Pacific to the Atlantic. The first point to settle, in determining the most eligible route for the proposed road, is as to which one of the different harbors on the Pacific is best fitted by nature and position to become the terminus of such a road, and a proper depot for the immense trade which must ensue on its completion. But four places on the coast are at all fitted to enter into competition for the great prize. These four points are San Diego, in the extreme southwest corner of the United States; the city of San Francisco; some spot to be chosen on the navigable waters of the Columbia, in Oregon; and another on the borders of the Strait of De Fuca, in the new Territory of Washington, and in the extreme northwestern corner of the American Union.

Whatever calculations are made as to the most desirable location of the contemplated road, they must necessarily have primary reference to the great commercial cities on the Atlantic coast. Already there are lines of steam travel extending from each of

these cities to the great cities on the Ohio and the western lakes. The Pacific Road will, in reality, be nothing more than a prolongation of one of these lines across the Rocky Mountains to the ocean. In determining the particular direction of this extension of railroad travel and traffic, certain leading considerations must be taken into the account, upon the settlement of which its final decision must rest. Among these considerations, we may regard the following as of paramount importance: the character of the harbor where the road may terminate; the comparative ease and cheapness with which the road may be built in the different routes proposed; the relative length of these roads; their exemption from liability to injury and delay in consequence of freshets or heavy falls of snow; the fertility and general productiveness and resources of the intermediate country; and their position with reference to the cities and towns which now are or ultimately will become the great centers of western trade.

The selection of a harbor on the Pacific for the terminus of the road, which shall unite the advantages of ocean with the capacity to receive the shipping of half a world, is too obvious to need remark. Whenever the road shall be built, the course of active commerce will be wholly revolutionized.

Instead of the weary months of travel around the capes of Africa and South America, less than a month will suffice to transport the teas and silks of China, the coffee and the spices of Java or Ceylon to the great Atlantic cities, thence to be distributed as from the world's depot to the nations of Europe. But not only will this new mode of transit take to itself the best and most remunerative part of the traffic now existing between Eastern Asia and Christendom, but it will also create a new traffic, compared with which the trade now existing will bear almost no comparison. Instead of here and there a seaport in China holding commercial relations with America, this nearness of access to the best markets of the world will stimulate into an unprecedented activity the rearing of all agricultural products, the manufacture of all goods and wares, and the disinterring of all mineral resources which the three hundred millions of China can furnish us at a cheaper rate than we can obtain them elsewhere. Japan, with a population almost double our own, now shut out from all intercourse with the rest of the world, must soon be forced by the strength of circumstances, to welcome to her ports the merchant fleets of other nations, anxious and eager to distribute to the wide world the rich products of her soil, her climate and her domestic industry. The tropical fruitfulness of the over-populated islands of the Eastern Archipelago will also pour, in increased abundance, the rich spices of her balmy breezes through this new and rapid conduit of trade. Much too of the traffic which has given to a corporation of London traders the rule of more than a hundred millions of effeminate Hindoos, and the ownership of territories larger than the Macedonian conqueror could boast in the time of his greatest achieve-

ments, will likewise be forced by an authority more imperious than that of Alexander—the imperiousness of commercial necessity—to become a tributary to this great trans-continental railway. By a most singular combination of circumstances, that cannot fail to impress a devout mind with the conviction that the Creator of the universe exercises a special control over the destinies of nations, the Pacific coast of America has suddenly assumed an importance which promises to revolutionize the destinies of the entire continent. Diplomacy on the North and conquest on the South have united to the American confederacy a Pacific sea-coast of great length and value. The northern acquisition of Washington and Oregon gives us one of the richest agricultural countries of the world, whose resources, when developed, will be sufficient to feed the vast commercial, manufacturing and mining population which are ultimately to make this coast one of the great centers of the world's industry. The golden sands and rocks of California, over which the steps of Indian and Spaniard and mongrels of every breed have stupidly or heedlessly roamed for many generations, ignorant of the untold wealth which lay strewn in their path or glistened in the early sun, have forever passed from under the control of their old proprietors, into the hands of those who know how to build up prosperous towns and flourishing cities out of the soil which before was thought hardly sufficient to support a scanty population of cattle feeders and breeders of horses and mules. A railway to the Pacific, which previons to the discovery of the gold of California, was a dim vision of imaginative minds, is now become an urgent necessity. Somewhere on this long coast; a proper terminus must be found, such a terminus as will not merely gratify a local pride and promote personal or corporate interests, but one that shall be emphatically *American*, in its relation to the political and commercial interests of the whole country. The advocates of the most northern route from Chicago to the Pacific, claim that the Strait of De Fuca, both from position and the excellence of its harbors, furnishes the best site for the proposed terminus. A reference to the map will show at the extreme northwest corner of the Union this strait, ninety miles in length and eleven miles in width, uniting the waters of the Gulf of Georgia with the ocean, and separating the British Island of Vancouver from the Territory of Washington. Wilkes and other travelers represent the harbors of this strait as being both numerous and good. The surrounding country is well timbered and watered, and the supply of bituminous coal is inexhaustible. South of the Strait of De Fuca and separating the Territory of Washington from Oregon for nearly half their length, is the Columbia River, the great western river of the Union. For many years the shoals and sandbars at its entrance were regarded as presenting insurmountable difficulties to its ever becoming a great maritime station, but the recent discovery of a new and safe channel by which vessels may enter and leave the Columbia, has removed this objection,

and gives great importance to its claim to become the terminus proposed. The Bay of San Francisco which has shot up with magic growth from the insignificance of a mere loading-place for hides, into metropolitan importance, can claim the merit of an intermediate geographical position between De Fuca on the north and San Diego on the south. The excellence of its harbor is beyond all dispute. Abundance of water, facility of access, and capacity to receive and shelter all the fleets of the world, unite to make it, as a harbor, everything that the interests of the country require. The want of fertility in the surrounding country and the alleged difficulty of penetrating the rough country with a railroad, in the direct line to the East, are the chief objections urged to its fitness as the terminus of the road. San Diego, at the extreme southwestern limit of the Union, enjoys the advantage of lying in a milder climate than any of its competitors. The scarcity of wood, water and provisions, and its near vicinity to Mexico, detract much from the value which arises from the excellence of its harbor and its exemption from danger by storms.

A fifth point has sometimes been mentioned, the harbor of Humboldt, between San Francisco and the Columbia, but its inaccessibility in very bad weather necessarily dismisses its claim to regard. With the single exception of the nearness of the most northern route to the British possessions, there seems to be no insuperable objection to that course. The terminus at De Fuca Strait would bring the great Asiatic continent within a month's sail, at farthest, from the American coast. What now we are accustomed to regard as at a vast distance from our firesides and our sympathies, would soon be looked upon as we now look upon continental Europe. Strange as it may seem, New Orleans, twenty years ago, was farther from Boston than Jeddo in Japan will be from the same city twenty years hence. The consequences of this virtual compression of the earth into limits so much smaller than nature designed, cannot yet be estimated. Its influence upon the material interests of life, we may in a measure anticipate, but its bearing upon the diffusion of Christian civilization, upon the infusion of new elements into the petrifications of oriental life, and upon the final triumph of the Christian faith over barbarian superstition and the abominations of heathenism, time can alone determine. Whatever may be the ultimate decision of the public in relation to the point from which the first of American influence shall open upon the older continent, there is no doubt that local lines of railways will soon connect the different maritime cities of the Pacific coast and bind them together into a common interest. From the nature of the country west of the Rocky Mountains, it will need the entire agricultural resources of the whole to supply the natural demand of the commercial marine, which will soon whiten the Pacific with its sails. Not only will there be the business attracted to the country by one line of communication, but when this shall have been achieved, the rapid increase of trade and the development of

the internal resources of the country between the Mississippi and the Rocky Mountains, will call forth other enterprises that will connect Chicago at the north, St. Louis in the center and New Orleans on the south, with their several corresponding harbors on the Pacific.

When it was first proposed to connect Baltimore with the West by means of a railway, the apprehensions of the cities of the North were excited lest the great stream of western traffic should be permanently diverted to their irreparable injury. Instead of such result, we see the West connected with the East by numerous lines of travel, constantly increasing and uniting by almost direct routes every considerable city of the Atlantic coast, with every similar city of the vast West. Such will doubtless be the result of the growing importance of the Pacific slope of the Rocky Mountains. Not one, but several lines will unite the great traffic of the Pacific with the great traffic of the Atlantic. The dispute as to the location of the new road is therefore merely a dispute as to *priorities* of construction, and not at all as to the *permanent* course of the gigantic trade of the oriental world. Neither Chicago, St. Louis, Memphis, New Orleans, nor Galveston can ultimately be anything more than one of several terminations of the iron bonds that are perpetually to bind ocean to ocean. In this view, the importance of the question now agitating the extensive land speculators of the West, is of small importance to the country at large. The substantial benefits of the road will be the same to the country generally, whichever of the routes is ultimately decided upon. The aid of the government is unquestionably due to the *first* of these enterprises, inasmuch as one road has become indispensable for the security of the country and for the transport of troops, munitions of war, and for other general objects of the confederacy. The present condition of California, Utah, Oregon, and Washington already demand it; their prospective necessities will speedily render it imperative. In considering the claims of the several routes already proposed, the length of the road is of small comparative moment; yet with other things equal, this consideration must rule. The length of a direct line from the Strait of Juan De Fuca to Chicago is 1752 miles; from Astoria to the mouth of the Columbia River to the same city, is 1812 miles; from San Francisco to St. Louis is 1752 miles; from San Francisco to Walker's Pass is 375 miles, and thence to St. Louis 1532 miles more from Walker's Pass to Memphis 1604 miles, and from San Diego to New Orleans 1621 miles. These are distances in straight lines which, however, are in all cases absolutely impracticable for a road. An addition of from fifteen to twenty-three per cent. must be made in each of these cases to the length of the direct line.

The country intervening between the most western limits of civilization and the recently settled Territories on the Pacific, is confessedly little known. First penetrated by here and there a daring outcast or wanderer from the settled habitations of the Union, some

of whom lost their lives in the venture, some becoming incorporated with distant Indian tribes, and some few, taking to the business of regular professional guides, it naturally followed that a path once found across the immense wilds, the successive companies of adventurers would follow on in the same track. In this way, several passes through the long chains of mountains were long ago discovered. More recently, exploring parties invested with a public character have been sent out for the purpose of ascertaining the most direct and feasible passes across the lofty ranges of mountains that offer the chief difficulty to the construction of a direct railway. But at present, the real character of this vast intermediate country is little known, and if any decision is arrived at, before a thorough exploration of the mountain ranges has been made, it will be done ignorantly, and therefore, in all probability, imperfectly. The earliest, most persevering, and most intelligent of the public advocates of a trans-continental railway was Mr. Whitney. Session after session of Congress, he was present at Washington urging the practicability of a road and its vital importance to the commercial prosperity and the development of the resources of the Union. The usual fate of projectors of genius attended him. First derided, then gravely argued against, he finally succeeded in convincing the nation only that others might reap the credit and benefit of his suggestions. The route advocated by Mr. Whitney is one which would terminate at Puget Sound, leaving Wisconsin at Prairie du Chien—thence to the Valley of the White or White Earth River, a western tributary of the Missouri—thence to the Valley of Salmon River through the south pass of the Rocky Mountains, and so on down the Valley of the Lewis and Columbia Rivers to the Cascade Range of Mountains, where it leaves the Columbia in a direct line for Puget Sound. The objections urged to this route are substantially these: The difficulty and expense of constructing a road so circuitous as this must be through the Rocky Mountains and down the Salmon River, together with the cost of crossing the Mississippi and Missouri at points navigable for the larger class of steamers. The line is considerably longer than some of its competitors. The next route south, is that passed by the emigrants to Oregon. Leaving St. Louis, this route crosses the Missouri beyond its junction with the Kansas River, and strikes across to the Platte River, the valley of which it follows to the South Pass, thence across the headwaters of the Colorado to the Lewis and Columbia Rivers. The absence of timber on most of this route would prove an insuperable objection to its selection, even were it not ineligible from other considerations.

The route of all others the most eligible, on geographical grounds, would undoubtedly be one from San Francisco to St. Louis, were such a route a practical one. This, however, is stoutly contested, and the formation of the intermediate country, and the character of the mountain ranges to be crossed are deemed

to present insuperable difficulties to its construction. The papers of the day are, nevertheless, bringing us continual accounts of successful explorations to the east of San Francisco, showing the entire feasibility of a road crossing the Rocky Mountains almost in a straight line to St. Louis. The conclusions of one month are thus superseded by the conclusions of the next; the inaccessible peaks of one explorer become valleys or plains with another; and the barren desert of one account is clothed in another with huge forests and filled with perennial streams. The result to which we are compelled to come is, that in their anxiety to secure public favor to particular routes, men write about what they do not understand. Between the Mississippi and Missouri on the east, and the Rocky Mountains on the west, stretches an immense plateau of undulating land, penetrated in numerous places by deep ravines extending to the great rivers. The eastern portion of this plain is exceedingly fertile, and capable of sustaining a vast population. Its breadth cannot be less than two hundred and fifty or three hundred miles, which as a whole, is admirably adapted to the construction of a railway. The more western portion, adjacent to the Rocky Mountains, is represented as being sterile and barren, in many places destitute both of timber and of water, except such of the latter as is afforded by the larger streams which flow from the mountains. Beyond this plateau lie the Rocky Mountains which divide below Fremont's Peak in Utah, into two ranges, between which flow the waters of the Colorado, which discharges into the Gulf of California.

The eastern range, from latitude thirty-nine degrees north, is also accompanied by a third range farther to the east, the interval between the two supplying the waters of the Rio Grande, which separates the United States from Mexico. All three ranges pass under the common name of the Rocky Mountains. They are not high hills, but very substantial, rugged, rocky mountains, thinly covered with timber, irregular in form, and very unequal in elevation; some of these peaks rising to a height of 13,000 feet above the ocean's level, and covered with perpetual snow. The western range, which skirts the Great Salt Lake of Utah on the east, where it is known as the Wausatch Range, is more broken than the eastern range, though still high in places, and possessing many of its characteristics. From a point near the Vegas of Santa Clara, in latitude thirty-eight degrees north, this range pursues a westerly course until it strikes the lofty range of the Sierra Nevada in California, the latter of which bounds California on the west and can be penetrated at several points by railway. Most inconveniently in the way, however, for a direct line for a Pacific Road through the middle of the Union, lies a vast space, known as the Great American Basin, with a general elevation of from four to five thousand feet. The internal character of this alleged desert is little known. A final range of mountains, known as the Coast Range, also intervenes between the Pacific and the Sierra Nevada.

the valleys of which furnish the waters of the San Joaquin and the Sacramento Rivers, which unite their streams in the Bay of San Francisco, forming in their passage a pass through the range for a railway. Both slopes of the Nevada Mountains are covered with dense forests, which extend to the plains below on the ocean side. The same characteristics also pertain, in a measure, to the Coast Range south of San Francisco. The valley between the two is fertile and productive, but seems, from the scarcity of rains, to need some system of artificial irrigation, to secure its productiveness. The waters of the San Joaquin are fortunately ample for the purpose, and can be so used without extravagant expense.

A recent exploration, sent out from San Francisco to examine the Sierra Nevada, was successful in finding a pass almost due east from that city. Pursuing a nearly southeasterly course across the Great Basin for a distance of nearly three hundred miles, they found their route to be mainly a succession of fertile valleys, entirely favorable for a railroad. They had nearly reached the "Vegas of Santa Clara," and had before them a long vista of a level valley, when they were attacked by the Indians and forced to return. It seems probable that this capital condition of the country extends to the newly-discovered Ebbet's Pass. At this point the route intersects that advocated by Colonel Benton, leading from the Coochatope River to Walker's Pass. From the Vegas to the Coochatope, the country, as described by explorers, is generally level and fertile, watered by numerous small streams, tributaries of Green and Grand Rivers. This route from the Sierra Nevada to the Rocky Mountains, is described as being susceptible of a high state of cultivation, through its entire length. Should the route by Ebbet's Pass be found, on further examination, to be a practicable one, it will necessarily supersede Colonel Benton's route from the Vegas to Walker's Pass, inasmuch as the latter is confessedly almost or altogether barren, much broken by mountains and hills, beside making the distance to San Francisco at least a hundred miles farther. Many surveys, however, must be made before the country will be satisfied of the wisdom of making appropriations for any particular route, which must involve an expense of at least a hundred millions of dollars before its completion.

Wearied with the delay incident to a government appropriation for this project, individual capitalists, particularly those of the South, are earnestly considering the propriety of a road to connect San Diego with Charleston, in South Carolina. A reference to the map will show that the two cities are nearly on the same parallel of latitude. From Charleston to Shreveport, in Louisiana, a line of railway connection already exists, or is in a state of progress. The offer of alternate sections of land from Marshall on the eastern limit of Texas to its western border, through the best lands of the State, presents a strong inducement to capitalists to

construct such a road. From the west limit of Texas to the of El Paso, exists a practicable pass through the Rocky Mountains. From El Paso to the headwaters of the River Gila, is a practicable route for a railway without any considerable deviation from a west course; and from the head of the Gulf of California, where it receives the Gila, to San Diego, the route presents no formidable difficulties. Although no serious objection appears to exist to the prosecution of this enterprise, yet further consideration may diminish the confidence with which the project is regarded. The gradual progress of public sentiment, as it becomes enlightened by a better acquaintance with the facts of the case, will in a few years at farthest, determine definitely the course which this great achievement of modern science and enterprise must pursue.
